## PROGRAMME OUTCOMES (PO):

At the end of the graduate programme at Farook College (Autonomous), Kozhikode a student would:

|     |  |
|-----|--|
| PO1 | Knowledge Acquisition:<br>Demonstrate a profound understanding of knowledge trends and their impact on the chosen discipline of study.   |
| PO2 | Communication, Collaboration, Inclusiveness, and Leadership:<br>Become a team player who drives positive change through effective communication, collaborative acumen, transformative leadership, and a dedication to inclusivity.                                       |
| PO3 | Professional Skills:<br>Demonstrate professional skills to navigate diverse career paths with confidence and adaptability.   |
| PO4 | Digital Intelligence:<br>Demonstrate proficiency in varied digital and technological tools to understand and interact with the digital world, thus effectively processing complex information.   |
| PO5 | Scientific Awareness and Critical Thinking:<br>Emerge as an innovative problem-solver and impactful mediator, applying scientific understanding and critical thinking to address challenges and advance sustainable solutions.   |
| PO6 | Human Values, Professional Ethics, and Societal and Environmental Responsibility:<br>Become a responsible leader, characterized by an unwavering commitment to human values, ethical conduct, and a fervent dedication to the well-being of society and the environment. |
| PO7 | Research, Innovation, and Entrepreneurship:<br>Emerge as a researcher and entrepreneurial leader, forging collaborative partnerships with industry, academia, and communities to contribute enduring solutions for local, regional, and global development.              |

## PROGRAMME SPECIFIC OUTCOMES (PSO):

At the end of the BSc Chemistry Honours programme at Farook College (Autonomous), a student would:

|      |   |
|------|---|
| PSO1 | Understand theoretical concepts and applications across major chemistry subfields, including inorganic, organic, physical, analytical chemistry, and quantum mechanics. |
| PSO2 | Evaluate complex chemical phenomena and real-world problems by applying principles of theoretical chemistry and computational chemistry.                                |
| PSO3 | Develop practical skills in handling chemicals safely, preparing solutions, conducting experiments, and analyzing chemical species in the lab.                          |

|      |   |
|------|---|
| PSO4 | Design and execute a project to solve real world problems following the needs of society and academic research within a stipulated time frame.  |
| PSO5 | Acquire foundational knowledge of chemistry essential for advanced studies in interdisciplinary fields such as Physics, Mathematics, Botany, Zoology, Geology, and other related disciplines. |
| PSO6 | Apply chemistry knowledge to various industries including pharmaceuticals, materials science, energy, polymer, and environmental monitoring.  |

**MINIMUM CREDIT REQUIREMENTS OF THE DIFFERENT PATHWAYS  
IN THE THREE-YEAR PROGRAMME IN CUFYUGP**

\* The teacher should have 13 hrs/week of engagement (the hours corresponding to the three core courses) in the guidance of the Project(s) in Honours programme and Honours with Research programme, while each student should have 24 hrs/week of engagement in the Project work. Total hours are given based on the student's engagement.

### CREDIT DISTRIBUTION FOR PATHWAYS 1 – 4

1. Single Major

2. Major with Multiple Disciplines

3. Major with Minor

4. Major with Vocational Minor

| Semester                         | Major Courses        | Minor Courses | General Foundation Courses | Internship/ Project | Total      |
|----------------------------------|----------------------|---------------|----------------------------|---------------------|------------|
| 1                                | 4                    | 4 + 4         | 3 + 3 + 3                  | -                   | 21         |

|           | 3                           | FCBSCH<br>E3VN202 | PLASTICS AND FIBER<br>TECHNOLOGY           | 3        | 75        | 5        | 4       | 30       | 70       | 100   |
|           | 4                           | FCBSCH<br>E8VN302 | POLYMER IN<br>INDUSTRY                     | 8        | 60        | 4        | 4       | 30       | 70       | 100   |

(i). Students in Single Major pathway can choose course/courses from any of the Minor/ Vocational Minor groups offered by a discipline other than their Major discipline.

(ii). Students in Major with Multiple Disciplines pathway can choose all the three courses from any one of the Minor/ Vocational Minor groups offered by any discipline, other than his Major discipline as one of the multiple disciplines.

(iii). Students in Major with Minor pathway can choose all the courses from any two Minor groups offered by any discipline. Students in Major with Vocational Minor pathway can choose all the courses from any two Vocational Minor groups offered by any discipline. If the students choose any two Vocational Minor groups in Chemistry as given above, then the title of the Vocational Minor will be **Chemistry in Technology**

### DISTRIBUTION OF GENERAL FOUNDATION COURSES IN CHEMISTRY

| Sem ester  | Course Code    | COURSE TITLE  | Total Hours | Hours/ Week | Credits | Marks     |           |       |
|--|----------------|---|-------------|-------------|---------|-----------|-----------|-------|
|  |                |   |             |             |         | Inter nal | Exter nal | Total |
| 1  | FCBSCH E1FM105 | MULTI-DISCIPLINARY COURSE 1 – ENVIRONMENTAL CHEMISTRY | 45          | 3           | 3       | 25        | 50        | 75    |
| 2  | FCBSCH E2FM106 | MULTI-DISCIPLINARY COURSE 2 – CHEMISTRY IN DAILY LIFE | 45          | 3           | 3       | 25        | 50        | 75    |
| 3  | FCBSCH E3FV108 | VALUE-ADDED COURSE 1 – CHEMISTRY OF CONSUMER PRODUCTS | 45          | 3           | 3       | 25        | 50        | 75    |
| 4  | FCBSCH E4FV109 | VALUE-ADDED COURSE 2 – SOLID WASTE MANAGEMENT         | 45          | 3           | 3       | 25        | 50        | 75    |
| 5  |                | SKILL ENHANCEMENT COURSE 2*                           |             |             |         |           |           |       |
|  | FCBSCH E5FS112 | CHEMISTRY IN EVERYDAY LIFE                            | 45          | 3           | 3       | 25        | 50        | 75    |

| *Among the two Skill Enhancement Courses, one course can be selected in the Sixth semester |  |    |   |   |    |    |    |

**COURSE STRUCTURE FOR BATCH A1(B2)  
IN PATHWAY 5: DOUBLE MAJOR**

*A1: 68 credits in Chemistry (Major A)*

*B1: 68 credits in Major B*

*A2: 53 credits in Chemistry (Major A)*

*B2: 53 credits in Major B*

*The combinations available to the students: (A1 & B2), (B1 & A2)*

*Note: Unless the batch is specified, the course is for all the students of the class*

**COURSE STRUCTURE FOR BATCH B1(A2)  
IN PATHWAY 5: DOUBLE MAJOR**

*A1: 68 credits in Chemistry (Major A)*

*B1: 68 credits in Major B*

*A2: 53 credits in Chemistry (Major A)*

*B2: 53 credits in*

*Major B*

*The combinations available to the students: (A1 & B2), (B1 & A2)*

*Note: Unless the batch is specified, the course is for all the students of the class*

To continue to study Chemistry in semesters 7 and 8, batch B1(A2) needs to earn additional 15 credits in Chemistry to make the total credits of 68. Suppose this condition is achieved, and the student of batch B1(A2) proceeds to the next semesters to study Chemistry. The course structure in semesters 7 and 8 is the same as for pathways 1 – 4, except that the number of the core and elective courses is in continuation of the number of courses in the two categories completed at the end of semester 6, taking into account the number of courses in Chemistry taken online to earn the additional 15 credits.

\* The course code of the same course as used for the pathways 1 – 4

### CREDIT DISTRIBUTION FOR BATCH B1(A2) IN PATHWAY 5: DOUBLE MAJOR

| Semester                         | Major Courses in B   | General Foundation Courses in B | Internship/ Project in B | Major Courses in Chemistry | General Foundation Courses in Chemistry | AEC       | Total      |
|----------------------------------|----------------------|---------------------------------|--------------------------|----------------------------|---|-----------|------------|
| 1                                | 4 + 4                | 3                               | -                        | 4                          | -                                       | 3 + 3     | 21         |
| 2                                | 4                    | -                               | -                        | 4 + 4                      | 3                                       | 3 + 3     | 21         |

### EVALUATION SCHEME

1. The evaluation scheme for each course contains two parts: internal evaluation (about 30%) and external evaluation (about 70%). Each of the Major and Minor courses is of 4-credits. It is evaluated for 100 marks, out of which 30 marks is from internal

evaluation and 70 marks, from external evaluation. Each of the General Foundation course is of 3-credits. It is evaluated for 75 marks, out of which 25 marks is from internal evaluation and 50 marks, from external evaluation.

2. The 4-credit courses (Major and Minor courses) are of two types: (i) courses with only theory and (ii) courses with 3-credit theory and 1-credit practical.
  - In 4-credit courses with only theory component, out of the total 5 modules of the syllabus, one open-ended module with 20% content is designed by the faculty member teaching that course, and it is internally evaluated for 10 marks. The internal evaluation of the remaining 4 theory modules is for 20 marks.
  - In 4-credit courses with 3-credit theory and 1-credit practical components, out of the total 5 modules of the syllabus, 4 modules are for theory and the fifth module is for practical. The practical component is internally evaluated for 20 marks. The internal evaluation of the 4 theory modules is for 10 marks.
3. All the 3-credit courses (General Foundational Courses) in chemistry are with only theory component. Out of the total 5 modules of the syllabus, one open-ended module with 20% content is designed by the faculty member teaching that course, and it is internally evaluated for 5 marks. The internal evaluation of the remaining 4 theory modules is for 20 marks.

| Sl. No. | Nature of the Course |                                | Internal Evaluation in Marks (about 30% of the total) |                        | External Exam on 4 modules (Marks) | Total Marks |
|---------|----------------------|--------------------------------|---|------------------------|------------------------------------|-------------|
|         |                      |                                | Open-ended module / Practical                         | On the other 4 modules |                                    |             |
| 1       | 4-credit course      | only theory (5 modules)        | 10  | 20                     | 70                                 | 100         |
| 2       | 4-credit course      | Theory (4 modules) + Practical | 20  | 10                     | 70                                 | 100         |
| 3       | 3-credit course      | only theory (5 modules)        | 5   | 20                     | 50                                 | 75          |

## 1. MAJOR AND MINOR COURSES

### 1.1. INTERNAL EVALUATION OF THEORY COMPONENT

| Sl. No. | Components of Internal Evaluation of Theory Part of a Major / Minor Course | Internal Marks for the Theory Part of a Major / Minor Course of 4-credits |                   |                    |           |
|---------|--|---|-------------------|--------------------|-----------|
|         |  | Theory Only   |                   | Theory + Practical |           |
|         |  | 4 Theory Modules  | Open-ended Module | 4 Theory Modules   | Practical |
| 1       | Test paper/<br>Mid-semester Exam   | 10  | 4                 | 5                  | -         |
| 2       | Seminar/ Viva/ Quiz  | 6   | 4                 | 3                  | -         |
| 3       | Assignment   | 4   | 2                 | 2                  | -         |
| Total   |  | 20  | 10                | 10                 | 20*       |
|         |  | 30  |                   | 30                 |           |

\* Refer the table in section 1.2 for the evaluation of practical component

## 1.2. EVALUATION OF PRACTICAL COMPONENT

The evaluation of practical component in Major and Minor courses is completely by internal evaluation.

- Continuous evaluation of practical by the teacher-in-charge shall carry a weightage of 50%.
- Combining the rough and fair records into a single record for lab experiments is sufficient; there's no need to maintain them separately. The consolidated record can be submitted for evaluation at the end of the semester.
- The end-semester practical examination and viva-voce, and the evaluation of practical records shall be conducted by the teacher in-charge and an internal examiner appointed by the Department Council.
- The process of continuous evaluation of practical courses shall be completed before 10 days from the commencement of the end-semester examination.
- Those who have done 75% of the experiments alone will be permitted to appear for the end-semester examination and viva-voce.

The scheme of continuous evaluation and the end-semester examination and viva-voce of practical component shall be as given below:

| Sl. No.     | Evaluation of Practical Component of Credit-1 in a Major / Minor Course  | Marks for Practical | Weightage |
|-------------|--|---------------------|-----------|
| 1           | Continuous evaluation of practical/ exercise performed in practical classes by the students. (Performance in the lab - 7 Marks, Attendance in the lab - 3 Marks) | 10                  | 50%       |
| 2           | Evaluation of the Practical records submitted for the end semester viva-voce examination by the teacher-in-charge and additional examiner                        | 3                   | 15%       |
| 3           | End-semester examination and viva-voce to be conducted by teacher-in-charge along with an additional examiner arranged internally by the Department Council      | 7                   | 35%       |
| Total Marks |  | 20                  |           |

### 1.3. EXTERNAL EVALUATION OF THEORY COMPONENT

External evaluation carries 70% marks. Examinations will be conducted at the end of each semester. Individual questions are evaluated in marks and the total marks are converted into grades by the University based on 10-point grading system (refer section 5).

#### PATTERN OF QUESTION PAPER FOR MAJOR AND MINOR COURSES

| Duration    | Type               | Total No. of Questions | No. of Questions to be Answered | Marks for Each Question | Ceiling of Marks |
|-------------|--------------------|------------------------|---------------------------------|-------------------------|------------------|
| 2 Hours     | Short Answer       | 10                     | 8 – 10                          | 3                       | 24               |
|             | Paragraph/ Problem | 8                      | 6 – 8                           | 6                       | 36               |
|             | Essay              | 2                      | 1                               | 10                      | 10               |
| Total Marks |                    |                        |                                 |                         | 70               |

## 2. INTERNSHIP

- All students should undergo Internship of 2-credits during the first six semesters in a firm, industry or organization, or training in labs with faculty and researchers of their own institution or other Higher Educational Institutions (HEIs) or research institutions.
- Internship can be for enhancing the employability of the student or for developing the research aptitude.

- Internship can involve hands-on training on a particular skill/ equipment/ software. It can be a short project on a specific problem or area. Attending seminars or workshops related to an area of learning or skill can be a component of Internship.
- A faculty member/ scientist/ instructor of the respective institution, where the student does the Internship, should be the supervisor of the Internship.

## **2.1. GUIDELINES FOR INTERNSHIP**

1. Internship can be in Chemistry or allied disciplines.
2. There should be minimum 60 hrs. of engagement from the student in the Internship.
3. Summer vacations and other holidays can be used for completing the Internship.
4. In BSc. Chemistry Honours programme, institute/ industry visit or study tour is a requirement for the completion of Internship. Visit to minimum one national research institute, research laboratory and place of scientific importance should be part of the study tour. A brief report of the study tour has to be submitted with photos and analysis.
5. The students should make regular and detailed entries in to a personal log book through the period of Internship. The log book will be a record of the progress of the Internship and the time spent on the work, and it will be useful in writing the final report. It may contain experimental conditions and results, ideas, mathematical expressions, rough work and calculation, computer file names etc. All entries should be dated. The Internship supervisor should periodically examine and countersign the log book.
6. The log book and the typed report must be submitted at the end of the Internship.
7. The institution at which the Internship will be carried out should be prior-approved by the Department Council of the college where the student has enrolled for the UG Honours programme.

## **2.2. EVALUATION OF INTERNSHIP**

- The evaluation of Internship shall be done internally through continuous assessment mode by a committee internally constituted by the Department Council of the college where the student has enrolled for the UG Honours programme.
- The credits and marks for the Internship will be awarded only at the end of semester 6.
- The scheme of continuous evaluation and the end-semester viva-voce examination based on the submitted report shall be as given below:

| Sl. No.     | Components of Evaluation of Internship   |                                    | Marks for Internship<br>2 Credits | Weightage |
|-------------|--|------------------------------------|-----------------------------------|-----------|
| 1           | Continuous evaluation of internship through interim presentations and reports by the committee internally constituted by the Department Council  | Acquisition of skill set           | 10                                | 40%       |
| 2           |  | Interim Presentation and Viva-voce | 5                                 |           |
| 3           |  | Punctuality and Log Book           | 5                                 |           |
| 4           | Report of Institute Visit/ Study Tour  |                                    | 5                                 | 10%       |
| 5           | End-semester viva-voce examination to be conducted by the committee internally constituted by the Department Council   | Quality of the work                | 6                                 | 35%       |
| 6           |  | Presentation of the work           | 5                                 |           |
| 7           |  | Viva-voce                          | 6                                 |           |
| 8           | Evaluation of the day-to-day records, the report of internship supervisor, and final report submitted for the end semester viva-voce examination before the committee internally constituted by the Department Council |                                    | 8                                 | 15%       |
| Total Marks |  |                                    | 50                                |           |

### 3. PROJECT

#### 3.1. PROJECT IN HONOURS PROGRAMME

- In Honours programme, the student has the option to do a Project of 12-credits instead of three Core Courses in Major in semester 8.
- The Project can be done in the same institution / any other higher educational institution (HEI) / research centre/ training centre.
- The project in Honours programme can be a short research work or an extended internship or a skill-based training programme.
- A faculty member of the respective institution, where the student does the Project, should be the supervisor of the Project.

#### 3.2. PROJECT IN HONOURS WITH RESEARCH PROGRAMME

- Students who secure 75% marks and above (equivalently, CGPA 7.5 and above) cumulatively in the first six semesters are eligible to get selected to Honours with Research stream in the fourth year.
- A relaxation of 5% in marks (equivalently, a relaxation of 0.5 grade in CGPA) is allowed for those belonging to SC/ST/OBC (non-creamy layer)/ Differently-

Abled/Economically Weaker Section (EWS)/ other categories of candidates as per the decision of the UGC from time to time.

- In Honours with Research programme, the student has to do a mandatory Research Project of 12-credits instead of three core courses in Major in semester 8.
- The approved research centres of Farook College (Autonomous) or any other university/ HEI can offer the Honours with Research programme. The departments in the affiliated colleges under Farook College (Autonomous), which are not the approved research centres of the University, should get prior approval from the University to offer the Honours with Research programme. Such departments should have minimum two faculty member with Ph.D., and they should also have the necessary infrastructure to offer Honours with Research programme.
- A faculty member of the University/ College with a Ph.D. degree can supervise the research project of the students who have enrolled for Honours with Research. One such faculty member can supervise maximum five students in Honours with Research stream.
- The maximum intake of the department for Honours with Research programme is fixed by the department based on the number of faculty members eligible for project supervision, and other academic, research and infrastructural facilities available.
- If a greater number of eligible students are opting for the Honours with Research programme than the number of available seats, then the allotment shall be based on the existing rules of reservations and merits.

### **3.3. GUIDELINES FOR THE PROJECT IN HONOURS PROGRAMME AND HONOURS WITH RESEARCH PROGRAMME**

1. Project can be in Chemistry or allied disciplines.
2. Project should be done individually.
3. Project work can be of experimental/ theoretical/ computational in nature.
4. There should be minimum 360 hrs. of engagement from the student in the Project work in Honours programme as well as Honours with Research programme
5. There should be minimum 13 hrs./ week of engagement (the hours corresponding to the three core courses in Major in semester 8) from the teacher in the guidance of the Project(s) in Honours programme and Honours with Research programme
6. The various steps in project works are the following:
  - Wide review of a topic.

- Investigation on a problem in systematic way using appropriate techniques.
  - Systematic recording of the work.
  - Reporting the results with interpretation in a standard documented form.
  - Presenting the results before the examiners.
7. During the Project the students should make regular and detailed entries in to a personal log book through the period of investigation. The log book will be a record of the progress of the Project and the time spent on the work, and it will be useful in writing the final report. It may contain experimental conditions and results, ideas, mathematical expressions, rough work and calculation, computer file names etc. All entries should be dated. The Project supervisor should periodically examine and countersign the log book.
  8. The log book and the typed report must be submitted at the end of the Project. A copy of the report should be kept for reference at the department. A soft copy of the report too should be submitted, to be sent to the external examiner in advance.
  9. It is desirable, but not mandatory, to publish the results of the Project in a peer reviewed journal.
  10. The project report shall have an undertaking from the student and a certificate from the research supervisor for originality of the work, stating that there is no plagiarism, and that the work has not been submitted for the award of any other degree/ diploma in the same institution or any other institution.
  11. The project proposal, institution at which the project is being carried out, and the project supervisor should be prior-approved by the Department Council of the college where the student has enrolled for the UG Honours programme.

### **3.4. EVALUATION OF PROJECT**

- The evaluation of Project will be conducted at the end of the eighth semester by both internal and external modes.
- The Project in Honours programme as well as that in Honours with Research programme will be evaluated for 300 marks. Out of this, 90 marks is from internal evaluation and 210 marks, from external evaluation.
- The Project in Honours with Research programme will be evaluated for 300 marks. Out of this, 90 marks is from internal evaluation and 210 marks, from external evaluation.

- The internal evaluation of the Project work shall be done through continuous assessment mode by a committee internally constituted by the Department Council of the college where the student has enrolled for the UG Honours programme. 30% of the weightage shall be given through this mode.
- The remaining 70% shall be awarded by the external examiner appointed by the University.
- The scheme of continuous evaluation and the end-semester viva-voce of the Project shall be as given below:

| Components of Evaluation of Project   | Marks for the Project (Honours/ Honours with Research) | Weightage |
|---|--|-----------|
| Continuous evaluation of project work through interim presentations and reports by the committee internally constituted by the Department Council | 90   | 30%       |
| End-semester viva-voce examination to be conducted by the external examiner appointed by the university   | 150  | 50%       |
| Evaluation of the day-to-day records and project report submitted for the end-semester viva-voce examination conducted by the external examiner   | 60   | 20%       |
| Total Marks   | 300  |           |

#### **INTERNAL EVALUATION OF PROJECT**

| Sl. No      | Components of Evaluation of Project    | Marks for the Project (Honours / Honours with Research programme) |
|-------------|--|---|
| 1           | Skill in doing project work            | 30  |
| 2           | Interim Presentation and Viva-Voce     | 20  |
| 3           | Punctuality and Log book               | 20  |
| 4           | Scheme/ Organization of Project Report | 20  |
| Total Marks |  | 90  |

#### **EXTERNAL EVALUATION OF PROJECT**

| Sl. No | Components of Evaluation of Project | Marks for the Project |
|--------|-------------------------------------|-----------------------|
|--------|-------------------------------------|-----------------------|

|             |   |   |
|-------------|---|---|
|             |   | (Honours / Honours with Research programme) |
| 1           | Content and relevance of the Project, Methodology, Quality of analysis, and Innovations of Research | 50  |
| 2           | Presentation of the Project   | 50  |
| 3           | Project Report (typed copy), Log Book and References  | 60  |
| 4           | Viva-Voce   | 50  |
| Total Marks |   | 210   |

#### 4. GENERAL FOUNDATION COURSES

- All the General Foundation Courses (3-credits) in Chemistry are with only theory component.

##### 4.1. INTERNAL EVALUATION

| Sl. No. | Components of Internal Evaluation of a General Foundation Course in Chemistry | Internal Marks of a General Foundation Course of 3-credits in Chemistry |                   |
|---------|---|---|-------------------|
|         |   | 4 Theory Modules  | Open-ended Module |
| 1       | Test paper/ Mid-semester Exam   | 10  | 2                 |
| 2       | Seminar/ Viva/ Quiz   | 6   | 2                 |

| Total   |   | 20  | 5                 |
|         |   | 25  |                   |

##### 4.2. EXTERNAL EVALUATION

External evaluation carries about 70% marks. Examinations will be conducted at the end of each semester. Individual questions are evaluated in marks and the total marks are converted into grades by the University based on 10-point grading system (refer section 5).

#### PATTERN OF QUESTION PAPER FOR GENERAL FOUNDATION COURSES

| Duration | Type | Total No. of Questions | No. of Questions to be Answered | Marks for Each Question | Ceiling of Marks |
|----------|------|------------------------|---------------------------------|-------------------------|------------------|
|----------|------|------------------------|---------------------------------|-------------------------|------------------|

|             |                    |    |        |    |    |
|-------------|--------------------|----|--------|----|----|
| 1.5 Hours   | Short Answer       | 10 | 8 – 10 | 2  | 16 |
|             | Paragraph/ Problem | 5  | 4 – 5  | 6  | 24 |
|             | Essay              | 2  | 1      | 10 | 10 |
| Total Marks |                    |    |        |    | 50 |

## 5.LETTER GRADES AND GRADE POINTS

- Mark system is followed for evaluating each question.
- For each course in the semester letter grade and grade point are introduced in 10-point indirect grading system as per guidelines given below.
- The Semester Grade Point Average (SGPA) is computed from the grades as a measure of the student's performance in a given semester.
- The Cumulative GPA (CGPA) is based on the grades in all courses taken after joining the programme of study.
- Only the weighted grade point based on marks obtained shall be displayed on the grade card issued to the students.

### LETTER GRADES AND GRADE POINTS

| Sl. No. | Percentage of Marks (Internal & External Put Together)  | Description   | Letter Grade | Grade Point | Range of Grade Points | Class                        |
|---------|---|---------------|--------------|-------------|-----------------------|------------------------------|
| 1       | 95% and above   | Outstanding   | O            | 10          | 9.50 – 10             | First Class with Distinction |
| 2       | Above 85% and below 95%   | Excellent     | A+           | 9           | 8.50 – 9.49           |                              |
| 3       | 75% to below 85%  | Very Good     | A            | 8           | 7.50 – 8.49           |                              |
| 4       | 65% to below 75%  | Good          | B+           | 7           | 6.50 – 7.49           | First Class                  |
| 5       | 55% to below 65%  | Above Average | B            | 6           | 5.50 – 6.49           |                              |
| 6       | 45% to below 55%  | Average       | C            | 5           | 4.50 – 5.49           | Second Class                 |
| 7       | 35% to below 45% aggregate (internal and external put together) with a minimum of 30% in external valuation | Pass          | P            | 4           | 3.50 – 4.49           | Third Class                  |
| 8       | Below an aggregate of 35% or below 30% in external evaluation   | Fail          | F            | 0           | 0 – 3.49              | Fail                         |
| 9       | Not attending the examination   | Absent        | Ab           | 0           | 0                     | Fail                         |

- When students take audit courses, they will be given Pass (P) or Fail (F) grade without any credits.
- The successful completion of all the courses and capstone components prescribed for the three-year or four-year programme with 'P' grade shall be the minimum requirement for the award of UG Degree or UG Degree Honours or UG Degree Honours with Research, as the case may be.

### 5.1. COMPUTATION OF SGPA AND CGPA

- The following method shall be used to compute the Semester Grade Point Average (SGPA):

The SGPA equals the product of the number of credits ( $C_i$ ) with the grade points ( $G_i$ ) scored by a student in each course in a semester, summed over all the courses taken by a student in the semester, and then divided by the total number of credits of all the courses taken by the student in the semester,

$$\text{i.e. SGPA } (S_i) = \frac{\sum_i (C_i \times G_i)}{\sum_i (C_i)}$$

where  $C_i$  is the number of credits of the  $i^{\text{th}}$  course and  $G_i$  is the grade point scored by the student in the  $i^{\text{th}}$  course in the given semester. Credit Point of a course is the value obtained by multiplying the credit ( $C_i$ ) of the course by the grade point ( $G_i$ ) of the course.

$$\text{SGPA} = \frac{\text{Sum of the credit points of all the courses in a semester}}{\text{Total credits in that semester}}$$

#### ILLUSTRATION – COMPUTATION OF SGPA

| Semester | Course   | Credit | Letter Grade | Grade point | Credit Point<br>(Credit x Grade) |
|----------|----------|--------|--------------|-------------|----------------------------------|
| I        | Course 1 | 3      | A            | 8           | 3 x 8 = 24                       |
| I        | Course 2 | 4      | B+           | 7           | 4 x 7 = 28                       |
| I        | Course 3 | 3      | B            | 6           | 3 x 6 = 18                       |
| I        | Course 4 | 3      | O            | 10          | 3 x 10 = 30                      |
| I        | Course 5 | 3      | C            | 5           | 3 x 5 = 15                       |
| I        | Course 6 | 4      | B            | 6           | 4 x 6 = 24                       |
|          | Total    | 20     |              |             | 139                              |
|          | SGPA     |        |              |             | 139/20 = 6.950                   |

- The Cumulative Grade Point Average (CGPA) of the student shall be calculated at the end of a programme. The CGPA of a student determines the overall academic level of the student in a programme and is the criterion for ranking the students.

CGPA for the three-year programme in CUFYUGP shall be calculated by the following formula.

$$\text{CGPA} = \frac{\text{Sum of the credit points of all the courses in six semesters}}{\text{Total credits in six semesters (133)}}$$

CGPA for the four-year programme in CUFYUGP shall be calculated by the following formula.

$$\text{CGPA} = \frac{\text{Sum of the credit points of all the courses in eight semesters}}{\text{Total credits in eight semesters (177)}}$$

- The SGPA and CGPA shall be rounded off to three decimal points and reported in the transcripts.
- Based on the above letter grades, grade points, SGPA and CGPA, the University shall issue the transcript for each semester and a consolidated transcript indicating the performance in all semesters.

**Detailed Syllabus:**

| Module   | Unit   | Content  | Hrs<br>(45+30) | Marks     |
|----------|--|--|----------------|-----------|
| <b>I</b> | <b>CHEMISTRY AS A SCIENCE DISCIPLINE &amp; SCIENTIFIC ANALYSIS</b> |  | <b>8</b>       | <b>17</b> |
|          | 1  | Science- Chemistry as a branch of science, History of chemistry, Involvement of chemistry in daily life (Mention only)                                 | <b>1</b>       |           |
|          | 2  | Introduction to analytical chemistry, Classification of analytical methods: Qualitative and Quantitative analysis (Mention with examples)              | <b>1</b>       |           |
|          | 3  | Treatment of analytical data - Significant figures – Accuracy – Precision – Methods of representing Accuracy, Absolute error, Relative error, Types of | <b>3</b>       |           |

|            |   |  |           |           |
|------------|---|--|-----------|-----------|
|            |   | errors, Constant errors, Proportional errors, Correction of determinate errors   |           |           |
|            | 4   | Methods of representing Precision –Mean, Average deviation, Standard deviation, Relative standard deviation, Coefficient of variation, Variance, Rejection of a result: Q test, Methods of least squares   | 3         |           |
| <b>II</b>  | <b>CHEMICAL BONDING AND MOLECULAR STRUCTURE</b> |  | <b>17</b> | <b>38</b> |
|            | 5   | Periodic Properties and their Periodic Trends: (a) Atomic and Ionic radius (include isoelectronic species in discussion) (b) Ionisation energy: (c) Electron affinity (d) Electronegativity (Pauling, Mulliken Allred & Rochow scales).                                  | 2         |           |
|            | 6   | Classification of bonds: Ionic bond - Definition, Factors affecting the formation of ionic bond. Characteristics of ionic compounds. Lattice energy  | 1         |           |
|            | 7   | Born Haber cycle - Born Lande equation (derivation not needed) - Covalent –(Mention polar and non polar compounds) and Coordinate bond   | 2         |           |
|            | 8   | Dipole moment and its applications: (Prediction of linearity and symmetry of polyatomic molecules, Prediction of position of substituents in aromatic compounds, Measurement of bond angle)  | 2         |           |
|            | 9   | Covalent Bond, Lewis concept of covalent bond, Atomic orbital overlap, Concept of covalency, Variable covalency and Maximum covalency  | 2         |           |
|            | 10  | Prediction of Covalent character in ionic bond using Fajans rule. Prediction of Ionic character in Covalent bond using Hannary Smidth equation.  | 1         |           |
|            | 11  | Structure of molecules by the concept of Hybridisation: $\text{NO}_3^-$ , $\text{CO}_3^{2-}$ , $\text{SO}_4^{2-}$ , $\text{IF}_7$ , $\text{XeO}_3$ , $\text{XeO}_4$ , $\text{XeF}_2$ , $\text{XeF}_4$ , $\text{XeF}_6$ , $\text{ClF}_3$ , $\text{BrF}_5$ , $\text{SF}_4$ | 3         |           |
|            | 12  | Introductory MO Theory: Homoatomic molecules in $\text{N}_2$ and $\text{O}_2$ and their ions (comparison of bond order, bond length and stability), MO Theory: Heteroatomic molecules like NO, CO, HCl, HF, LiF.   | 4         |           |
| <b>III</b> | <b>INTRODUCTION TO NANOMATERIALS</b>            |  | <b>10</b> | <b>21</b> |
|            | 13  | Definition of Nanomaterials, Historical revolution of Nanochemistry, Nanochemistry and Nanotechnology, Classification of nanostructures based on electron confinement (0D, 1D and 2D)  | 2         |           |

|           |   |  |           |           |
|-----------|---|--|-----------|-----------|
|           | 14  | Synthesis of Nanomaterials: Bottom Up and Top down approaches (Elementary idea with examples)  | <b>1</b>  |           |
|           | 15  | Metal nanoparticles (gold and silver nanoparticles), Semiconductor nanoparticles (CdS and CdSe nanoparticles), Metal oxide nanoparticles (zinc oxide, iron oxide, silica and titania nanoparticles), Nanocomposites, Nanoceramics (Definition with examples), Carbon Based Nanomaterials: Graphene, Carbon Nanotubes, Fullerenes, Carbon dots (elementary idea only) | <b>2</b>  |           |
|           | 16  | Characteristics of Nanomaterials: Surface area to volume ratio and its significance, Novel properties of Nanomaterials, Size dependent optical (surface plasmon resonance), Electronic, Mechanical, magnetic and catalytic properties (No deep discussion is needed)   | <b>3</b>  |           |
|           | 17  | Applications of nanomaterials: Electronics (Batteries, Solar cell), Biomedical (Drug Delivery) and Environmental based applications (Water Purification, Dye Removal) (General idea only)  | <b>2</b>  |           |
| <b>IV</b> | <b>FUNDAMENTALS OF ANALYTICAL CHEMISTRY</b> |  | <b>10</b> | <b>22</b> |
|           | 18  | Lab safety measurements: Awareness of material safety data sheet (MSDS), Safe storage and handling of hazardous chemicals, Simple first aids; Electric shocks, fire, Cut by glass and inhalation of poisonous gas.   | <b>2</b>  |           |
|           | 19  | Accidents due to acids and alkalis, Burns due to phenol and bromine, Disposal of waste chemicals, Disposal of sodium and broken mercury thermometer, -R and S phrases (elementary idea only), Personal protective Equipment (PPE)  | <b>1</b>  |           |
|           | 20  | Mole concept - Equivalent mass - Methods of expressing concentration: Weight percentage, molality, molarity, normality, mole fraction, ppm and millimoles - Numerical Problems related to basic concepts.  | <b>2</b>  |           |
|           | 21  | Volumetric Analysis: Introduction - Primary and secondary standards – Standard solutions – Theory of titrations involving acids and bases, Permanganometry, Dichrometry, Iodometry, Iodimetry Precipitation and Complexometric titrations.   | <b>3</b>  |           |

|          |   |  |           |  |
|----------|---|--|-----------|--|
|          | 22  | Indicators: Theory of acid-base, redox, adsorption and complexometric indicators. Double burette method of titration: Principle and advantages.  | <b>2</b>  |  |
| <b>V</b> | <b>INORGANIC CHEMISTRY PRACTICAL I-<br/>VOLUMETRIC ANALYSIS</b> |  | <b>30</b> |  |
|          | 1   | <p>From the list, 6 Experiments are compulsory. The remaining two experiments (not included in the list) can be selected by the teacher</p> <ol style="list-style-type: none"> <li>1. | Course Summary | Atoms and molecules form the matter that is recognisable for us in the real world, as gases, liquids and solids. Why would they exist as they are? And why would they behave as they do? This course is designed to introduce first year UG students, the physical chemistry of matter in different states of its existence through theory and laboratory experiments. The course explains the various types of interactions between atoms and molecules and their important role in physical and chemical characteristics of the different states of matter. The course introduces the theory and experimental methods that are commonly used to study the various states of matter. |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used                       |
|---|---|------------------|---------------------|---|
| CO1   | To understand the basic nature of real gases and understand interactions at molecular levels                            | U                | C                   | Assignments/Quiz designed by the instructor |
| CO2   | To recognise the significance of various interactions in condensed matter   | U                | C                   | Assignments/Quiz designed by the instructor |
| CO3   | To analyse the physical properties of liquids through theory and practical experiments                                  | An               | P                   | Seminars and exams                          |
| CO4   | To explain the regular, periodic arrangement of atoms in solids and appreciate the concept of unit cells                | An               | P                   | Seminars/ exams                             |
| CO5   | To evaluate and understand the importance of the X-ray diffraction technique for characterisation of crystalline solids | Ap               | P                   | Lab/Discussion/Assignments                  |
| CO6   | To execute experiments to determine and tune the various colligative properties of dilute solutions                     | C                | P                   | Lab/Viva voce exams                         |
| <p>* - Remember (R), Understand (U), Apply (Ap), Analyze (An), Evaluate (E), Create (C)</p> <p># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)</p> |   |                  |                     |   |

### Detailed Syllabus:

| Module   | Unit                 | Content   | Hrs (45+30) | Marks     |
|----------|----------------------|---|-------------|-----------|
| <b>I</b> | <b>GASEOUS STATE</b> |   | <b>15</b>   | <b>33</b> |
|          | 1                    | Kinetic theory of gasses: derivation  | <b>1</b>    |           |
|          | 2                    | Maxwell-Boltzmann distribution of molecular velocities — Average velocity, RMS velocity and most probable velocity (derivations not required) | <b>2</b>    |           |
|          | 3                    | Collision theory – Collision diameter-Collision number-Collision frequency - Mean free path – Molecular beams (Mention only)                  | <b>2</b>    |           |

|            |                     |   |           |           |
|------------|---------------------|---|-----------|-----------|
|            | 4                   | Real gas- Deviation from ideal behavior- Compressibility factor – Virial equation and Virial coefficients- van der Waals equation of state (derivation required)-features of van der Waals equation - Expression of van der Waals equation in virial form and calculation of Boyle temperature - PV isotherms of real gasses – Andrews’ experiments - Continuity of states - Isotherm of van der Waals equation | <b>6</b>  |           |
|            | 5                   | Critical phenomena - Critical constants - Relationship between critical constants and van der Waals constants - Experimental determination of critical constants - Supercritical carbon dioxide and its applications.   | <b>4</b>  |           |
| <b>II</b>  | <b>LIQUID STATE</b> |   | <b>8</b>  | <b>17</b> |
|            | 6                   | Discussion of different types (with suitable examples) of molecular interactions- dipole-dipole, dipole-induced dipole, induced dipole-induced dipole interactions, Lennard-Jones 6-12 potential.   | <b>2</b>  |           |
|            | 7                   | Properties of liquids- Vapour pressure, Refractive index, Surface tension- Interfacial tension and viscosity - Poiseuille’s equation – Explanation of these properties on the basis of intermolecular forces.   | <b>3</b>  |           |
|            | 8                   | Hydrogen bonding in water and other polar molecules, its relevance in biological systems.   | <b>2</b>  |           |
|            | 9                   | Liquids on solid surfaces- Hydrophobic and Hydrophilic, Superhydrophilic and Superhydrophobic surfaces- simple explanation by using the water drop contact angles on surfaces   | <b>1</b>  |           |
| <b>III</b> | <b>SOLID STATE</b>  |   | <b>15</b> | <b>33</b> |
|            | 10                  | Crystalline and amorphous solids- atomic and molecular solids- nucleation and growth of crystals.   | <b>2</b>  |           |
|            | 11                  | Crystalline Materials – Periodicity- Types of Close packing and packing fraction.   | <b>1</b>  |           |
|            | 12                  | Space Lattice - Unit cell (use models)- Lattice planes and Miller indices (use models) - 7 crystal systems- 14 Bravais lattices- Types of cubic crystals and their planes- Distance formula for cubic systems- Calculation of crystal density (Use of software like Crystal viewer is recommended).   | <b>4</b>  |           |
|            | 13                  | X-ray diffraction- Bragg's law (derivation)- Powder and single crystal X-ray diffraction  | <b>3</b>  |           |

|           |                                      |   |           |           |
|-----------|--------------------------------------|---|-----------|-----------|
|           |                                      | methods, Atomic scattering factor, Structure factor,  |           |           |
|           | 14                                   | Systematic absences for simple, face centered, and body centered cubic crystals, Analysis of XRD patterns of NaCl, KCl and CsCl. Basic idea of electron and neutron diffraction.  | <b>3</b>  |           |
|           | 15                                   | Structural transitions in TiO <sub>2</sub> - anatase, rutile and brookite phases  | <b>1</b>  |           |
|           | 16                                   | Concepts of melting point/boiling point and molecular/atomic/ionic interactions, Examples: CO <sub>2</sub> , N <sub>2</sub> , H <sub>2</sub> O, NH <sub>3</sub> , NaCl, TiO <sub>2</sub>  | <b>1</b>  |           |
| <b>IV</b> | <b>SOLUTIONS</b>                     |   | <b>7</b>  | <b>15</b> |
|           | 17                                   | Solubility of gases in liquids – Henry's law and its applications   | <b>1</b>  |           |
|           | 18                                   | Colligative properties - Relative lowering of vapour pressure   | <b>1</b>  |           |
|           | 19                                   | Colligative properties- Elevation in boiling point and depression in freezing point   | <b>1</b>  |           |
|           | 20                                   | Colligative properties- Osmotic pressure - Laws of osmotic pressure - Reverse osmosis and its technological relevance   | <b>1</b>  |           |
|           | 21                                   | Determination of molecular mass using colligative properties  | <b>1</b>  |           |
|           | 22                                   | Solid Solutions: Substitutional and interstitial solid solutions, Differences between Alloys, Mixtures and Composites.<br>Colloids: Dispersed phase and dispersing medium, Sol, Emulsion, Foam, and Aerosol, Tyndall effect, Nephelometry   | <b>2</b>  |           |
| <b>V</b>  | <b>PHYSICAL CHEMISTRY PRACTICALS</b> |   | <b>30</b> |           |
|           |                                      | A minimum of 5 practical experiments out of which ONE EACH from sections 1, 2 and THREE from section 3 must be performed and reported. For plots/graphs, suitable softwares may be used and printed hard copies may be presented. Practical records may be in handwritten or computer-typed printed form. |           |           |
|           |                                      | <b>Section 1</b>  |           |           |
|           |                                      | 1. Determination of cryoscopic constant ( $K_f$ ) of solid solvent using a solute of known molecular mass. (Solvent: Naphthalene, biphenyl Solute: Naphthalene, biphenyl, 1,4-dichlorobenzene, diphenylamine)   | <b>3</b>  |           |
|           |                                      | 2. Determination of molecular mass of the solute using a solvent of known cryoscopic constant ( $K_f$ ). (Solvent: Naphthalene, biphenyl Solute:  | <b>3</b>  |           |

|  |   |   |  |
|--|---|---|--|
|  | Naphthalene, biphenyl, 1,4-dichlorobenzene, diphenylamine)  |   |  |
|  | <b>Section 2</b>  |   |  |
|  | 3. Determination of molal transition point depression constant ( $K_t$ ) of salt hydrate using solute of known molecular mass.<br>(Salt hydrates: $\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ , $\text{CH}_3\text{COONa} \cdot 3\text{H}_2\text{O}$ .<br>Solutes: Urea, Glucose)  | 3 |  |
|  | 4. Determination of molecular mass of the solute using a solvent of known molal transition point depression constant ( $K_t$ ).<br>(Salt hydrates: $\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ , $\text{CH}_3\text{COONa} \cdot 3\text{H}_2\text{O}$ .<br>Solutes: Urea, Glucose) | 3 |  |
|  | <b>Section 3</b>  |   |  |
|  | 5. Determination of viscosity of various liquids using Ostwald's viscometer.  | 3 |  |
|  | 6. Study of glycerine-water system and determination of percentage of glycerine using viscometer [plot composition (c) <i>versus</i> time of flow x density of the solution (td)].  | 3 |  |
|  | 7. Determination of the surface tension of a liquid or a dilute solution (NaCl / surfactant) using a stalagmometer (drop number method).  | 3 |  |
|  | 8. Determination of composition of glycerine-water mixture by refractive index method.  | 3 |  |
|  | 9. Determination of refractive indices of KCl solutions of different concentrations and unknown concentration of KCl solution.  | 3 |  |
|  | 10. Indexing powder XRD patterns and determination of unit cell parameters of simple and/or bcc and/or fcc systems (Instructors must provide the powder XRD patterns and ask students to index it and calculate unit cell parameters)   | 3 |  |

| Pre-requisites | <ul style="list-style-type: none"> <li>● Early atom models – John Dalton’s atomic theory, the discharge tube experiment and discovery of electrons, the plum-pudding model, the gold foil experiment and the invention of the nucleus, the nuclear model of the atom, failures of the nuclear model.</li> <li>● Mathematical prerequisites - basic understanding of differentiation, partial differentiation, integration, technique of separation of variables. Cartesian and spherical polar coordinate systems.</li> <li>● VSEPR theory, postulates and applications</li> </ul> |                     |                      |                       |                |
| Course Summary | <p>Properties of bulk matter can be examined from the viewpoint of thermodynamics. But it is essential to know how these properties stem from the behaviour of individual atoms and molecules. The laws of quantum mechanics decide the properties of the micro-world. The course introduces the basic principles of quantum mechanics and explains how quantum mechanics has revolutionised our understanding of atomic structure and chemical bonding.</p>   |                     |                      |                       |                |

**Course Outcomes (CO):**

| CO   | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used  |
|--|--|------------------|---------------------|------------------------|
| CO1  | <i>recognize</i> the importance and the impact of quantum revolution in science.   | R                | F                   | Assignment             |
| CO2  | <i>identify</i> the wave functions of hydrogen atom as atomic orbitals.  | U                | C                   | Class tests/Viva       |
| CO3  | <i>apply</i> the concept of atomic orbitals in chemical bonding (the mixing of wave functions of the two combining atoms). | Ap               | C                   | Seminar/ Class tests   |
| CO4  | <i>relate</i> the concept of hybridization as linear combination of atomic orbitals of the same atom.                      | An               | P                   | Class tests/Assignment |
| CO5  | <i>instill</i> an atomic/molecular level philosophy in the minds of the students.  | C                | M                   | Viva                   |

| # - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) |  |                  |                     |                        |

### Detailed Syllabus:

| Module   | Unit   | Content  | Hrs<br>(45 +30) | Marks     |
|----------|--|--|-----------------|-----------|
| <b>I</b> | <b>The Quantum revolution and its early impact in atomic structure</b> |  | <b>8</b>        | <b>21</b> |
|          | 1  | Experiments which led to the development and generalisation of quantum theory – black body radiation, Planck’s quantum hypothesis, photoelectric effect, Einstein’s generalisation of quantum theory | 3               |           |
|          | 2  | Atomic model partly based on quantum theory – Bohr’s theory of the atom, calculation of Bohr radius, velocity and energy of an electron.   | 3               |           |
|          | 3  | Atomic spectra of hydrogen and explanation using Bohr’s theory; Limitations of Bohr’s theory; Louis de Broglie’s matter waves – wave-particle duality; Davisson and Germer experiment.               | 2               |           |

|           |  |  |           |           |
|-----------|--|--|-----------|-----------|
|           | Sections from References: <b>Section A</b>   |  |           |           |
| <b>II</b> | <b>Introductory Quantum Chemistry and the Quantum Mechanical Model of the Atom</b> |  | <b>22</b> | <b>42</b> |
|           | 4  | Heisenberg's uncertainty principle and the need of quantum mechanics for the micro world; <i>Postulates of quantum mechanics</i> - <i>Wave function postulate</i> , Physical significance of the wave function, The Born interpretation of the wave function and probability density. Well behaved functions, orthonormal functions  | 2         |           |
|           | 5  | <i>Time-dependent Schrodinger equation postulate</i> – Deduction of Time independent Schrödinger wave equation for conservative systems. Laplacian and Hamiltonian operators.  | 2         |           |
|           | 6  | <i>Operator postulate</i> - linear and Hermitian operators, eigenfunctions and eigenvalues of an operator. <i>Eigenvalue postulate</i> . Hermitian operators have real eigenvalues.<br><br><i>Average value or expectation value postulate</i>   | 2         |           |
|           | 7  | <b><i>Applications of time independent Schrödinger wave equation</i></b><br><br><i>Particle in a one dimensional box with infinite potential energy walls</i> – derivation of wave functions and energy, normalization of wave function, plots of wave functions and probability densities, average value of position, average value of momentum, calculation of energy levels and absorption band in butadiene using the particle in a box model. | 4         |           |
|           | 8  | <i>Particle in a one dimensional box with finite potential energy walls</i> (derivation not required) – Introduction to tunnelling, Principle of Scanning Tunnelling Microscopy (STM)  | 1         |           |
|           | 9  | <i>Particles in a three dimensional box</i> – separation of variables and derivation of wave functions and energy, degeneracy of states in a cubic box.  | 2         |           |
|           | 10   | <i>Hydrogen atom</i> - Hamiltonian operator of H-like systems, separation of nuclear and electronic motions - The Born-Oppenheimer approximation, The Schrodinger equation in spherical polar coordinates, separation of variables   | 3         |           |
|           | 11   | Wave functions or atomic orbitals, radial and angular parts of atomic orbitals. Quantum numbers (n, l, m). Radial functions and their plots, Radial distribution functions and   | 3         |           |

|            |  |  |  |           |
|------------|--|--|--|-----------|
|            |  | their plots, Angular functions and their plots (1s, 2s and 2p <sub>z</sub> only).  |  |           |
|            | 12                                     | The Stern - Gerlach experiment and the concept of electron spin, spin quantum number, spin orbitals (elementary idea only). Antisymmetric wave functions and Pauli's exclusion principle.  | 2  |           |
|            | 13                                     | Exact solution of the Schrodinger equation is impossible for multi-electron atoms - Need for approximation methods.  | 1  |           |
|            |  | Sections from References: <b>Section A</b>   |  |           |
| <b>III</b> | <b>Bonding in Diatomic Molecules</b>   |  | <b>12</b>                                  | <b>21</b> |
|            | 14                                     | Hamiltonian operator of H <sub>2</sub> molecule - Born-Oppenheimer approximation, approximate theories of chemical bonding – ( <i>ways of mixing of wave functions of different atoms</i> ).   | 1  |           |
|            | 15                                     | <i>Valence bond theory of H<sub>2</sub> molecule</i> - trial wave function, improvements by including delocalisation of electrons, mutual screening and partial ionic character. Potential energy profile of H <sub>2</sub> molecule formation - equilibrium geometry, Comparison of theoretical and experimental energy profiles.                           | 3  |           |
|            | 16                                     | <i>Molecular orbital theory of H<sub>2</sub> molecule</i> –linear combination of atomic orbitals (LCAO), bonding and antibonding molecular orbitals, wave function as product of one electron functions, electron distribution in bonding and antibonding molecular orbitals, overlap integral, normalisation of bonding and antibonding molecular orbitals. | 3  |           |
|            | 17                                     | MO diagrams of homonuclear diatomic molecules – He <sub>2</sub> , Li <sub>2</sub> , Be <sub>2</sub> , B <sub>2</sub> , C <sub>2</sub> , N <sub>2</sub> , O <sub>2</sub> , F <sub>2</sub> ; Bond order, stability and magnetic properties of these molecules.   | 2  |           |
|            | 18                                     | MO diagrams of heteronuclear diatomic molecules - CO and NO; Bond order.   | 2  |           |
|            | 19                                     | Comparison of VB and MO theories.  | 1  |           |
|            |  |  | Sections from References: <b>Section B</b> |           |
| <b>IV</b>  | <b>Bonding in Polyatomic Molecules</b> |  | <b>6</b>                                   | <b>14</b> |
|            | 20                                     | Concept of Hybridization: Need of hybridization, Definition ( <i>mixing of wave functions of the same atom</i> )   | 1  |           |

|  |  |   |           |  |
|--|--|---|-----------|--|
|  | 21   | LCAO of the central atom – coefficients of atomic orbitals in the linear combination of sp (BeH <sub>2</sub> ), sp <sup>2</sup> (BH <sub>3</sub> ) and sp <sup>3</sup> (CH <sub>4</sub> ) hybridization (derivation not required)   | 4         |  |
|  | 22   | Other examples of hybridization – Geometry of molecules like PCl <sub>5</sub> , SF <sub>6</sub> and IF <sub>7</sub> .   | 1         |  |
| Sections from References: <b>Section B</b>                 |  |   |           |  |
| <b>V</b>   | <b>Open Ended Module: Learning through problem solving and plots</b> |   | <b>12</b> |  |
|  | 1  | <ul style="list-style-type: none"> <li>● Plots of wave functions of particle in a box using excel or other software</li> <li>● Plots of angular parts of atomic orbitals using any freeware</li> <li>● Problem solving sections</li> <li>● Connections with inorganic chemistry topics</li> </ul> |           |  |
| Sections from References: <b>Section A &amp; Section B</b> |  |   |           |  |

### Detailed Syllabus:

| Module    | Unit   | Content   | Hrs       | Marks     |
|-----------|--|---|-----------|-----------|
| <b>I</b>  | <b>Introduction</b>                          |   | <b>12</b> | <b>26</b> |
|           | 1  | IUPAC Nomenclature of multifunctional acyclic and cyclic compounds. Structural isomerism.   | 2         |           |
|           | 2  | Hybridization and bonding in organic compounds (methane, ethane, ethylene and acetylene)  | 2         |           |
|           | 3  | Localised and delocalised bonding. Hydrogen bonding, effect of hydrogen bonding on physical and chemical properties of compounds                                    | 1         |           |
|           | 4  | Organic acids and bases   | 2         |           |
|           | 5  | Basics of MO theory as applied to organic molecules -Ethylene and Buta-1,3-diene.   | 3         |           |
|           | 6  | Aromaticity-Huckel's rule for aromaticity ( Benzenoid compounds)  | 2         |           |
| <b>II</b> | <b>Organic reaction mechanisms</b>           |   | <b>12</b> | <b>26</b> |
|           | 7  | Types of bond fission-Homolytic and Heterolytic fission   | 1         |           |
|           | 8  | Arrow formalism used in reaction schemes.   | 1         |           |
|           | 9  | Electrophiles and Nucleophiles  | 1         |           |
|           | 10   | Electron displacement Effects: Inductive effect and Field effect, Steric effect- Acidity and basicity of organic compounds based on Field effect and steric effect. | 2         |           |
|           | 11   | Electromeric effect, Mesomeric effect   | 2         |           |
|           | 12   | Hyperconjugation- Stability of alkenes.   | 1         |           |
|           | 13   | Reactive intermediates: Structure, formation and stability of carbocations, carbanions, free radicals, carbenes and nitrenes.                                       | 3         |           |
| 14        | Pericyclic reactions and its classifications | 1   |           |           |

|            |   |  |           |           |
|------------|---|--|-----------|-----------|
| <b>III</b> | <b>Stereochemistry-I</b>                            |  | <b>14</b> | <b>30</b> |
|            | 15  | Stereoisomerism: Conformational isomerism and configurational isomerism. Representation of stereostructures of organic molecules using Flying wedge, Fischer, Sawhorse and Newmann projections.  | 3         |           |
|            | 16  | Inter conversion of different projections of L-tartaric acid and 3-chloro-2-butanol.   | 3         |           |
|            | 17  | Conformational Isomerism – Conformational analysis of Ethane, n- butane and cyclohexane with PE diagram.   | 3         |           |
|            | 18  | Conformation of mono substituted cyclohexanes. Relative stability of conformations.  | 2         |           |
|            | 19  | Configurational isomerism: Geometrical isomerism in alkenes, cycloalkanes and oximes. Cis-trans, Syn-Anti and E-Z notations, sequence rule.  | 3         |           |
| <b>IV</b>  | <b>Purification and Characterization Techniques</b> |  | <b>7</b>  | <b>16</b> |
|            | 20  | Distillation- Simple, fractional, steam and vacuum distillations   | 2         |           |
|            | 21  | Recrystallisation, sublimation, solvent extraction.  | 2         |           |
|            | 22  | Chromatography, stationary phase, mobile phase, Rf values, - TLC, Column chromatography, HPLC and GC (basic concepts only).  | 3         |           |
| <b>V</b>   | <b>Practicals</b>                                   |  | <b>30</b> |           |
|            | 1.  | <b>Introduction to organic lab</b>   | 4         |           |
|            | 2   | <ol style="list-style-type: none"> <li>1. Distillation of Aniline,</li> <li>2. Distillation of Limonene (from orange peels)</li> <li>3. Purification of organic compounds by crystallization using the following solvents: a. Water b. Alcohol</li> <li>4. Sublimation of a dicarboxylic acid/Naphthalene</li> <li>5. Molecular model construction and conformation of ethane</li> <li>6. Molecular model construction of Ethylene or Acetylene</li> <li>7. Molecular model construction of acetaldehyde and Cyclohexane.</li> </ol> | 20        |           |
|            | 3   | Open ended   | 6         |           |

| Pre-requisites | Classification of elements to different blocks, Comparative study of s and p block elements based on electronic configuration and atomic size, General idea about transition and inner transition elements, Concept of coordinate bond, Differences between double salts and complexes, Ligands, Coordination number. Concept of catenation and polymerization. Theoretical and practical knowledge about volumetric analysis. |                     |                      |                       |             |
| Course Summary | This course explains characteristics of s, p, d and f block elements. It also gives an insight into various theories in coordination compounds. It explores the application of inorganic chemistry in daily life. It covers practical application of complex formation in quantitative analysis.   |                     |                      |                       |             |

#### Detailed Syllabus:

| Module   | Unit                            | Content   | Hrs       | Mark      |
|----------|---------------------------------|---|-----------|-----------|
| <b>I</b> | <b>s &amp; p BLOCK ELEMENTS</b> |   | <b>15</b> | <b>33</b> |
|          | 1                               | s block General properties: Ionization Energy, Flame coloration, Photoelectric effect, Metallic character, Hydration energy.  | 2         |           |
|          | 2                               | p block elements: Comparative study- Halides, Sulfates, Carbonates and bicarbonates (solubility and thermal stability)  | 1         |           |
|          | 3                               | Oxidation number and inert pair effect, Comparison of Lewis acidity of boron halides.   | 2         |           |
|          | 4                               | Preparation, Properties, Structure and uses of Diborane, Boric acid, Borazine and Boron nitride, Structure of $AlCl_3$  | 3         |           |
|          | 5                               | Structure and bonding of oxides of N ( $N_2O$ , $NO$ , $N_2O_3$ , $NO_2$ , $N_2O_4$ , $N_2O_5$ ) and S ( $SO_2$ and $SO_3$ )  | 2         |           |
|          | 6                               | Oxo acids of P ( $H_3PO_2$ , $H_3PO_3$ , $H_3PO_4$ ) and Cl ( $HOCl$ , $HOCl_2$ , $HOCl_3$ , $HOCl_4$ ) (Structure and Acid strength), Colour and Bond Dissociation energy of halogens. | 1         |           |
|          | 7                               | Interhalogen compounds: Preparation, Properties, Uses and Structure (One example each for $AB$ , $AB_3$ , $AB_5$ and $AB_7$ types), Electropositive character of iodine, Pseudo         | 3         |           |

|            |    |  |              |           |
|------------|----|--|--------------|-----------|
|            |    | halogen: Comparison of Pseudo halogen (Cyanogen as example) and halogens and structure of Poly halide ions.  |              |           |
|            | 8  | Noble gases: Isolation of noble gases: Dewar's method- Separation by charcoal adsorption method, Uses of He, and Ne  | 1            |           |
| <b>II</b>  |    | <b>TRANSITION AND INNER TRANSITION ELEMENTS</b>  | <b>8hr</b>   | 17        |
|            | 9  | Electronic configuration and General characteristics, Ionization energy, Colour, Magnetic properties, Reducing properties, Catalytic properties.   | <b>2</b>     |           |
|            | 10 | Non-stoichiometric compounds, Complex formation and Alloy formation. Comparison of 3d, 4d and 5d transition series. Important application of transition metals. Isopoly and heteropoly anions of W and Mo. | <b>2</b>     |           |
|            | 11 | Lanthanides and Actinides- Electronic configuration and General properties. Isolation of Lanthanides from monazite sand, Separation by ion exchange method.  | <b>2</b>     |           |
|            | 12 | Magnetic properties. Lanthanide contraction, causes and consequences. Industrial importance of Lanthanides. Comparison of Actinides & Lanthanides [Mention only].  | <b>2</b>     |           |
| <b>III</b> |    | <b>COORDINATION CHEMISTRY</b>  | <b>15 hr</b> | <b>33</b> |
|            | 13 | IUPAC Nomenclature of complexes, Types of ligands: (mono, bi, tri, tetra, hexa, ambidentate, chelate and macrocyclic ligands), Isomerism-Structural and Stereoisomerism,                                   | <b>2</b>     |           |
|            | 14 | Review of Werner's theory and Sidwick concept of coordination-EAN rule,  | <b>1</b>     |           |
|            | 15 | Factors affecting stability of complexes, Application of coordination complexes in quantitative and qualitative analysis.  | <b>2</b>     |           |
|            | 16 | Theories of bonding, VBT (valence bond theory), Geometry of coordination numbers 4 & 6, Limitation of VBT.   | <b>2</b>     |           |
|            | 17 | Crystal field Theory: CFT-splitting of d orbitals in Octahedral and Tetrahedral complexes. CFSE of low spin and high spin octahedral complexes- Normal and inverse   | <b>3</b>     |           |

|           |    |  |              |           |
|-----------|----|--|--------------|-----------|
|           |    | spinel compounds, Factors affecting crystal field splitting, Spectrochemical series.   |              |           |
|           | 18 | CFT-splitting of d orbitals in Tetragonal and Square planar Complexes. Magnetism (spin only magnetic moment) and Colour (d-d transition), Distorted octahedral complexes- Jhan-Teller theorem, CFSE calculation and its applications, Merits and demerits of CFT.  | 5            |           |

### Detailed Syllabus:

| Module | Unit                      | Content  | Hours | Marks |
|--------|---------------------------|--|-------|-------|
| I      | <b>Stereochemistry II</b> |  | 13    | 29    |
|        | 1                         | Optical Isomerism: Optical activity – Concept of chirality – Chirality in organic molecules.   | 2     |       |
|        | 2                         | Enantiomers, Diastereomers and Meso compounds.   | 2     |       |
|        | 3                         | Optical isomerism in glyceraldehyde, lactic acid and tartaric acid.  | 1     |       |
|        | 4                         | Relative and absolute configuration - DL system, RS system of nomenclature for acyclic optical isomers with one and two asymmetric carbon (Amino acids ,Tartaric acids)– sequence rules. Erythro and threo representations (basic idea only) | 4     |       |
|        | 5                         | Racemic mixture – Resolution methods (Chemical and biochemical methods)  | 2     |       |

|            |   |  |    |    |
|------------|---|--|----|----|
|            | 6   | Enantiomeric excess, Optical purity. Common approaches in asymmetric synthesis. (mention only)   | 2  |    |
| <b>II</b>  | <b>Addition reactions</b>                     |  | 12 | 27 |
|            | 7   | Addition reactions to carbon-carbon multiple bonds: Origin of reactivity, regioselectivity (Markownikov's and anti-Markownikov's additions) and stereoselectivity of addition reactions  | 2  |    |
|            | 8   | Examples of addition reactions: hydrogenation, halogenation, hydrohalogenation, hydration, oxymercuration-demercuration,   | 2  |    |
|            | 9   | hydroboration-oxidation, epoxidation, dihydroxylation, ozonolysis.   | 1  |    |
|            | 10  | Addition to C≡C: Mechanism, reactivity, regioselectivity (Markownikov's and anti-Markownikov's additions) and stereoselectivity  | 3  |    |
|            | 11  | Reactions: Complete hydrogenation, Partial hydrogenation, Electrophilic addition of halogens and hydrogen halides, Ozonolysis  | 2  |    |
|            | 12  | Acidity of alkynes – test for terminal alkynes – Oxidation– (Ozonolysis and reaction with alkaline KMnO <sub>4</sub> ). Chemistry of the tests for unsaturation: Bromine water and Baeyer's reagent test.                                | 2  |    |
| <b>III</b> | <b>Substitution and Elimination Reactions</b> |  | 10 | 21 |
|            | 13  | Nucleophilic substitution reactions: Substitution at sp <sup>3</sup> centre (systems: alkyl halides and alcohols)- Origin of reactivity, SN1, SN2 with stereochemical aspects, types of leaving groups (Oxygen-based and halogen-based). | 3  |    |
|            | 14  | Effects of substrate structure, solvent, nucleophile, and leaving group on Nucleophilic aliphatic substitution reactions.  | 3  |    |
|            | 15  | Elimination reactions: E1, E2 & E1CB mechanisms. formation of alkenes and alkynes; mechanisms (with evidence), reactivity, regioselectivity (Saytzeff/Hofmann), and stereoselectivity;   | 3  |    |
|            | 16  | competition between substitution and elimination reactions. Syn elimination  | 1  |    |
| <b>IV</b>  | <b>Aromatic Substitution Reactions</b>        |  | 10 | 21 |

|   |            |  |    |  |
|---|------------|--|----|--|
|   | 17         | Aromatic Electrophilic Substitution: Mechanism of nitration, halogenation, sulphonation, Friedel-Crafts alkylation, and acylation  | 3  |  |
|   | 18         | Synthesis of Aspirin. Ring activating and deactivating groups- Orientating effect of common substituents in aromatic electrophilic substitution.   | 2  |  |
|   | 19         | Electrophilic substitution reactions of Phenols (bromination, nitration and sulphonation)  | 2  |  |
|   | 20         | Preparation of phenolphthalein and Fluorescein   | 1  |  |
|   | 21         | Aromatic nucleophilic substitution: Bimolecular displacement mechanism   | 1  |  |
|   | 22         | Elimination-addition (benzyne intermediate) mechanism.   | 1  |  |
| V | PRACTICALS |  | 30 |  |
|   | I          | 1. Separation of binary mixture using solvent extraction (strong acid neutral, basic+neutral and weak acid+neutral compound combinations)<br>2. Bromination of Cinnamic acid (Green method- Bromide -Bromate mixture)<br>3. Preparation of dibenzal acetone<br>4. Nitration of acetanilide<br>5. Reduction of ethyl acetoacetate by yeast and measurement of optical rotation.<br>6. Drawing structures using software.<br>7. Visualization of SN2 reaction using software | 24 |  |
|   |            | Open Ended:<br><br>1. Making models of enantiomers and diastereomers   | 6  |  |

| Pre-requisites | <p>[Prerequisites: NCERT or equivalent chemistry syllabus of XI and XII, <a href="https://onlinecourses.swayam2.ac.in/nce24_sc07/preview">https://onlinecourses.swayam2.ac.in/nce24_sc07/preview</a></p> <p>Fundamentals of Chemical Thermodynamics. Path function and state function - Thermodynamic terms for defining System - Surroundings - Types of systems]</p>   |                     |                      |                       |             |
| Course Summary | <p>We witness, feel and create physical and/or chemical change(s) everyday. What drives these changes? This course deals with the principles of chemical thermodynamics and chemical kinetics to answer these questions. The subject matter covered will enable the student to understand the relation between heat, work, temperature, and energy. Here, the various tools to evaluate chemical systems in equilibrium and rates of chemical reactions are also introduced. Further, the concept of catalysis and its importance in industrial processes is also included in this course.</p> |                     |                      |                       |             |

| Module   | Unit   | Content   | Hrs<br>(45+30) | Marks     |
|----------|--|---|----------------|-----------|
| <b>I</b> | <b>FIRST LAW OF THERMODYNAMICS AND THERMOCHEMISTRY</b> |   | <b>15</b>      | <b>33</b> |
|          | 1  | Intensive and extensive properties - Steady state and equilibrium state. Concept of thermal equilibrium                       | <b>1</b>       |           |
|          | 2  | Zeroth law of thermodynamics. Intensive, extensive and state variables (state functions), Introduction to partial derivatives | <b>3</b>       |           |

|            |  |   |           |           |
|------------|--|---|-----------|-----------|
|            |  | and line integrals, Euler theorem, Exact and Inexact differential, Illustration of exact differential using molar volume of ideal gas.  |           |           |
|            | 3  | First law of thermodynamics – Concept of heat (q), work, internal energy(U) and enthalpy (H) - Heat capacities at constant volume and at constant pressure & their relationship - Expansion of an ideal gas under isothermal and adiabatic conditions - Work done in reversible isothermal and adiabatic expansion. | 4         |           |
|            | 4  | Joule-Thomson effect- significance of term $(dU/dV)_T$ - Liquefaction of gasses - Derivation of the expression for Joule Thomson coefficient – Inversion temperature.   | 3         |           |
|            | 5  | Thermochemistry: Heat changes during physical and chemical changes. Hess's Law.   | 2         |           |
|            | 6  | Temperature dependence of reaction enthalpies- Kirchoff's law. Bond dissociation energies. Resonance energy from thermochemical data.   | 2         |           |
| <b>II</b>  | <b>SECOND &amp; THIRD LAWS OF THERMODYNAMICS</b> |   | <b>10</b> | <b>21</b> |
|            | 7  | Limitations of first law and Need for the second law – Kelvin and Clausius statements. Carnot's theorem and Heat engine and its efficiency.   | 2         |           |
|            | 8  | Concept of Entropy. Calculation of entropy change for reversible and irreversible processes. Statement of first law in terms of entropy. Entropy change during the isothermal mixing of ideal gasses.   | 2         |           |
|            | 9  | Energy functions (Gibbs free energy (G) and Helmholtz energy (A)) and their variation with T and P.   | 2         |           |
|            | 10   | Maxwell's relations. Gibbs-Helmholtz equation - Criteria for spontaneity and equilibrium - Significance of Clausius inequality.   | 2         |           |
|            | 11   | Partial molar free energy - Concept of chemical potential - Gibbs-Duhem equation.   | 1         |           |
|            | 12   | Third law of thermodynamics - Nernst heat theorem - Statement of third law.   | 1         |           |
| <b>III</b> | <b>CHEMICAL KINETICS</b>                         |   | <b>15</b> | <b>33</b> |
|            | 13   | Rate of a reaction - Factors influencing the rate of a reaction- Concentration, Temperature, Surface area and Catalyst - Rate law - Order and molecularity -  | 2         |           |

|           |   |   |           |           |
|-----------|---|---|-----------|-----------|
|           | 14  | Derivation of rate constants for first, second (with same and different reactants), third (with same reactants only) and zero order reactions with examples. Data interpretation including graphical representations  | <b>4</b>  |           |
|           | 15  | Half-life period (derivation for first and n <sup>th</sup> order reactions) - Methods to determine the order of a reaction.   | <b>1</b>  |           |
|           | 16  | Effect of temperature on reaction rates - Arrhenius equation - Determination and significance of Arrhenius parameters   | <b>1</b>  |           |
|           | 17  | Theories of reaction rates - Collision theory - Derivation of rate equation for bimolecular reactions using collision theory - Transition state theory - Expression for rate constant based on equilibrium constant and thermodynamic aspects – Eyring equation (derivation not required) | <b>5</b>  |           |
|           | 18  | Unimolecular reactions - Lindemann mechanism.   | <b>2</b>  |           |
| <b>IV</b> | <b>SURFACE CHEMISTRY, ADSORPTION AND CATALYSIS</b>  |   | <b>5</b>  | <b>11</b> |
|           | 19  | Solid surfaces, microstructure and elementary idea about microscopic techniques for studying the surface of solids (SEM, TEM, STM, AFM)   | <b>1</b>  |           |
|           | 20  | Physisorption, Chemisorption. Adsorption isotherms – Langmuir, Freundlich and BET (No derivation required). Determination of Surface area, Particle size and surface area, Activated charcoal and its uses  | <b>2</b>  |           |
|           | 21  | Homogeneous and heterogeneous catalysis - Theories of homogenous and heterogenous catalysis with examples   | <b>1</b>  |           |
|           | 22  | Enzyme catalysis - Michaelis-Menten equation (derivation not required). Application of enzyme technology for environmental, medical, agricultural, and industrial benefits.   | <b>1</b>  |           |
| <b>V</b>  | <b>PHYSICAL CHEMISTRY- PRACTICALS-2</b>   |   | <b>30</b> |           |
|           | A minimum of 5 practical experiments out of which TWO EACH from sections 1 and 2 must be performed and reported. For plots/graphs, suitable softwares may be used and printed hard copies may be presented. Practical records may be in handwritten or computer-typed printed form. |   |           |           |
|           | Section 1   |   |           |           |
|           | 1. Determination of rate constant of the Acid Hydrolysis of ethyl acetate   |   | <b>3</b>  |           |
|           | 2. Determination of effect of temperature on the rate of acid hydrolysis of ethyl acetate   |   | <b>3</b>  |           |
|           | 3. Determination of order of the reaction between crystal   |   |           |           |

|  |  |  |   |  |
|--|--|--|---|--|

| Course Summary | <p>The course introduces the theoretical aspects of two fundamental topics of theoretical chemistry which find a wide range of practical applications - Group theory and Molecular Spectroscopy.</p> <p><i>Group theory</i> is a topic of mathematics which suggests that sets of elements (whatever be their nature) can be grouped into mathematical groups if they obey certain conditions. The course brings to light how group theory can be used for systematizing the study of structures of molecules based on their symmetry. This can be done by grouping the millions and millions of molecules that we come across into only a few mathematical groups called point groups based on the symmetry operations possessed by them. Such groupings help in simplifying the study of structure related properties of molecules.</p> |                  |                   |                    |             |

|  |  |
|--|--|
|  | <p><i>Molecular Spectroscopy:</i> The interaction of electromagnetic radiation with matter forms the basis for the different spectroscopic techniques used for the structural elucidation of molecules. The course brings to light the underlying principles involved in each of these spectroscopic techniques. The allowed energy states of molecules and the transitions between them are unique and are decided by the laws of quantum mechanics. Radiations having different frequencies (and hence different energy) interact with molecules and bring about characteristic transitions which help to identify the exact structure of molecules.</p> |
|--|--|

### Course Outcomes (CO):

| CO   | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used  |
|------|---|------------------|---------------------|------------------------|
| CO 1 | <i>understand</i> the principles of constructing mathematical groups..  | U                | F                   | Assignment             |
| CO 2 | <i>realise</i> point groups as collections of symmetry operations of molecules  | Ap               | C                   | Class tests/Viva       |
| CO 3 | <i>identify</i> each spectroscopic method as the interaction of molecules with a characteristic radiation of the electromagnetic spectrum | An               | P                   | Seminar/ Class tests   |
| CO 4 | <i>apply</i> various spectroscopic techniques for the structural elucidation of molecules.  | Ap               | P                   | Class tests/Assignment |
| CO 5 | <i>justify</i> spectroscopic methods as unique tools for identifying molecules.   | E                | M                   | Viva                   |

| Pre-requisites | Different segments of environment, Environmental pollution, Different types of pollution, health effect and hazards associated with chemicals, Acid-base concepts, basic idea about chemical analysis   |                  |                   |                    |             |
| Course Summary | <p>This course explains different types of environmental pollution, its causes, consequences, remedies of prevention and develop concerns for the environment</p> <p>It reveals the importance of need of green chemistry and green synthesis</p> <p>It gives an idea about major acid base concepts and reactions in nonaqueous solvents</p> <p>It initiates the students for exploitation of advanced materials in the demand of changing trends of modern industry.</p> <p>This course explores students to the role and opportunities of Chemistry as a discipline in the modern era and develops skills in qualitative and quantitative analysis of inorganic compounds.</p> |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO   | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used  |
|--|--|------------------|---------------------|--|
| CO1  | To critically evaluate issues in environment   | An               | C                   | Instructor-created exams / Assignments                       |
| CO2  | To gain insights into the economic and environmental aspects of green chemistry and to contribute the advancement of sustainable practices in the field of chemistry | Ap               | C                   | Assignment / seminar/quizes                                  |
| CO3  | To understand the theories of acids and bases and reactions in non aqueous solvents and to identify compounds as acids and bases                                     | Ap               | C                   | Assignment/Seminar/Class test                                |
| CO4  | To understand and apply principles of material chemistry and its facets  | Ap               | C                   | Assignment/Seminar/Class test                                |
| CO5  | To equip the students with familiarization in separation and identification of ions  | Ap               | P                   | Group work /Assignment/class test/                           |
| CO6  | Practicum in inorganic qualitative analysis with hands on familiarity with various ions  | An               | P                   | Group work /Assignment/ Viva, Observation of practical skill |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) |  |                  |                     |  |

**Detailed Syllabus:**

| Module | Unit | Content  | Hrs       | Mark      |
|--------|------|--|-----------|-----------|
| I      |      | <b>ENVIRONMENTAL CHEMISTRY AND GREEN CHEMISTRY</b> | <b>15</b> | <b>33</b> |

|            |  |   |           |           |
|------------|--|---|-----------|-----------|
|            | 1  | Environment and Environmental pollution, pollutant and contaminant, Segments of Environment   | 1         |           |
|            | 2  | Air Pollution : Types of air pollutants, Gaseous air pollutants (oxides of carbon, nitrogen and sulphur), Particulates.   | 2         |           |
|            | 3  | Effects of air pollution: Smog (London and Los Angeles Smog), Global warming, ozone depletion, acid Rain,   | 2         |           |
|            | 4  | Control of air Pollution, alternative refrigerants  | 1         |           |
|            | 5  | Water Pollution : Sources of water pollution, Eutrophication, Bioaccumulation, bioMagnification,  | 2         |           |
|            | 6  | Water quality parameters (DO,BOD and COD and their determination), Toxic metals in water(Pb, Cd and Mg), control of water pollution   | 2         |           |
|            | 7  | Soil pollution, Thermal pollution, noise pollution, light pollution, radiation pollution (Sources and effects)  | 3         |           |
|            | 8  | Introduction to Green chemistry – Goals of Green chemistry, Twelve basic principles of green chemistry- Atom economy- Green solvents- water, supercritical fluids, ionic liquids [mention with examples). | 2         |           |
| <b>II</b>  | <b>ACID BASE CONCEPTS AND NON-AQUEOUS SOLVENTS</b> |   | <b>5</b>  | <b>10</b> |
|            | 9  | Major acid-base concepts, Arrhenius, Bronsted-Lowry, Solvent system, Lux-Flood, Lewis and Usanovich concepts.   | 2         |           |
|            | 10   | Non - aqueous Solvents: Classification – General Properties   | 1         |           |
|            | 11   | Reactions in Liquid Ammonia, liquid SO <sub>2</sub> and Liquid HF   | 2         |           |
| <b>III</b> | <b>MATERIAL CHEMISTRY</b>                          |   | <b>15</b> | <b>33</b> |
|            | 12   | Introduction and scope of material chemistry-   | 1         |           |
|            | 13   | Ceramic materials: Definition, classification( traditional and advanced ceramics) , Composition- oxides and nitrides- general   | 5         |           |

|           |  |  |           |           |
|-----------|--|--|-----------|-----------|
|           |  | properties- applications- structural, Electronics, thermal and biomedical applications   |           |           |
|           | 14   | Catalytic materials : zeolites, alumina- surface properties, supporting materials  | 3         |           |
|           | 15   | Composite materials: Definition and types of composite materials (polymer matrix composites, metal matrix composites, carbon matrix composites- explanation with examples  | 3         |           |
|           | 16   | Inorganic solids :Perovskites- $ABX_3$ - $CaTiO_3$ , $LaCoO_3$ , spinel compounds- $AB_2O_4$ - $MgAl_2O_4$   | 3         |           |
| <b>IV</b> | <b>INORGANIC QUALITATIVE AND QUANTITATIVE ANALYSIS</b> |  | <b>10</b> | <b>22</b> |
|           | 17   | Inorganic qualitative analysis: Need for elimination of interfering acid radicals and their elimination methods – oxalate, fluoride, borate, phosphate, chromate, arsenite and arsenate  | 1         |           |
|           | 18   | Principles of separation of basic radicals into various groups – Solubility product and Common Ion effect – Their application in the qualitative inorganic analysis.   | 2         |           |
|           | 19   | Micro analysis: merits and application, preparation of sodium carbonate extract and its merits   | 1         |           |
|           | 20   | Inorganic Quantitative Analysis – Gravimetric analysis – Introduction – Types of gravimetric analysis, Precipitation, Advantages and disadvantages of gravimetric analysis –   | 2         |           |
|           | 21   | Properties of precipitates and precipitating agents, Mechanism of precipitate formation- Von Weimarn equation and its applications– Co-Precipitation and post precipitation –  | 2         |           |
|           | 22   | Homogeneous and heterogeneous precipitation – gravimetric factor - Inorganic and Organic precipitating agents and their applications - $NH_3$ , $H_2SO_4$ , $NH_4 SCN$ , oxine, cupron, cupferron, 1-nitroso-naphthol, dithiocarbamates. | 2         |           |

|          |  |   |           |  |
|----------|--|---|-----------|--|
| <b>V</b> | <b>INORGANIC CHEMISTRY PRACTICAL III:INORGANIC QUALITATIVE AND QUANTITATIVE ANALYSIS</b> |   | <b>30</b> |  |
|          |  | <p><b>1. Inorganic qualitative analysis:</b></p> <p>a) Study of reactions of following ions,<br/> <i>Anions:</i> carbonate, sulphate, fluoride, chloride, acetate, borate, oxalate, phosphate and nitrate</p> <p><i>Cations:</i> Lead, bismuth, copper, cadmium, iron, aluminium, cobalt, nickel</p> <p>manganese, zinc, barium, calcium, strontium, magnesium and ammonium</p> <p>b) Systematic analysis of mixtures containing two cations and two anions from the above list (Na<sub>2</sub>CO<sub>3</sub> extract procedure may be adopted)</p> |           |  |
|          |  | <p><b>2. Inorganic quantitative analysis : Gravimetric analysis (Open ended)</b></p> <p>a) Estimation of barium as barium sulphate or sulphate as barium sulphate can be done</p>   |           |  |

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used                       |
|-----|---|------------------|---------------------|---|
| CO1 | Analyze and compare the reactivity of aldehydes and ketones in nucleophilic addition reactions using various carbon, nitrogen, oxygen and sulphur nucleophiles                | An               | P                   | Instructor-created exams / Quiz /Assignment |
| CO2 | Explain the origin of reactivity of carboxylic acids and their derivatives and analyse nucleophilic acyl substitution reactions and hydrolysis of carboxylic acid derivatives | U                | C                   | Class test /Assignment /Quiz                |
| CO3 | Demonstrate the oxidation and reduction reactions of alkenes, alkynes, alcohols, aldehydes, ketones and carboxylic acids using various oxidising and reducing agents          | Ap               | P                   | Assignment/ Class test                      |

|  |  |    |   |                                   |
|--|--|----|---|-----------------------------------|
| CO4  | Identify the preparation methods and important reactions of nitro compounds, amines and sulpha drugs and explain the properties and synthetic transformations of aryl diazonium salts  | Ap | P | Assignments /Seminar presentation |
| CO5  | Evaluate reactions involving $\alpha$ -carbons of carbonyl compounds and conjugated addition reactions of $\alpha,\beta$ -unsaturated carbonyl compounds and apply active methylene compounds in organic preparations  | E  | C | Class test /Assignment /Quiz      |
| CO6  | Conduct qualitative tests to identify specific functional groups, such as aldehydes, ketones, carboxylic acids, phenols, nitro compounds, amines, amides, esters etc. and synthesis of some organic compounds like aspirin, cinnamic acid, iodoform, biodiesel etc | An | P | Lab work/Viva Voce                |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) |  |    |   |                                   |

### Detailed Syllabus:

| Module   | Unit                                     | Content  | Hrs       | Marks     |
|----------|--|--|-----------|-----------|
| <b>I</b> | <b>Chemistry of Carbonyl Compounds-I</b> |  | <b>15</b> | <b>32</b> |
|          | 1  | Origin of reactivity of the carbonyl group. Comparison of reactivity of aldehydes and ketones  | 2         |           |
|          | 2  | Nucleophilic addition reactions of aldehydes and ketones (Mechanism expected) - Carbon nucleophiles (Addition of HCN, Grignard reagents), Nitrogen nucleophiles (NH <sub>3</sub> , amine, hydroxylamine, hydrazine, semicarbazide and DNP reagent), Oxygen nucleophiles (H <sub>2</sub> O, alcohols), Sulphur nucleophiles (sodium bisulphite) | 3         |           |
|          | 3  | Keto-enol tautomerism. Reactions involving $\alpha$ carbons of carbonyl compounds - Aldol condensation, Cannizzaro reaction and Benzoin condensation (mechanism expected), Perkin's reaction, Knoevenagel reaction and Haloform reaction (mechanism not expected)  | 5         |           |
|          | 4  | Conjugate addition reactions of $\alpha,\beta$ -unsaturated carbonyl compounds – 1,2 and 1,4 – addition reactions  | 2         |           |

|            |  |   |          |           |
|------------|--|---|----------|-----------|
|            | 5  | Active Methylene Compounds: Examples – Preparation of ethyl acetoacetate by Claisen condensation (mechanism expected) – Synthetic applications of ethyl acetoacetate  | 3        |           |
| <b>II</b>  | <b>Chemistry of Carbonyl Compounds-II</b>  |   | <b>8</b> | <b>18</b> |
|            | 6  | Origin of reactivity in the carboxylic acid family. Nucleophilic acyl substitution reactions and Mechanism  | 2        |           |
|            | 7  | Comparison of reactivity of Carboxylic Acids and derivatives, Hydrolysis of carboxylic acid derivatives   | 2        |           |
|            | 8  | Fischer esterification (mechanism expected), HVZ reaction, Decarboxylation – Kolbe electrolysis (mechanism expected)  | 2        |           |
|            | 9  | Interconversion of Carboxylic acid derivatives. Introductory idea about $\beta$ -lactam antibiotics – Structure and action of Penicillin- G   | 2        |           |
| <b>III</b> | <b>Oxidation &amp; Reduction reactions</b> |   | <b>7</b> | <b>16</b> |
|            | 10   | Oxidation and reduction of alkenes and alkynes  | 1        |           |
|            | 11   | Oxidation of alcohols with PCC and $\text{CrO}_3$   | 1        |           |
|            | 12   | Oxidation of aldehydes and ketones with acidified $\text{K}_2\text{Cr}_2\text{O}_7$ , $\text{KMnO}_4$ , $\text{CrO}_3$ ; Oppenauer oxidation. Distinguishing aldehydes and ketones (Tollen's reagent, Fehling's solution) | 2        |           |
|            | 13   | Reduction of aldehydes and ketones – Catalytic hydrogenation, Wolf-Kishner, Clemmensen, metal hydride ( $\text{LiAlH}_4$ and $\text{NaBH}_4$ ) and MPV reduction  | 2        |           |
|            | 14   | Reduction of carboxylic acids ( $\text{LiAlH}_4$ , $\text{BH}_3$ )  | 1        |           |
|            | <b>IV</b>                                  | <b>Nitrogen containing compounds</b>  |          |           |
| 15         |  | Nitro compounds: Preparation and important reactions of nitro compounds, Ketones from nitro compounds – Nef reaction (mechanism not required)   | 2        |           |
| 16         |  | Reduction products of nitrobenzene in acidic, neutral and alkaline media  | 2        |           |
| 17         |  | Amines: Preparation – Gabriel phthalimide synthesis, from reduction of nitriles and isonitriles.  | 1        |           |
| 18         |  | Amines: Properties - Carbylamine reaction, Mannich reaction, Hoffmann's exhaustive methylation, Hofmann-elimination reaction (with mechanism and stereochemistry)   | 3        |           |
| 19         |  | Electrophilic substitution reactions of aniline (Nitration, Bromination and Benzoylation)   | 2        |           |

|          |  |   |           |  |
|----------|--|---|-----------|--|
|          | 20   | Distinction between 1°, 2° and 3° amines with Hinsberg reagent and nitrous acid   | 1         |  |
|          | 21   | Preparation and uses of sulpha drugs – Structural formula of sulphapyridine, sulphadiazine, sulphathiazole and sulphaguanidine  | 2         |  |
|          | 22   | Synthetic transformations of aryl diazonium salts, azo coupling. Preparation of methyl orange   | 2         |  |
| <b>V</b> | <b>Practicals - Reactions of Organic Compounds</b> |   | <b>30</b> |  |
|          | I  | Analysis of organic compounds from the following list (also prepare the derivatives).<br>1. Phenols (phenol, $\alpha$ -naphthol).<br>2. Nitro compounds (nitrobenzene, o-nitrotoluene).<br>3. Amines (aniline, N,N-dimethylaniline).<br>4. Aldehydes and ketones (benzaldehyde, benzophenone).<br>5. Carboxylic acid (benzoic acid, cinnamic acid, phthalic acid, salicylic acid).<br>6. Carbohydrates (glucose, sucrose).<br>7. Amides (benzamide, urea).<br>8. Esters (ethyl benzoate, methyl salicylate).<br>Analysis of about 7 organic compounds containing the above functional groups. | 16        |  |
|          | II   | Organic Preparations (Any two)<br>Synthesis of aspirin, cinnamic acid, iodoform and biodiesel   | 8         |  |
|          | III  | Open Ended  | 6         |  |

| Pre-requisites | Solid foundation in Coordination Chemistry. Uniqueness of carbon, covalent bond, and coordinate bond. Bonding in carbon monoxide. Knowledge about minerals and ores. Importance of metal ions in biological systems. Atomic number, mass number, isotopes, basic idea about nuclear radioactivity, Nuclear fission and fusion.  |                     |                      |                       |             |
| Course Summary | This course enables the students to develop knowledge about theories of bonding in coordination compounds, stability constants, chelating effects. It covers the detailed study on structure, bonding and applications of organometallic compounds. It gives basic understanding of different metallurgical processes. It enables the students to familiarise with various metal ions, their compounds and their important in biological systems. It covers various aspects of nuclear chemistry including nuclear stability and reactions. |                     |                      |                       |             |

### Detailed Syllabus:

| Module   | Unit   | Content  | Hrs       | Mark      |
|----------|--|--|-----------|-----------|
| <b>I</b> | <b>THEORIES OF BONDING IN COORDINATION COMPOUNDS</b> |  | <b>15</b> | <b>30</b> |
|          | 1  | Molecular orbital theory-Composition of ligand group orbitals.   | 2         |           |
|          | 2  | MO diagram of octahedral tetrahedral and square planar complexes with and without $\pi$ -bonding.              | 4         |           |
|          | 3  | Stepwise and overall formation constant and relationship between them, Trends in stepwise formation constants. | 3         |           |

|            |                                 |   |           |           |
|------------|---------------------------------|---|-----------|-----------|
|            | 4                               | Determination of stability constants by spectrophotometric methods. Stabilization of unusual oxidation state.   | 3         |           |
|            | 5                               | Thermodynamic origin of chelating effect, Macrocyclic and Template effect.  | 3         |           |
| <b>II</b>  | <b>ORGANOMETALLIC CHEMISTRY</b> |   | <b>12</b> | <b>25</b> |
|            | 6                               | Definition, Classification of organometallic compounds on the basis of M-C bond with examples. Classification of organic ligands based on hapticity.  | 2         |           |
|            | 7                               | Metal carbonyls-Definition- Classification, 18 electron rule and deviation from 18 electron rule, Electron count of mononuclear and polynuclear metal carbonyls (calculation by oxidation number method and covalent method). MOT and the basis for the 18 electron rule.   | 2         |           |
|            | 8                               | General methods of preparation properties and structures of mono and binuclear carbonyls of Cr, Mn, Fe, Co and Ni.  | 2         |           |
|            | 8                               | Bonding in metal carbonyls (MO diagram of CO to be discussed). Synergic effect and use of IR spectra to explain the extent of back bonding.   | 2         |           |
|            | 9                               | Preparation, Structure, Bonding and Reactions : Zeise's salt, Metallocenes- Ferrocene (VBT and MOT).  | 3         |           |
|            | 10                              | Applications of organometallic compounds in synthesis and as catalysts, Hydrogenation using Wilkinson's catalyst and Polymerization of alkenes using Ziegler Natta catalyst (mechanism not needed).   | 1         |           |
| <b>III</b> | <b>METALLURGY</b>               |   | <b>11</b> | <b>23</b> |
|            | 11                              | Discuss the terms: Mineral, Ore, Gaunge, Flux, slag, Electrometallurgy – Hydrometallurgy.   | 2         |           |
|            | 12                              | Steps in metallurgy:(a)Pulverization of the ore<br>(b)Concentration of the ore (Physical and chemical)<br>(c)Treatment of the concentrated ore-Calcination and roasting<br>(d)Reduction-different methods: Smelting, Gold smith alumino thermic process, Kroll's process, Electrolytic reduction, Self reduction. (e ) Refining :Liquation, Distillation. | 2         |           |

|           |                               |  |           |           |
|-----------|-------------------------------|--|-----------|-----------|
|           | 13                            | Vapour Phase refining, Zone refining, Oxidative refining, Electrolytic refining, Poling, Cupellation, Parting process, Ion exchange method.  | 2         |           |
|           | 14                            | Ellingham diagrams for metal oxides – Extractive metallurgy of Fe, Ni and Ti.  | 3         |           |
|           | 15                            | Alloys: Definition – Composition and uses of German silver, Brass, Bronze, Gunmetal and Alnico. Steel: Open hearth process, Classification of steel, Composition and uses of alloy steels, Composition, Properties and Applications of industrially important stainless steel types, (AISI) (a brief study). | 2         |           |
| <b>IV</b> | <b>BIOINORGANIC CHEMISTRY</b> |  | <b>10</b> | <b>20</b> |
|           | 16                            | Discuss various elements present in the biological system, Essential and Non-essential elements, Metal ions in biological system, Trace and bulk metal ions, Role of alkali metal ions in biological systems, Sodium-potassium pump, Structural role of calcium.   | 2         |           |
|           | 17                            | Ligands present in biological systems, Structure of Porphyrin and Corrin.  | 1         |           |
|           | 18                            | Structure of heme - Oxygen transport by heme proteins, Hemoglobin and Myoglobin, Structure of the oxygen binding site, Nature of heme- dioxygen binding, Cooperativity.  | 2         |           |
|           | 19                            | Structure of Hemerythrin and Hemocyanin.   | 1         |           |
|           | 20                            | Metalloenzymes and Metal activated enzymes, Biochemistry of Zn – structure and functions of Carboxypeptidase, Carbonic Anhydrase, Biochemistry of Cobalt, Vitamin B 12 and Deficiency diseases.  | 2         |           |
|           | 21                            | Chlorophyll and Photosynthesis (mechanism not expected).   | 1         |           |
|           | 22                            | Anticancer drugs. Cis-platin, Oxaliplatin, Carboplatin and Auranofin – Structure and Significance.   | 1         |           |
| <b>V</b>  | <b>NUCLEAR CHEMISTRY</b>      |  | <b>12</b> |           |
|           | 23                            | The teacher can choose the important topics in the area nuclear chemistry: Nuclear stability, N/P ratio, Mass defect (numerical problems) , Packing Fraction, Binding Energy per Nucleons,   | 12        |           |

|  |   |  |  |
|--|---|--|--|
|  | <p>Radioactivity, Group displacement law, Disintegration series, Nuclear fission, Fusion, Reactors: Applications, RadioCarbon dating, Rock dating, Isotopes as tracers.</p> <p>Must cover Nuclear stability, n/p ratio, Fission, Fusion, Separation of isotopes, Application of isotopes.</p> |  |  |
|--|---|--|--|

| Pre-requisites | FCBSCHE2CJ102 and FCBSCHE4CJ205. The students must be familiar with the basic concepts in electrochemistry and must have taken NCERT plus-two chemistry course similar to <a href="https://onlinecourses.swayam2.ac.in/nce19_sc17/preview">https://onlinecourses.swayam2.ac.in/nce19_sc17/preview</a>  |                  |                   |                    |             |
| Course Summary | The chemical reactions tend to reach a state of dynamic equilibrium, i. e., the forward and reverse reactions occur at equal rates. This course introduces the underlying thermodynamic principles that can explain this state of equilibrium. Similarly, thermodynamics of phase transitions and phase equilibria are also explained as the second module. In the third module, electrochemical processes are explained which also involves thermodynamic concepts. In the fourth module, interaction of light with molecules and corresponding chemical as well as physical processes are explained. The final module consists of practical experiments related to these four important topics of chemistry. |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used |
|-----|--|------------------|---------------------|-----------------------|
| CO1 | To comprehend the concepts of law of mass action and chemical equilibria | U                | F                   | Assignment/Test       |

|   |   |    |   |                     |
|---|---|----|---|---------------------|
| CO2   | To understand various phase transitions, construction of phase diagram and its importance in industry                       | Ap | P | Assignment/Quiz     |
| CO3   | To apply the basic concepts of electrochemistry in constructing electrochemical cells                                       | Ap | P | Assignment/Quiz     |
| CO4   | To evaluate the pH of buffers, conduct potentiometric titrations and conductivity measurements                              | An | P | Lab work/Quiz       |
| CO5   | To know the theory and working of new generation electrochemical power storage systems                                      | U  | C | Assignment/Test     |
| CO6   | To understand the photochemical principles and to apply the unknown concentration a given sample solution using colorimetry | Ap | P | Discussion/Lab work |
| <p>* - Remember (R), Understand (U), Apply (Ap), Analyze (An), Evaluate (E), Create (C)</p> <p># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)</p> |   |    |   |                     |

### Detailed Syllabus:

| Module   | Unit                        | Content  | Hrs<br>(45+30) | Marks     |
|----------|-----------------------------|--|----------------|-----------|
| <b>I</b> | <b>CHEMICAL EQUILIBRIUM</b> |  | <b>10</b>      | <b>21</b> |
|          | 1                           | Law of mass action, thermodynamic derivation of law of chemical equilibrium.   | <b>1</b>       |           |
|          | 2                           | Relation between Gibbs free energy of reaction and reaction quotient.  | <b>1</b>       |           |
|          | 3                           | Equilibrium constants and their quantitative dependence on temperature, pressure and thermodynamic derivation of relations between the various equilibrium constants $K_p$ , $K_c$ and $K_x$ (using chemical potential). | <b>3</b>       |           |
|          | 4                           | Van't Hoff's equation - Le Chatelier principle and its application. Homogeneous and heterogenous equilibria. Clausius-Clapeyron equation - Applications to solid-liquid, Liquid-vapour, Solid- vapour equilibria         | <b>3</b>       |           |

|            |                          |  |           |           |
|------------|--------------------------|--|-----------|-----------|
|            | 5                        | Ionic equilibrium: Ionic product of water, pH and pOH, Buffer action, pH of buffer solutions   | 2         |           |
| <b>II</b>  | <b>PHASE EQUILIBRIUM</b> |  | <b>15</b> | <b>33</b> |
|            | 6                        | Concept of phase, Components and Degrees of freedom, Gibbs Phase Rule – Thermodynamic derivation.  | 3         |           |
|            | 7                        | Phase diagram for one component systems – Water, CO <sub>2</sub>   | 2         |           |
|            | 8                        | Two Component Systems - Phase diagrams for systems involving eutectic – KI/Ice – Freezing mixtures; Pattinson's process. Two-component systems with formation of congruent melting compound-MgZn <sub>2</sub> . Fractional distillation. Azeotropes.                   | 4         |           |
|            | 9                        | Partial miscibility of liquids, CST, Miscible pairs, steam distillation<br>Three component systems, water-chloroform-acetic acid system, triangular plots, tie lines   | 4         |           |
|            | 10                       | Nernst distribution law: its derivation and applications in solvent extraction.  | 2         |           |
| <b>III</b> | <b>ELECTROCHEMISTRY</b>  |  | <b>15</b> | <b>33</b> |
|            | 11                       | Electrochemical cells. Origin of electrode potentials-half cell potential-standard hydrogen electrode, reference electrodes  | 2         |           |
|            | 13                       | Electrochemical series, applications   | 1         |           |
|            | 14                       | Cell potential, Nernst equation for electrode and cell potentials. Nernst equation for electrode potential and EMF of a cell   | 2         |           |
|            | 15                       | Relationship between free energy and electrical energy. Gibbs Helmholtz equation to galvanic cells.  | 2         |           |
|            | 16                       | Concentration cells: Concentration cells with and without transference – Liquid junction potential (LJP).  | 2         |           |
|            | 17                       | Application of EMF measurements- Solubility of sparingly soluble salt, determination of pH, Potentiometric titrations  | 2         |           |
|            | 18                       | Electrochemical power storage and sources- Primary batteries- Dry cell, Storage batteries- Lead acid battery, Ni-Cd battery, Li-ion battery (basic idea only), Fuel cells- Hydrogen-Oxygen fuel cell, Electrochemical capacitors and supercapacitors (basic idea only) | 3         |           |
|            | 19                       | Corrosion of metals- electrochemical theory- Methods to prevent corrosion  | 1         |           |

| Pre-requisites | A good understanding of the concepts learned in the course, <b>FCBSCHE3CJ201 - Theoretical Chemistry 1 – Basics of Quantum Chemistry</b> - Postulates of quantum mechanics and related concepts, Application of these concepts to particle in a 1D box and 3D box.   |                  |                   |                    |             |
| Course Summary | In the course, <b>FCBSCHE3CJ201</b> , students learned the basic concepts of Quantum Chemistry including the postulates of quantum mechanics and also learned how to apply these concepts to different systems. This course further develops the concepts by applying them to other systems of chemical relevance. While doing so, the subject matter can be related to other application level topics like Molecular Spectroscopy and Group Theory. Students also realize that for systems having more than one electrons (atoms other than hydrogen and molecules) time-independent Schrodinger equation could not be exactly solved. To overcome this difficulty, excellent approximate techniques are formulated and they can be employed with the help of computer programmes for solving any system of chemical relevance. Thus students are equipped with the basic concepts and methods of a very significant research area called Computational Chemistry. Hands on experience in computational chemistry can be gained through the practical sessions given in module V. |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used |
|-----|---|------------------|---------------------|-----------------------|
| CO1 | <i>recall</i> the quantum mechanical postulates as the fundamental principles of quantum chemistry. | R                | F                   | Quiz/MCQ Test         |

|   |   |    |   |                                     |
|---|---|----|---|-------------------------------------|
| CO2   | <i>realize</i> the wave functions of hydrogen atom as atomic orbitals.  | U  | C | Assignment/Viva                     |
| CO3   | <i>apply</i> 1D Simple Harmonic Oscillator as a preliminary model for deriving the quantised energy levels of normal modes of vibration in molecules. | Ap | P | Class Test/Problem solving sessions |
| CO4   | <i>relate</i> particle on a sphere as a starting model for deducing the quantised energy levels of rotation in diatomic molecules.                    | An | P | Class Test/Problem solving sessions |
| CO5   | <i>justify</i> the use of approximate methods for deducing the wave functions and energy values of multi-electron systems.                            | E  | P | Class Test/Problem solving sessions |
| CO6   | <i>propose</i> computational methods for solving real world problems in chemistry   | C  | M | Assignment/Seminar                  |
| <p>* - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)</p> <p># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)</p> |   |    |   |                                     |

### Detailed Syllabus:

| Module   | Unit   | Content  | Hrs<br>(40+30) | Marks     |
|----------|--|--|----------------|-----------|
| <b>I</b> | <b>Quantum Mechanics of Vibrational and Rotational Motions</b> |  | <b>15</b>      | <b>31</b> |
|          | 1  | Review of the postulates of quantum mechanics.   | 1              |           |
|          | 2  | One-dimensional simple harmonic oscillator (complete treatment):- Method of power series, Hermite equation and Hermite polynomials, recursion relation, wave functions and their plots, energy eigenvalues, important features of the problem, harmonic oscillator model and molecular vibrations. | 3              |           |
|          | 3  | Cartesian and spherical polar coordinates and their relationships.   | 1              |           |
|          | 4  | Planar rigid rotor (or particle on a ring), the Phi-equation, solution of the Phi-equation.  | 2              |           |
|          | 5  | One particle Rigid rotator (non-planar rigid rotator or particle on a sphere) (complete treatment): The wave   | 3              |           |

|            |   |   |           |           |
|------------|---|---|-----------|-----------|
|            |   | equation in spherical polar coordinates, separation of variables, the Phi-equation and the Theta-equation and their solutions, Legendre and Associated Legendre equations, Legendre and Associated Legendre polynomials.  |           |           |
|            | 6   | Spherical harmonics (imaginary and real forms), polar diagrams of spherical harmonics.  | 2         |           |
|            | 7   | Quantization of angular momentum, space quantization, quantum mechanical operators corresponding to angular momenta ( $\hat{L}_x, \hat{L}_y, \hat{L}_z, \hat{L}^2$ ), commutation relations between these operators, Ladder operator method for angular momentum.   | 3         |           |
|            |   | Sections from References: <b>Section A</b>  |           |           |
| <b>II</b>  | <b>Quantum Mechanics of Hydrogen-like Atoms</b>   |   | <b>10</b> | <b>25</b> |
|            | 8   | Potential energy of hydrogen-like systems, the wave equation in spherical polar coordinates, separation of variables, the R, Theta and Phi equations and their solutions, Laguerre and associated Laguerre polynomials, atomic orbitals/wave functions of hydrogen-like atoms and their corresponding energy. | 4         |           |
|            | 9   | Radial and angular parts of atomic orbitals - Radial functions and radial plots, radial distribution functions and their plots, angular functions (spherical harmonics) and their plots.  | 2         |           |
|            | 10  | The postulate of spin by Uhlenbeck and Goudsmith - Spin orbitals, construction of spin orbitals from orbitals and spin functions.   | 2         |           |
|            | 11  | Pauli's principle of anti-symmetric wave functions - Slater determinants.   | 2         |           |
|            |   | Sections from References: <b>Section A</b>  |           |           |
| <b>III</b> | <b>Approximation Methods in Quantum Mechanics</b> |   | <b>12</b> | <b>28</b> |
|            | 12  | Many body problem and the need of approximation methods;  | 1         |           |
|            | 13  | Independent particle model – Application to the ground state of helium atom.  | 1         |           |
|            | 14  | Variation method – Variation theorem with proof, illustration of variation theorem using the trial function x   | 3         |           |

|  |  |   |           |           |
|--|--|---|-----------|-----------|
|  |  | (a-x) for particle in a 1D-box, variation treatment of the ground state of helium atom.   |           |           |
|  | 15   | Perturbation method – Time-independent perturbation method (non-degenerate case only), perturbation treatment of the ground state of helium atom.   | 3         |           |
|  | 16   | Hartree’s Self-Consistent Field method for atoms, Fock modification using spin orbitals & Hartree -Fock Self-Consistent Field (HF-SCF) method for atoms, the Fock operator;   | 4         |           |
| Sections from References: <b>Section A</b> |  |   |           |           |
| <b>IV</b>                                  | <b>Introduction to Computational Chemistry</b> |   | <b>8</b>  | <b>14</b> |
|  | 17   | Classification of Computational Chemistry methods – Molecular mechanics methods (the concept of the force field) and Electronic structure methods, ab initio and semi-empirical methods (Basic idea only).  | 2         |           |
|  | 18   | Roothan’s concept of basis functions - Slater type orbitals (STO) and Gaussian type orbitals (GTO).   | 1         |           |
|  | 19   | Concept of electron correlation and post HF methods. (Elementary idea)  | 1         |           |
|  | 20   | Basis set approximation in ab initio methods - classification of basis sets – minimal, double zeta, triple zeta, split-valence, polarization & diffuse basis sets, Pople-style basis sets, and their nomenclature.  | 2         |           |
|  | 21   | Gaussian programme – The structure of a Gaussian input file, Types of keywords.   | 1         |           |
|  | 22   | Specification of molecular geometry using a) Cartesian coordinates and b) Internal coordinates. The Z-matrix, Z-matrices of some simple molecules like H <sub>2</sub> , H <sub>2</sub> O, HCHO and NH <sub>3</sub> .  | 1         |           |
| Sections from References: <b>Section B</b> |  |   |           |           |
| <b>V</b>                                   | <b>Computational Chemistry Practical</b>       |   | <b>30</b> |           |
|  | 1  | 1. Single point energy calculations of simple molecules like H <sub>2</sub> O and NH <sub>3</sub> at the HF/3-21G level of theory.<br>2. The effect of basis set on the single point energy of H <sub>2</sub> O and NH <sub>3</sub> using the Hartree-Fock method (3-21G, 6-31G, 6-31+G, 6-31+G* basis sets can be used). | 10        |           |

|  |                     |  |   |  |
|--|---------------------|--|---|--|
|  |                     | 3. Geometry optimization of molecules like H <sub>2</sub> O, NH <sub>3</sub> , HCHO & C <sub>2</sub> H <sub>4</sub> at the HF/6-31G level of theory.<br>4. Computation of dipole and quadrupole moments of HCHO & C <sub>2</sub> H <sub>4</sub> at the HF/6-31G level of theory.   |   |  |
|  | 2                   | 5. Effect of basis set on the computation of H-O-H bond angle in H <sub>2</sub> O using the HartreeFock method (3-21G, 6-31G, 6-31+G, 6-31+G* basis sets can be used).<br>6. Computation of the energy of HOMO and LUMO of formaldehyde and ethylene at the HF/6-31G level of theory.<br>7. Effect of substituent (F & Cl) on the geometric parameters (like C-C bond length) of ethylene at the HF/6-31G level of theory. | 8 |  |
|  | 3                   | 8. Comparison of stability of cis-planar and trans-planar conformers of H <sub>2</sub> O <sub>2</sub> at the HF/6-31G level of theory.<br>9. Comparison of stability of cis- and trans-isomers of difluoroethylene at the HF/6-31G* level of theory.   | 6 |  |
|  | <b>Open - ended</b> | <ul style="list-style-type: none"> <li>• Determination of hydrogen bond strength of H<sub>2</sub>O dimer and H<sub>2</sub>O trimer at the HF/6-31+G* level of theory.</li> <li>• Computation of the frequencies of normal modes of vibration of molecules like H<sub>2</sub>O, NH<sub>3</sub> and CO<sub>2</sub> at the HF/6-31+G* level of theory.</li> </ul>   | 6 |  |
| Sections from References: <b>Section C</b> |                     |  |   |  |

| Pre-requisites | Theories of acids and bases, Bonding in diborane, Atomic number, mass number, isotopes, Basic idea about nuclear radioactivity, Nuclear fission and fusion, Basic concepts in Coordination Chemistry, Knowledge about magnetic properties of complexes  |                     |                      |                       |             |
| Course Summary | <p>This course enables the students to develop knowledge about HSAB principle, Concepts of superacids, Bonding and structure in higher boranes.</p> <p>It deals with detailed nuclear shell models, Nuclear reactions, Neutron activation analysis and Radiation chemistry</p> <p>It covers the electronic spectra of complexes and explanation of d-d transition</p> <p>It gives understanding about the various magnetic properties and its calculation</p> <p>It enables the students to familiarise with various spectral techniques that is used to characterise the metal complexes like ESR, NMR and Mossbauer</p> <p>It covers the different types of reactions that takes place in complexes and their explanations</p> <p>This course enables the students to apply knowledge in the qualitative analysis of mixture of ions and develop skill for separation and estimation of mixture of ions</p> |                     |                      |                       |             |

**Course Outcomes (CO):**

| <b>CO</b>  | <b>CO Statement</b>  | <b>Cognitive Level*</b> | <b>Knowledge Category#</b> | <b>Evaluation Tools used</b>                                  |
|--|--|-------------------------|----------------------------|---|
| CO1  | Demonstrate a deep understanding of HSAB principle, Super acid concepts and bonding structure in higher boranes and boron cluster compounds.                           | U                       | C                          | Instructor-created exams / Assignments/Quiz                   |
| CO2  | Explain detailed nuclear shell models, nuclear reactions, neutron activation analysis and radiation chemistry.   | U                       | C                          | Instructor-created exams / Assignments/ seminar presentations |
| CO3  | Comprehend electronic spectra of complexes and understand various magnetic properties of complexes.  | U                       | C                          | Class test /Assignment / seminar/Quiz                         |
| CO4  | Grasp the reactions of coordination compounds, the mechanisms and apply theoretical understandings.  | Ap                      | C                          | Assignment/Seminar/Test                                       |
| CO5  | To understand chemistry of excited state coordination compounds  | U                       | C                          | Assignment/Seminar/ Test                                      |
| CO6  | Apply practical skills in the analysis of mixture of metal ions, specifically rare earth elements and separation and estimation of binary mixture of ions in solution. | An                      | P                          | Viva Voce/Observation of practical skill                      |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) |  |                         |                            |   |

**Detailed Syllabus:**

| <b>Module</b> | <b>Unit</b>   | <b>Content</b>  | <b>Hrs<br/>(45+30)</b> | <b>Marks</b> |
|---------------|---|---|------------------------|--------------|
| <b>I</b>      | <b>ACID BASE CONCEPTS AND COMPOUNDS OF BORON</b>                  |   | <b>10</b>              | <b>21</b>    |
|               | 1   | Classification of acids and bases as Hard and Soft  | 1                      |              |
|               | 2   | HSAB principle. The theoretical basis of hardness and softness  | 1                      |              |
|               | 3   | The Drago-Wayland equation, E and C parameters- Symbiosis, Applications of HSAB concept, Super acids  | 2                      |              |
|               | 4   | Electron-deficient compounds- Boron hydrides- Preparation, Reactions, Structure, and Bonding. Styx numbers-Closo, nido, arachno polyhedral structures.                        | 3                      |              |
|               | 5   | Boron cluster compounds-Wade's rule, Polyhedral borane anion- Carboranes, Metallaboranes and Metallacarboranes.   | 3                      |              |
| <b>II</b>     | <b>NUCLEAR AND RADIATION CHEMISTRY</b>                            |   | <b>7</b>               | <b>16</b>    |
|               | 6   | Structure of nucleus: Shell, liquid drop, Fermi gas, Collective and Optical models. Nuclear reaction: Bethe's notation of nuclear process                                     | 2                      |              |
|               | 7   | Types- Reaction cross section, Photonuclear and Thermonuclear reactions. Nuclear fission: Theory of fission, Neutron capture cross section and Critical size, Nuclear fusion. | 2                      |              |
|               | 8   | Neutron activation analysis.  | 1                      |              |
|               | 9   | Detection and measurement of radiation- GM and Scintillation counters, Radiolysis of water, Radiation hazards, Radiation dosimetry.   | 2                      |              |
| <b>III</b>    | <b>SPECTRAL AND MAGNETIC PROPERTIES OF COORDINATION COMPOUNDS</b> |   | <b>18</b>              | <b>40</b>    |
|               | 10  | Spectroscopic ground state, Terms for $d^n$ configuration, Selection rule for d-d transition, Effect of ligand field on R S terms, $O_h$ and $T_h$ complexes.                 | 2                      |              |

|           |  |   |           |           |
|-----------|--|---|-----------|-----------|
|           | 11   | Orgal diagram, Spectra of 3d ( $d^1, d^2, d^3$ ) metal ions complexes, Racah parameter, Charge transfer parameter ( LMCT. MLCT ) with example.  | 2         |           |
|           | 12   | Types of Magnetic properties: Paramagnetism and Diamagnetism, Curie and Curie- Weiss laws. The $\mu_J$ , $\mu_{L+S}$ , and $\mu_S$ expressions..  | 2         |           |
|           | 13   | Orbital contribution to magnetic moment and its quenching, Spin-orbit coupling, Temperature independent Paramagnetism, Anti ferromagnetism- Types and exchange pathways. Determination of magnetic moment by Gouy method.                                     | 3         |           |
|           | 14   | ESR spectra – Application to copper complexes.  | 3         |           |
|           | 15   | NMR spectroscopy for structural studies of diamagnetic metal complexes from chemical shift and spin- spin coupling.   | 3         |           |
|           | 16   | Mossbauer spectroscopy- the Mossbauer Effect, Hyperfine interactions (qualitative treatment). Application to Iron and Tin compounds   | 3         |           |
| <b>IV</b> | <b>REACTIONS OF COORDINATION COMPOUNDS</b> |   | <b>10</b> | <b>21</b> |
|           | 17   | Ligand substitution reactions, Labile and Inert complexes, Rate law, Classification of mechanisms- D, A and I mechanisms. Substitution reactions in Octahedral complexes.   | 2         |           |
|           | 18   | The Eigen-Wilkins Mechanism. Fuoss-Eigenequation. Aquation and base hydrolysis- Mechanism. Substitution reactions in square planar complexes  | 2         |           |
|           | 19   | The Trans effect- Applications and theories of Trans effect, The cis effect.  | 1         |           |
|           | 20   | Classification of redox reaction mechanisms. Outer sphere and Inner sphere mechanisms, Marcus equation, Effect of the bridging ligand.  | 1         |           |
|           | 21   | Methods for distinguishing outer- and inner-sphere redox reactions, Photochemical reactions of metal complexes.   | 2         |           |
|           | 22   | Prompt and delayed reactions, Excited states of metal complexes- Inter ligand, ligand field, charge transfer, and delocalized states<br>Properties of ligand field excited states. Photosubstitution- Prediction of substitution lability by Adamson`s rules. | 2         |           |

|   |   |   |             |  |
|---|---|---|-------------|--|
| V | <b>QUALITATIVE MIXTURE ANALYSIS INCLUDING LESS COMMON CATIONS and ESTIMATION OF BINARY MIXTURES</b> |   | <b>15*2</b> |  |
|   | 23  | <p><b>1. Inorganic Cation Mixture Analysis</b></p> <p>Separation and identification of four metal ions including less common elements like W, Se Te, Mo, Ce, , Zr, V, and Li. (Eliminating acid radicals not present). Confirmation by Spot tests.</p> <p><b>0. Estimation of ions in mixture (Open ended)</b></p> <p>a) Separation and estimation of binary mixtures of ions in solution [<math>\text{Cu}^{2+}</math>, <math>\text{Ni}^{2+}</math>, <math>\text{Fe}^{2+}</math>, <math>\text{Ca}^{2+}</math>, <math>\text{Mg}^{2+}</math> and <math>(\text{Cr}_2\text{O}_7)^{2-}</math>] by volumetric, colorimetric or gravimetric methods. Only one of the components to be estimated. Any two combinations can be performed</p> | <b>(30)</b> |  |

| Course Summary | This course explores the basics of stereochemistry, C-C bond formation, photochemistry, free radical mechanisms, organic reactions and reagents. |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used  |
|-----|---|------------------|---------------------|------------------------|
| CO1 | To understand and apply concepts of stereochemistry, conformations and asymmetric synthesis                     | U                | C                   | Test /Seminar          |
| CO2 | To apply principles of physical organic chemistry including acidity, basicity and reaction mechanisms           | U                | p                   | Discussion/ Assignment |
| CO3 | To demonstrate ability to generate carbanions and conduct a variety of condensation and other organic reactions | An               | P                   | Quizzes/Test           |

|   |   |    |   |                                |
|---|---|----|---|--------------------------------|
| CO4   | To analyze the role of photochemistry in chemical reactions and apply concepts to radical chain reactions | Ap | P | Discussion/Seminar /Assignment |
| CO5   | To Conduct common organic reactions and apply select reagents in redox and substitution reactions         | Ap | P | Assignment/Test                |
| CO6   | To empower students in setting up the reaction and purification process                                   | Ap | P | Lab work/Viva                  |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |   |    |   |                                |

### Detailed Syllabus:

| Module     | Unit                              | Content   | Hrs       | Marks     |
|------------|-----------------------------------|---|-----------|-----------|
| <b>I</b>   | <b>Stereochemistry III</b>        |   | <b>13</b> | <b>28</b> |
|            | 1                                 | Optical isomerism shown by molecules have stereocenters other than C, N, P, S. Axial chirality - Planar chirality and helicity. Nomenclature - Prochirality, Re, Si Nomenclature.                               | 3         |           |
|            | 2                                 | Stereoselective and stereospecific reaction - Effect of configuration on Substitution - Addition and Elimination reactions.   | 2         |           |
|            | 3                                 | Conformations of 1,2 disubstituted compounds - Carbonyl compounds - Mono and disubstituted cyclohexanes, A-value -Decalin, Bridged bicyclic systems, Anomeric effect, The effect of conformation on reactivity. | 4         |           |
|            | 4                                 | Asymmetric synthesis: - Resolution methods - Chiral pool approach - Chiral auxiliary approach - Chiral reagents - Chiral catalyst. (SAMP/RAMP method - Sharpless epoxidation)                                   | 4         |           |
| <b>II</b>  | <b>Physical Organic Chemistry</b> |   | <b>10</b> | <b>22</b> |
|            | 5                                 | Acidity and basicity of organic compounds - Equilibrium - Rate- Rate limiting step - Intermediates and transition states, Reaction profile diagrams, Kinetic and Thermodynamic control of reactions.            | 5         |           |
|            | 6                                 | Hammond postulate Curtin-Hammett principle.   | 1         |           |
|            | 7                                 | Methods of determining Reaction Mechanisms  | 1         |           |
|            | 8                                 | Isotopic labeling, Kinetic isotopic effects, Crossover studies, Detection of intermediates  | 3         |           |
| <b>III</b> | <b>Formation of C-C bonds</b>     |   | <b>13</b> | <b>28</b> |

|           |  |  |           |           |
|-----------|--|--|-----------|-----------|
|           | 9  | Generation of carbanions from carbonyl compounds, Lithium enolates, Enamines and Silyl enol ethers, O and C-alkylation.  | 2         |           |
|           | 10   | Cram's rule and Felkin Ahn model   | 2         |           |
|           | 11   | Aldol condensation from enolates - Enamine and silyl enol ethers, Mukyamma aldol reaction - Zimmerman Traxler model, Intramolecular reactions.   | 3         |           |
|           | 12   | Claisen condensation - Perkin Reaction - Knoevenagel reaction, Conjugate addition  | 2         |           |
|           | 13   | Robinson annulation - Wittig and related reactions, Reactions of enols - Acid-mediated reactions of aldehydes and ketones.   | 2         |           |
|           | 14   | <b>Organometallic reagents-</b> Grignard reagents - Alkyl lithium agents, Preparation and its reaction with carbonyl compounds and nitriles.   | 2         |           |
| <b>IV</b> | <b>Photochemistry and free radical reactions</b> |  | <b>9</b>  | <b>20</b> |
|           | 15   | <b>Photochemistry:</b> Fate of an excited molecule - Chemical reactions of excited molecules,  | 1         |           |
|           | 16   | Photochemistry of carbonyl compounds: Norrish type I and II cleavage – $\alpha$ -cleavage, $\gamma$ -hydrogen abstraction, Paterno Buchi reaction.   | 2         |           |
|           | 17   | Isomerization (cis-trans isomerization in retina, isomerization in benzene), Photosensitization, Di-pi-methane rearrangement, Oxa-di-pi-methane rearrangement.   | 2         |           |
|           | 18   | <b>Free radical reactions:</b> Radical chain reaction, NBS allylic bromination, Acyloin reaction, HLF reaction, Hunsdiecker-Borodin reaction   | 2         |           |
|           | 19   | Generation of C radicals from alkyl halides using AIBN-tributyltin hydride and their cyclizations (5-exo mode only). Radical inhibitors, methods of detecting radical intermediates.   | 2         |           |
| <b>V</b>  | <b>Practicals</b>                                |  | <b>30</b> |           |
|           | 1.   | <b>Introduction to organic lab</b>   | 4         |           |
|           | 2.   | 1. Double stage preparations (iodobenzene from aniline/benzil benzilic acid/triphenyl imidazole and its dimerization/ Hydroquinone-benzoquinone anthracene/ caprolactam/ bromoaniline from acetanilide or any reaction based on oxidation/reduction/condensation/rearrangement (purification of the prepared compounds by recrystallization and measurement of melting point)<br><br>2. Column chromatography<br>3. Steam distillation | 20        |           |

|  |   |                              |   |  |
|--|---|------------------------------|---|--|
|  |   | 4. Thin layer chromatography |   |  |
|  | 3 | Open ended                   | 6 |  |

| Course Summary | This course provides a thorough overview of essential analytical techniques in chemistry and materials science, covering separation, spectroscopy, surface characterization, and thermal/electroanalytical methods. The course emphasizes practical applications, preparing students for precise chemical analysis in various scientific and industrial fields. The practical module ensures hands-on-training on some of the important methods. |                  |                   |                    |             |

| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |   |    |   |                                   |

### Detailed Syllabus:

| Module    | Unit                                     | Content   | Hrs       | Marks     |
|-----------|--|---|-----------|-----------|
| <b>I</b>  | <b>Separation techniques</b>             |   | <b>6</b>  | <b>10</b> |
|           | 1  | Brief outline of Paper and Thin-Layer Chromatography (TLC),   | 1         |           |
|           | 2  | Ion exchange chromatography: Principle, cation and anion exchange resins, its application in separation of ions.  | 1         |           |
|           | 3  | Gas Chromatography (GC) – Principle, GC Instrumentation – Injectors, column, detectors (TCD, FID, ECD) and applications.  | 1         |           |
|           | 4  | Hyphenated GC Technique - GC-MS   | 1         |           |
|           | 5  | High Performance Liquid Chromatography (HPLC): Principle, instrumentation - Column, stationary phases, column packing, mobile phase, detectors. Effects on Separation of Composition of the Mobile Phase and applications   | 2         |           |
| <b>II</b> | <b>Spectroscopic and related methods</b> |   | <b>15</b> | <b>36</b> |
|           | 6  | UV-Visible Spectrometry: Beer-Lambert's law, Basic principles of instrumentation (choice of source, monochromator and detector) for single and double beam instruments. Difference between Colorimeter & spectrophotometer.   | 2         |           |
|           | 7  | Flame emission and Atomic Absorption Spectroscopy (AAS): Introduction, principle. Instrumentation and Analytical applications. Inductively Coupled Plasma-Atomic/Optical emission spectroscopy (ICP-AES or ICP-OES)- theory, instrumentation and applications. ICP-MS method. Analytical Applications | 3         |           |
|           | 8  | Fourier transform-Infrared spectroscopy (FT-IR)- FT-IR instrumentation and analytical applications.<br>Raman spectroscopy, Principle, instrumentation, Surface enhanced Raman Spectroscopy (SERS), Raman microscopy   | 3         |           |

|            |  |  |           |           |
|------------|--|--|-----------|-----------|
|            | 9  | Fluorescence spectroscopy, Theory, Instrumentation and Analytical applications, Confocal laser-scanning microscopy   | 2         |           |
|            | 10   | FT-NMR spectroscopy, basic principle, instrumentation, spectrometers with different frequencies of operation, ESR/EPR spectroscopy, ENDOR (Electron-Nuclear double resonance) technique  | 3         |           |
|            | 11   | Mass spectrometry, Instrumentation and applications, MALDI-TOF method and instrumentation  | 2         |           |
| <b>III</b> | <b>Microscopy, Photoelectron spectroscopy and X-ray diffraction techniques</b> |  | <b>14</b> | <b>32</b> |
|            | 12   | Scanning Electron Microscopy (SEM) Instrumentation, Operating Principle, Secondary - Electron Images, Backscattered- Electron Images, operating conditions and sample preparation.   | 2         |           |
|            | 13   | Transmission Electron Microscopy (TEM): Instrumentation, General Design, Resolution, Electron Sources, TEM grids, electron lenses, Bright and Dark field images, Applications.   | 2         |           |
|            | 14   | Scanning probe microscopy methods: Principle, instrumentation and applications of Scanning Tunneling Microscopy (STM) and Atomic Force Microscopy (AFM).   | 3         |           |
|            | 15   | Photoelectron Spectroscopy Techniques - X-Ray Photoelectron Spectroscopy - Instrumentation for XPS, Sample Introduction and Handling for Surface Analysis, Analytical Applications of XPS, Auger Electron Spectroscopy – Instrumentation and Applications. | 3         |           |
|            | 16   | Powder and Single crystal X-ray diffraction, basic principle, instrumentation and applications.  | 4         |           |
| <b>IV</b>  | <b>Thermal and Electroanalytical methods of analysis (12 h)</b>                |  | <b>10</b> | <b>20</b> |
|            | 17   | Thermogravimetry - TGA Instrumentation, Analytical Applications of Thermogravimetry, Derivative Thermogravimetry, Sources of Error in Thermogravimetry.  | 2         |           |
|            | 18   | Differential Thermal Analysis (DTA) - Instrumentation - Analytical Applications of DTA.  | 1         |           |
|            | 19   | Differential Scanning Calorimeter (DSC), Instrumentation and applications.   | 1         |           |
|            | 20   | Classification of electroanalytical methods, Potentiometry- Three and Two electrode systems, Types of indicator Electrodes. Analytical Applications of Potentiometry.  | 2         |           |
|            | 21   | Coulometry – Electrogravimetry, Instrumentation for Electrogravimetry and Coulometry, Applied Potential, Analytical Determinations Using Faraday's Law.  | 2         |           |

|          |                   |  |           |  |

| Course Summary | This course explains in detail the structure, bonding and reactions of organometallic compounds. It deals with the bonding in metal carbonyls and provides application skill in evaluating the bonding and structural characteristics of metal carbonyls using IR spectroscopy. It identifies the application of organometallic compounds. It describes different organometallic polymers. It evaluates bioinorganic compounds and their biological actions |                     |                      |                       |             |

### Detailed Syllabus:

| Module    | Unit                                  | Content   | Hrs       | Marks     |
|-----------|---------------------------------------|---|-----------|-----------|
| <b>I</b>  | <b>Common rearrangement reactions</b> |   | <b>8</b>  | <b>18</b> |
|           | 1                                     | Rearrangement to electron deficient Carbon-Wagner - Meerwin rearrangement, Pinacol-Pinacolone rearrangement, Tiffeneau-Demjanov, Dienol-Phenol.   | 2         |           |
|           | 2                                     | Rearrangement to electron-deficient Nitrogen - Beckmann, Lossen, Hofmann, Curtius.  | 2         |           |
|           | 3                                     | Rearrangement to electron-deficient Oxygen - Baeyer-Villiger, Dakin reaction.   | 2         |           |
|           | 4                                     | Acyl carbene rearrangements - Wolff, Arndt-Eistert synthesis.   | 1         |           |
|           | 5                                     | Anionic rearrangements - Favorskii and Benzilic acid rearrangements.  | 1         |           |
| <b>II</b> | <b>Pericyclic reactions</b>           |   | <b>11</b> | <b>24</b> |
|           | 6                                     | Electrocyclic reaction – ring-opening reaction and ring closure reactions in butadiene and hexatriene, con rotation and disrotation of HOMO and LUMO of butadiene and hexatriene for product formation. | 2         |           |
|           | 7                                     | Cycloaddition reactions - 2+2 and 4+2 cycloadditions – antarafacial and suprafacial additions, Examples for thermal and photochemical cyclo addition reactions.   | 2         |           |
|           | 8                                     | Diels alder reaction - dienes and dienophiles in Diels alder reaction, distereoselectivity, hetero Diels-Alder reaction.  | 2         |           |
|           | 9                                     | Dipolar cycloaddition - Huisgen cycloaddition, Click chemistry (azide-alkyne cycloaddition as example).   | 1         |           |

|            |  |   |           |           |
|------------|--|---|-----------|-----------|
|            | 10   | Sigmatropic rearrangement - Sigmatropic rearrangements: 1,3 and 1,5 and 1,7 shifts of hydrogen atoms (explanation based on frontier molecular orbitals).  | 2         |           |
|            | 11   | Cope rearrangement and Claisen rearrangement, 2,3-rearrangement, chelotropic reaction, FMO and Moebius-Hückel Approach.   | 2         |           |
| <b>III</b> | <b>UV-Visible-spectroscopy and Mass spectrometry</b> |   | <b>13</b> | <b>28</b> |
|            | 12   | UV-Visible-spectroscopy- basic principles, Factors affecting redshift and blueshift, $\lambda_{\max}$ calculation for dienes and $\alpha,\beta$ -unsaturated carbonyl compounds and polyenes.   | 3         |           |
|            | 13   | IR spectroscopy- basic principles, Factors affecting absorption frequencies, Fingerprint and functional group region.   | 2         |           |
|            | 14   | IR spectra of functional groups-alkenes, Alkynes, Aromatic compounds, Alcohols, Phenols, Carbonyl, Carboxylic acid derivatives, nitro, cyano, sulfoxide.  | 2         |           |
|            | 15   | Mass spectrometry- Theory, Molecular ion peak, Fragment ions, Molecular mass determination, Metastable ion.   | 3         |           |
|            | 16   | Isotopic effect, N Rule, Index of hydrogen deficiency, McLafferty rearrangement, Ionization methods.  | 3         |           |
| <b>IV</b>  | <b>NMR Spectroscopy</b>                              |   | <b>13</b> | <b>28</b> |
|            | 17   | NMR Spectroscopy - Basic principles, Chemical shift values in low resolution spectra  | 3         |           |
|            | 18   | High resolution H NMR spectra: Spin-spin splitting, Pascals triangle for Splitting patterns and calculation of coupling constant, Factors affecting coupling constant   | 3         |           |
|            | 19   | Interpretation of $^1\text{H}$ NMR and $^{13}\text{C}$ NMR spectra of simple organic molecules  | 3         |           |
|            | 20   | Structure elucidation of simple organic compounds using UV, IR and $^1\text{H}$ NMR spectroscopic techniques.   | 4         |           |
| <b>V</b>   | <b>Practicals</b>                                    |   | <b>30</b> |           |
|            | 1.   | Introduction to organic lab   | 4         |           |
|            | 2  | <ol style="list-style-type: none"> <li>1. Estimation of aniline/phenol</li> <li>2. Estimation of glucose organic compounds by colorimetry</li> <li>3. Estimation of drug molecules by titration/colorimetry</li> <li>4. Double stage preparations (Synthesis of dihydroxy triptycene from anthracene and hydroquinone, reductive amination and its structure analysis) - any one</li> <li>5. Cannizzaro reaction of p-chlorobenzaldehyde and isolation of products</li> </ol> | 20        |           |

|  |   |  |   |  |
|--|---|--|---|--|
|  |   | 6. Column chromatography<br>7. Identification of unknown molecule via spectroscopic analysis (measure the spectra and analyse if the instruments are accessible, otherwise analyse the provided the spectra) |   |  |
|  | 3 | Open ended   | 6 |  |

| Pre-requisites | <p>Preliminary ideas about structure and bonding in solids, Physical properties of solids, Dynamic electrochemistry, Solid surfaces: Adsorption and heterogenous catalysis</p> <p>It is desirable for the students to familiarise with the previous physical and theoretical chemistry courses, FCBSCHE2CJ102, FCBSCHE3CJ201, CHHE4CJ205, FCBSCHE5CJ301, FCBSCHE6CJ306, FCBSCHE7CJ401, and FCBSCHE7CJ401</p>  |                  |                   |                    |             |
| Course Summary | <p>Physical properties of solids are intriguing and they are of huge technological interest. In fact, our everyday life in the modern times is intimately connected to these exciting solid materials. First two modules of this course are designed to appreciate the science of structure-property relations in solids. The third module deals with the kinetics of electrochemical processes and basic idea of some electroanalytical methods. The fourth module gives a deeper insight to the importance of surface of solids in heterogeneous catalysis.</p> |                  |                   |                    |             |

**Course Outcomes (CO): .**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used    |
|-----|---|------------------|---------------------|--------------------------|
| CO1 | To understand the importance of structure and bonding in solids                   | U                | C                   | Test /Seminar/Assignment |
| CO2 | To analyse and correlate the structure with various physical properties in solids | Ap               | P                   | Test /Seminar/Assignment |
| CO3 | To comprehend the concepts of equilibrium electrochemistry                        | U                | F                   | Test /Seminar/Assignment |

|   |  |    |   |                          |
|---|--|----|---|--------------------------|
| CO4   | To apply the knowledge of electrode kinetics in electrochemical processes and electroanalytical techniques | Ap | P | Test /Seminar/Assignment |
| CO5   | To understand theory of multilayer adsorption of molecules on solid surfaces                               | U  | C | Test /Seminar/Assignment |
| CO6   | To apply the knowledge of adsorption for the development of heterogeneous catalysts                        | Ap | P | Test/Labwork/Viva        |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |  |    |   |                          |

### Detailed Syllabus:

| Module    | Unit                                   | Content   | Hrs       | Marks     |
|-----------|--|---|-----------|-----------|
| <b>I</b>  | <b>STRUCTURE AND BONDING IN SOLIDS</b> |   | <b>12</b> | <b>26</b> |
|           | 1                                      | Ionic bonding, radius ratio rules and structure of simple Ionic solids (NaCl, KCl, CsCl, ZnS, NiAs, CaF <sub>2</sub> etc.), Partial covalent bonding in solids, Perovskite and Spinel-type structures   | 2         |           |
|           | 2                                      | Qualitative MO diagram of hypothetical cyclic molecules of Hydrogen- H <sub>2</sub> , H <sub>4</sub> , H <sub>5</sub> , H <sub>6</sub> , .... H <sub>n</sub> . Orbital interactions in solids and Band theory as applied to hypothetical one dimensional H-atom crystal, Brillouin zone, Band dispersion curves, Density of States (DOS), The Fermi level | 2         |           |
|           | 3                                      | Band width and nature of band dispersion and DOS in 1D H-atom crystal with varying H-H distances, Peirls distortion, Crystal orbital overlap population,  | 2         |           |
|           | 4                                      | Band dispersion curves of 1D- chain of <i>p</i> - and <i>d</i> orbitals (1D-chain of eclipsed PtL <sub>4</sub> complexes), Band theory extended to two dimensions- 1s orbitals, sigma and pi-interactions of 2 <i>p</i> orbitals  | 2         |           |
|           | 5                                      | Band structure of 3D solids: Qualitative idea of band gap,, direct and indirect band gaps, metals, insulators and semiconductors, Ohm's law, definition of resistivity and conductivity of solids, Topological Insulators (basic idea only)   | 2         |           |
|           | 6                                      | Bandwidth and its slope, electrical conductivity in solids and charge carriers, electrons and holes, mobility of charge carriers, charge carrier concentration, effective mass, concept of polarons, Structure-property relation in solids  | 2         |           |
| <b>II</b> | <b>PHYSICAL PROPERTIES OF SOLIDS</b>   |   | <b>12</b> | <b>26</b> |
|           | 7                                      | Semiconductors: p- and n-type doping, transistors- Photovoltaic effect and Solar energy conversion  | 3         |           |

|            |                                 |  |           |           |
|------------|---------------------------------|--|-----------|-----------|
|            |                                 | materials, Examples: Si, CuInSe <sub>2</sub> , and Methylammonium lead bromide, Solar cells<br>Thermoelectric materials for heat to electricity direct conversion, Seebeck and Peltier effects, Examples: Bi <sub>2</sub> Te <sub>3</sub> , PbTe   |           |           |
|            | 8                               | Dielectrics, Ferroelectrics, Ferroelectricity in BaTiO <sub>3</sub> , Piezoelectrics, Piezoelectricity in (Pb,Zr)TiO <sub>3</sub> , Transducers  | 2         |           |
|            | 9                               | Optical properties of solids: Luminescence and phosphors, Lasers- Ruby Laser, Semiconducting lasers, Light emitting diodes (LED)   | 2         |           |
|            | 10                              | Magnetic materials: Theory and examples of Ferromagnetic, Antiferromagnetic, and Ferrimagnetic materials, Classification of Hard and Soft magnets with examples, their crystal structures and their uses, Ferrites, Nd <sub>2</sub> Fe <sub>14</sub> B, SmCo <sub>5</sub> , Multiferroics and examples | 2         |           |
|            | 11                              | Superconductivity, BCS theory, Critical temperature and critical field, Type-1 and Type-2 superconductors, Meissner effect, Oxide-based superconductors.   | 3         |           |
| <b>III</b> | <b>DYNAMIC ELECTROCHEMISTRY</b> |  | <b>18</b> | <b>30</b> |
|            | 12                              | The nature of electrolytes, Ion activity, Ion-ion and ion-solvent interaction, The electrical potential in the vicinity of an ion- Ionic thickness.  | 2         |           |
|            | 13                              | The Debye-Hückel equation (derivation), Limiting and extended forms of the Debye- Hückel equation, Applications of the Debye-Hückel equation to calculate the effect of ionic strength on ion reaction rates in solution - Primary and secondary salt effect   | 3         |           |
|            | 14                              | Electrical double layer: Helmholtz -Perrin theory, Gouy Chapman Model and Stern theory. Electrokinetic phenomena – zeta potential  | 2         |           |
|            | 15                              | Electrode kinetics of electrode processes, Overpotential, the Butler-Volmer equation-The relationship between current density and overvoltage, the Tafel equation.   | 3         |           |
|            | 16                              | Polarization: electrolytic polarization, dissolution and deposition potentials, concentration polarization   | 2         |           |
|            | 17                              | Determination of hydrogen overvoltage and oxygen overvoltage. Metal deposition over voltage, Principles of Polarography- the half-wave potential   | 2         |           |

| Course Summary | This course provides a comprehensive overview of research methodology in chemistry, covering the processes involved in conducting research, data analysis techniques, the role of computers in chemistry research, analytical techniques, scientific writing, and research ethics. Students will develop essential skills and knowledge to conduct research effectively and ethically in the field of chemistry. |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used                       |
|-----|--|------------------|---------------------|---|
| CO1 | Understand the sequential processes involved in research, from topic formation to publication, encompassing hypothesis development, data collection, analysis, hypothesis revision, and effective communication of findings. | U                | F                   | Instructor created exams / Quiz /Assignment |
| CO2 | Develop proficiency in analyzing chemical data, including error classification, measurement accuracy, precision assessment, and statistical analysis application.  | An               | C                   | Class test /Assignment /Quiz                |
| CO3 | Acquire competency in utilizing computers for chemistry research, covering hardware, software, programming languages, operating  | U                | P                   | Assignment/ Class test                      |

|  |   |    |   |                                   |
|--|---|----|---|-----------------------------------|
|  | systems, and specific applications like MS Office and scientific software.  |    |   |                                   |
| CO4  | Apply various analytical techniques, such as chromatography, spectroscopy, electroanalysis, and thermal analysis, effectively in chemical research.   | Ap | C | Assignments /Seminar presentation |
| CO5  | Gain proficiency in scientific writing, including report structuring, language usage, and citation styles, while adhering to ethical standards like plagiarism avoidance and responsible data handling. | U  | M | Assignments /Seminar presentation |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) |   |    |   |                                   |

### Detailed Syllabus:

| Module     | Unit  | Content  | Hrs       | Marks     |
|------------|---|--|-----------|-----------|
| <b>I</b>   | <b>Introduction to Research Methodology</b>   |  | <b>12</b> | <b>24</b> |
|            | 1   | Formation of the Topic   | 1         |           |
|            | 2   | Hypothesis: Conceptual Definitions, Operational Definition   | 2         |           |
|            | 3   | Gathering of Data, Analysis of Data, Revising of Hypothesis, Conclusion  | 3         |           |
|            | 4   | Literature Survey: Journals, Books, and E-resources  | 3         |           |
|            | 5   | Presentation and Publication of Research Output  | 3         |           |
| <b>II</b>  | <b>Data Analysis and Interpretation</b>       |  | <b>12</b> | <b>24</b> |
|            | 6   | Errors in Chemical Analysis: Classification of Errors, Accuracy, Precision, and Reproducibility of Measurement | 3         |           |
|            | 7   | Methods of Analysis in Chemistry: Instrumental and Non-Instrumental  | 2         |           |
|            | 8   | Presentation of Data: Mean, Standard Deviation   | 2         |           |
|            | 9   | Comparison of Results: "t" Test, "f" Test, Chi-Square Test   | 2         |           |
|            | 10  | Least Squares Analysis, Weighted Least Squares Analysis, Regression Coefficient, Rejection of Results          | 3         |           |
| <b>III</b> | <b>Applications of Computers in Chemistry</b> |  | <b>12</b> | <b>24</b> |

|           |  |   |           |           |
|-----------|--|---|-----------|-----------|
|           | 11   | Types of Computers: Mainframe, Mini, Micro, Supercomputers, Personal Computers  | 2         |           |
|           | 12   | Computer Hardware: CPU, Input and Output Devices, Memory, Peripheral Devices, Auxiliary Storage Devices   | 2         |           |
|           | 13   | Computer Software: System Software, Application Software, Programming Languages: Machine Language, Assembly Language, High-Level Languages, Interpreter and Compiler  | 3         |           |
|           | 14   | Operating Systems: Disk Operating System, Windows, macOS, Linux   | 2         |           |
|           | 15   | Use of Internet in Research: Websites, Search Engines, e Journals, e-Libraries, INFLIBNET   | 1         |           |
|           | 16   | Software Packages and Scientific Applications in Chemistry: Origin, Chems sketch, Chemdraw  | 2         |           |
| <b>IV</b> | <b>Analytical Techniques for Chemical Research</b> |   | <b>12</b> | <b>26</b> |
|           | 17   | Chromatography: Thin layer chromatography, Column chromatography, Paper chromatography  | 2         |           |
|           | 18   | Gas liquid chromatography, High pressure liquid chromatography (HPLC)   | 3         |           |
|           | 19   | Spectroscopic methods: UV-Visible, IR,  | 1         |           |
|           | 20   | NMR, Mass and ESR   | 2         |           |
|           | 21   | Electroanalytic methods: Polarography, Coulometry, Cyclic voltammetry   | 2         |           |
|           | 22   | Thermal analysis: thermogravimetry (TG)- differential thermal analysis (DTA) and differential scanning calorimetry (DSC)  | 2         |           |
| <b>V</b>  | <b>Scientific Writing and Ethics of Research</b>   |   | <b>12</b> |           |
|           | Open Ended   | Significance of Report Writing, steps in Writing Report: Introduction, review of literature, scope, Materials and methods, Results and discussion, conclusions, Bibliography, Citation, Acknowledgements, Layout, Structure, and Language of typical reports, use of Illustrations, and tables, Overview of popular citation styles: APA, MLA, ASA, Chicago Manual of Style, Oral presentation: Planning, Preparation, Practice, Making presentation, Use of visual aids, Importance of effective communication. Environmental Impacts, Ethical Issues, Commercialization, Copyright, Intellectual Property Rights, Reproduction of Published Material, Plagiarism, Citation and Acknowledgement, Reproducibility, Accountability |           |           |

### Detailed Syllabus:

| Module    | Unit  | Content   | Hrs       | Marks     |
|-----------|---|---|-----------|-----------|
| <b>I</b>  | <b>Introduction to Green Chemistry</b>                                |   | <b>12</b> | <b>20</b> |
|           | 1   | Green Chemistry - Some important environmental laws (The water (prevention and control of pollution) act, 1974, The environmental protection act of 1986, The air (prevention and control of pollution) act 1981) pollution prevention Act of 1990. | 2         |           |
|           | 2   | Emergence of green chemistry  | 1         |           |
|           | 3   | Need for Green Chemistry (Prevention and minimization of hazardous products, Reduction of chemical waste and byproducts).   | 2         |           |
|           | 4   | Goals of Green Chemistry. Anastas' twelve principles of green chemistry   | 2         |           |
|           | 5   | Detailed explanation of each postulate with suitable examples   | 5         |           |
| <b>II</b> | <b>Alternative starting materials and reagents in green chemistry</b> |   | <b>12</b> | <b>20</b> |
|           | 6   | Use of renewable starting materials: Illustrate with examples such as biodiesel, bioethanol   | 3         |           |
|           | 7   | Polymers from renewable resources.  | 2         |           |
|           | 8   | Green synthesis using Dimethyl carbonate  | 2         |           |
|           | 9   | Green oxidants [Hydrogen peroxide (H <sub>2</sub> O <sub>2</sub> ), Oxygen(O <sub>2</sub> )]  | 3         |           |
|           | 10  | Photochemical synthesis of vitamin D, Advantages compared to conventional synthesis   | 2         |           |

|            |                                     |  |           |           |
|------------|-------------------------------------|--|-----------|-----------|
| <b>III</b> | <b>Green solvents and catalysts</b> |  | <b>12</b> | <b>20</b> |
|            | 11                                  | Ionic liquid -Definition and design.   | 2         |           |
|            | 12                                  | Use of ethyl ammonium nitrate, Ethyl-3-methylimidazolium (EMIM) Chloride and EMIM dicyanamide  | 2         |           |
|            | 13                                  | Green synthesis using water as solvent   | 1         |           |
|            | 14                                  | Green synthesis using supercritical carbon dioxide as solvents   | 1         |           |
|            | 15                                  | Solid state synthesis  | 2         |           |
|            | 16                                  | Comparison of green solvents and conventional organic solvents. Green catalysis  | 2         |           |
|            | 17                                  | Biocatalysis and photocatalysis.   | 2         |           |
| <b>IV</b>  | <b>Green Energy and techniques</b>  |  | <b>12</b> | <b>20</b> |
|            | 18                                  | Mechanism of microwave assisted reaction   | 2         |           |
|            | 19                                  | Microwave assisted solvent free synthesis of copper phthalocyanine   | 1         |           |
|            | 20                                  | Microwave assisted reactions in water (Hofmann Elimination, methyl benzoate to benzoic acid and Decarboxylation reaction).   | 4         |           |
|            | 21                                  | Mechanism of ultrasound assisted reactions, sonochemical Simmons-Smith Reaction (Ultrasonic alternative to Iodine)   | 3         |           |
|            | 22                                  | Comparison of green and conventional method for one important molecule (oxidation of toluene to benzoic acid by microwave assisted method)                         | 2         |           |
| <b>V</b>   | <b>Open Ended</b>                   |  | <b>12</b> | <b>20</b> |
|            | I                                   | Click chemistry, waste management, renewable energy, can suggest experiments, awareness about presidential green chemistry awards, Limitations of green chemistry. | 12        |           |

### Detailed Syllabus:

| Module    | Unit   | Content   | Hrs       | Marks     |
|-----------|--|---|-----------|-----------|
| <b>I</b>  | <b>Introduction to Nanoscience</b>                             |   | <b>12</b> | <b>20</b> |
|           | 1  | History and Scope - Feynman's Vision, Moore's Law, Faraday's experiment and Lycopodium cup.   | 2         |           |
|           | 2  | Definitions of Nanoscience and Nanotechnology. Energetics of nanomaterials – kinetic stability, need for surface modification.                                | 2         |           |
|           | 3  | Classification of Nanomaterials – 3D, 2D, 1D and 0D, confinement of electrons and phonons, quantum dots.  | 3         |           |
|           | 4  | Surface to volume ratio, Quantum size effect, Surface Effect.   | 2         |           |
|           | 5  | Size-dependent variation in physical- chemical- electronics-catalytic properties.   | 3         |           |
| <b>II</b> | <b>Methods for nanoparticle synthesis and characterization</b> |   | <b>12</b> | <b>20</b> |
|           | 6  | Top-down approach - Ball milling, nanolithography.  | 1         |           |
|           | 7  | Bottom-up approach - Growth of nanocrystals in solution – Nucleation and Ostwald ripening. Capping agents – Dispersibility, -OH and -SH based capping agents. | 2         |           |
|           | 8  | Methods of synthesis - precipitation, sol-gel, hydrothermal, microemulsion, chemical reduction, chemical vapour deposition and self-assembly.                 | 3         |           |

|            |   |  |           |           |
|------------|---|--|-----------|-----------|
|            | 9   | Characterization of nanomaterials by XRD - Theory, factors affecting line broadening, Scherrer equation.   | 2         |           |
|            | 10  | SEM & TEM- Electron wavelength by De-Broglie relation, resolution and resolving power, electron-sample interaction, components, schematic diagram, bright and dark field imaging   | 2         |           |
|            | 11  | AFM- Introduction to scanning probe methods - components, schematic diagram, tapping and scanning modes of AFM)  | 2         |           |
| <b>III</b> | <b>Structure and Properties of Nanomaterials</b>  |  | <b>12</b> | <b>20</b> |
|            | 12  | Carbon Nanomaterials and the nature of carbon bonds.   | 1         |           |
|            | 13  | Fullerenes - structure of C60, laser ablation synthesis, doping and superconductivity in M3C60.  | 2         |           |
|            | 14  | CNT- chiral, zig-zag and armchair CNT, arc discharge synthesis, electrical and mechanical properties   | 2         |           |
|            | 15  | Graphene- Dependence of edge geometry on electrical, magnetic and optical properties. Oxidative exfoliation synthesis, properties and uses.  | 2         |           |
|            | 16  | Organic nanomaterials – Structure and applications of dendrimers and liposomes. Inorganic nanomaterials  | 2         |           |

### Detailed Syllabus:

| Module     | Unit   | Content  | Hrs       | Marks     |
|------------|--|--|-----------|-----------|
| <b>I</b>   | <b>LIGANDS IN BIOLOGICAL SYSTEMS</b>                                     |  | <b>12</b> | <b>20</b> |
|            | 1  | Classification of ligands  | 1         |           |
|            | 2  | Biologically significant ligands- H <sub>2</sub> O, NH <sub>3</sub> , Amino acids, peptides, proteins and DNA- RNA bases   | 4         |           |
|            | 3  | Chelate effect and Macrocyclic effect  | 2         |           |
|            | 4  | Significance of Chelate and Macrocyclic and macrobicyclic effects in biological systems.   | 5         |           |
| <b>II</b>  | <b>LIGAND INTERACTIONS IN BIOLOGICAL SYSTEMS</b>                         |  | <b>12</b> | <b>20</b> |
|            | 5  | Classification of metal ions into bulk, trace and ultra-trace elements   | 1         |           |
|            | 6  | Concept of hard and soft acids and bases   | 2         |           |
|            | 7  | Selectivity of ligands to different metals   | 2         |           |
|            | 8  | Essentials of Crystal-Field splitting  | 2         |           |
|            | 9  | Stability of complexes- thermodynamic and kinetic stability. Stability constant. Factors affecting stability of metal complexes, metal centered and ligand centered properties | 4         |           |
|            | 10   | Inert and Labile complexes   | 1         |           |
| <b>III</b> | <b>ROLE OF BULK METALS IN BIOLOGICAL SYSTEMS:<br/>(Na, K, Ca and Mg)</b> |  | <b>12</b> | <b>20</b> |
|            | 11   | Ionophores and its classification. Selectivity of ionophores.  | 1         |           |
|            | 12   | Active and passive transport   | 1         |           |
|            | 13   | Sodium potassium pump-mechanism- enzymes responsible for Na-K pump   | 2         |           |
|            | 14   | Potassium deficiency and K excess effects in biological systems.   | 1         |           |

|           |  |  |           |           |
|-----------|--|--|-----------|-----------|
|           | 15   | Structural role of Calcium in Muscle contraction, bone management and teeth management (qualitative).  | 3         |           |
|           | 16   | Role of Ca in blood clotting, Storage and transfer of Calcium (Brief idea)   | 2         |           |
|           | 17   | Role of Magnesium- structural and functional role in biological systems.   | 2         |           |
| <b>IV</b> | <b>ROLE OF TRACE AND ULTRATRACE METALS IN BIOLOGICAL SYSTEMS (Fe, Cu and Zn)</b> |  | <b>12</b> | <b>20</b> |
|           | 18   | Oxygen management Fe proteins (Haemoglobin and myoglobin), Metal management Fe proteins (ferritin and transferrin), electron management Fe proteins (cytochromes and Fe-S proteins)  | 3         |           |
|           | 19   | Oxygen management Cu proteins (Hemocyanin), Metal management Cu proteins (ceruloplasmin), electron management Cu proteins (cytochromes and plastocyanin)   | 3         |           |
|           | 20   | Biological role of Zn- Lewis acids role, structural role, and functional role- Zinc enzymes (carbonic anhydrase)   | 3         |           |
|           | 21   | Biological role of cobalt- Vitamin B12 co-enzymes  | 1         |           |
|           | 22   | Bioinorganic aspects of Photosynthesis and nitrogen fixation (Brief discussion). Nitrogenase enzyme (qualitative)  | 2         |           |
| <b>V</b>  | <b>APPLICATION OF COORDINATION COMPOUNDS IN MEDICINE AND THERAPY- OPEN ENDED</b> |  | <b>12</b> | <b>20</b> |
|           | 23   | Arthritis drugs (Gold based), Diabetic drugs (Vanadium based). Chelation therapy – Use of Dimercapto propanol. Chemotherapy- Cis platin and new generation Pt drugs- Drug resistance and DNA repair mechanism of Pt drugs. | 12        |           |

| Pre-requisites | 1. A brief understanding on composition of various foodstuffs<br>2. Chemical changes in food during processing and storage  |                  |                   |                    |             |
| Course Summary | The Course provides an understanding on structure, classification and properties of food nutrients. Comprehend the chemistry of food spoilage, methods of food preservation. Identify the role of natural and artificial food additives and adulterants, their types, and methods of detection. Apply techniques to analyze food samples for adulteration and pesticide residues using gas chromatography, liquid chromatography and mass spectrometry. |                  |                   |                    |             |

### Detailed Syllabus:

| Module    | Unit  | Content  | Hrs       | Marks     |
|-----------|---|--|-----------|-----------|
| <b>I</b>  | <b>Introduction to Food Chemistry- food nutrients</b> |  | <b>12</b> | <b>20</b> |
|           | 1   | Carbohydrates: Classification of carbohydrates. Structure and properties of Glucose and Fructose (monosaccharides), Maltose, lactose and sucrose (oligosaccharide) and starch and cellulose (polysaccharide) | 3         |           |
|           | 2   | Proteins: Introduction to food protein. Structure, classification and physicochemical properties of protein. denaturation, protein determination   | 3         |           |
|           | 3   | Lipids: Classification – Fats and oils – Hydrogenation – Analysis of fats and oils – Acid value, Saponification value and Iodine value.  | 3         |           |
|           | 4   | Minerals: Food minerals, minerals containing Calcium, Iron, Iodine, Sodium and Potassium. Deficiency and toxicity disorders.   | 2         |           |
|           | 5   | Vitamins: Classification, Sources and deficiency diseases.   | 1         |           |
| <b>II</b> | <b>Food Preservation</b>                              |  | <b>12</b> | <b>20</b> |
|           | 6   | Microorganism in food-chemistry of food spoilage: Definition, types of spoilage - physical, enzymatic, chemical and biological spoilage. Mechanism of spoilage.  | 3         |           |

|            |                                       |  |           |           |
|------------|---------------------------------------|--|-----------|-----------|
|            | 7                                     | Methods of food preservation -traditional (drying, smoking, sugaring, freezing, salting, fermentation)   | 1         |           |
|            | 8                                     | modern methods of food preservation (HPP, PEF, pasteurisation, vacuum packaging, MAP, ohmic heating)   | 2         |           |
|            | 9                                     | Physical and chemical Additives: – definition, types, Class I and Class II preservatives   | 2         |           |
|            | 10                                    | Food Packaging and storage - Biodegradable and edible packaging. Environmental concerns, recycling and disposal of packaging waste, Desirable materials for packaging  | 2         |           |
|            | 11                                    | Shelf life of foods – Definition, intrinsic and extrinsic factors controlling shelf life.  | 1         |           |
|            | 12                                    | Storage conditions, nutrition value.   | 1         |           |
| <b>III</b> | <b>Food Additives and Adulterants</b> |  | <b>12</b> | <b>20</b> |
|            | 13                                    | Natural and artificial additives for colour and taste- synthetic and natural sweeteners, acidulants, buffering salts, anticaking agents.   | 4         |           |
|            | 14                                    | Food adulteration - definition and reasons for food adulteration   | 3         |           |
|            | 15                                    | Methods of adulteration  | 2         |           |
|            | 16                                    | Common Food Adulterants in Chilli Powder, Tea dust, turmeric powder, milk, vegetable oil, coffee powder  | 3         |           |
| <b>IV</b>  | <b>Chemical analysis of food</b>      |  | <b>12</b> | <b>20</b> |
|            | 17                                    | Detection of adulteration in various foods-Jam, Tea, Coffee Wheat Flour, Butter, Milk powder, Jelly, Cocoa powder  | 4         |           |
|            | 18                                    | Analysis of pesticides and insecticides in food  | 1         |           |
|            | 19                                    | Qualitative Analysis: Gas Chromatography (GC) Liquid Chromatography (LC)   | 2         |           |
|            | 20                                    | Introduction to HPLC-Separation mechanisms. UV and MS detection  | 2         |           |
|            | 21                                    | Chromatogram interpretation  | 2         |           |
|            | 22                                    | Mass Spectrometry (MS)   | 1         |           |
| <b>V</b>   | <b>Open Ended- Modern Food Habits</b> |  | <b>12</b> | <b>20</b> |
|            | 23                                    | Definition and health effects of fast foods, instant foods, dehydrated foods, junk foods and condiments - Composition and health effects of chocolates and soft drinks. Harmful effects of modern food habits, Healthy cooking methods | 12        |           |

| Pre-requisites | 1. Basic understanding of organic chemical reactions and molecular structure.  |                  |                   |                    |             |
| Course Summary | The course covers polymers comprehensively, including classification, polymerization methods, properties, processing, and commercial applications. Students classify polymers by origin, synthesis, and structure, analyzing chain and step growth polymerizations. They apply polymer property knowledge to control performance and explore processing techniques like bulk and suspension polymerizations, calendaring, and injection molding. Additionally, students evaluate commercial polymers for industrial use, gaining a thorough understanding of their importance in various industries. |                  |                   |                    |             |

### Detailed Syllabus:

| Module    | Unit  | Content   | Hrs       | Marks     |
|-----------|---|---|-----------|-----------|
| <b>I</b>  | <b>Introduction to Polymers Types of Polymerisation</b> |   | <b>12</b> | <b>20</b> |
|           | 1   | Polymers and macromolecules – Monomers – Homo and hetero polymers – Copolymers.   | 1         |           |
|           | 2   | Classification based on origin (natural, semi synthetic and synthetic) and synthesis (addition and condensation).   | 2         |           |
|           | 3   | Classification based on structure (linear, branched chain and cross linked) and intermolecular forces (elastomeres, fibres, thermoplastics and thermosetting polymers)          | 2         |           |
|           | 4   | Tacticity in polymers- polymer chain flexibility- factors affecting chain flexibility   | 2         |           |
|           | 5   | Glass transition temperature and crystalline melting points- variation and structures- molecular interpretation of glassy state of polymers                                     | 2         |           |
|           | 6   | Chain and step growth polymerizations – Free radical, ionic and coordination polymerizations with mechanism – Zeigler-Natta polymerization                                      | 3         |           |
| <b>II</b> | <b>Properties of Polymers</b>                           |   | <b>12</b> | <b>20</b> |
|           | 7   | Molecular weights of polymers: Average molecular weights – Number average and Weight average molecular weights  | 2         |           |
|           | 8   | Sedimentation average (Method of determination not required) and Viscosity average molecular weight – determination of viscosity average molecular weight                       | 3         |           |
|           | 9   | Polydispersity index and molecular weight distribution; Molecular weight and Degree of polymerization.  | 3         |           |
|           | 10  | Introduction to polymer melt rheology Newtonian fluids- non-Newtonian fluids. Bingham plastics, pseudo plastics- rheopectic and thixotropic behaviour- rheological measurements | 4         |           |

|            |   |   |           |           |
|------------|---|---|-----------|-----------|
| <b>III</b> | <b>Polymerisation Techniques and Polymer Processing</b> |   | <b>12</b> | <b>20</b> |
|            | 11  | Polymerisation Techniques: Bulk, solution, suspension, emulsion, melt condensation and interfacial polycondensation polymerizations.  | 2         |           |
|            | 12  | Calendering, rotational moulding, compression, injection moulding, blow moulding and thermoforming.   | 1         |           |
|            | 13  | Additives for compounding rubbers- mastication, two roll milling, internal mixing, compounding ingredients, pigments.   | 2         |           |
|            | 14  | Processing aids- processing methods for manufacture of products: blending, calendaring, extrusion and moulding.   | 3         |           |
|            | 15  | Different elastomer curing systems: efficient, semi efficient, conventional and sulphurless cure mechanism of vulcanization, sulphur vulcanizing systems, non-sulphur vulcanizing systems for olefin rubbers  | 3         |           |
|            | 16  | Polymer composites, Properties and its different types- Process of tailoring properties   | 1         |           |
| <b>IV</b>  | <b>Polymer Testing and Commercial Polymers (12 hrs)</b> |   | <b>12</b> | <b>20</b> |
|            | 17  | Importance of standards and standard organizations- processability and performance- testing of plastics and rubbers material characterization tests such as hardness, tensile stress/strain, compression stress/strain, shear stress/strain, flexural stress/strain, tear tests, rebound resilience, friction, creep, fatigue.      | 2         |           |
|            | 18  | Pollution due to plastics – Recycling of plastics - Plastic identification codes.   | 2         |           |

| Pre-requisites | 1. Prior understanding of basic chemistry principles and chemical reactions.<br>2. Introductory knowledge of industrial processes and terminology.  |                  |                   |                    |             |
| Course Summary | The course provides a comprehensive overview of chemical industries, covering industrial processes, waste management, petrochemicals, pharmaceuticals, fertilizers, and Kerala's chemical industries. Students learn about water treatment, safety measures, and the production of synthetic petrol, pharmaceuticals, and fertilizers. By examining various industries, students gain valuable insights into their operations, preparing them for roles in the chemical sector. |                  |                   |                    |             |

### Detailed Syllabus:

| Module    | Unit                                   | Content   | Hrs       | Marks     |
|-----------|--|---|-----------|-----------|
| <b>I</b>  | <b>Introduction (12 hrs)</b>           |   | <b>12</b> | <b>20</b> |
|           | 1                                      | Requirements of an industry – location – water – industrial water treatment.  | 2         |           |
|           | 2                                      | Water softening methods: Clark’s process - lime soda process - Ion exchange process)  | 2         |           |
|           | 3                                      | Safety measures – pilot plants – ISO certification.   | 2         |           |
|           | 4                                      | Solid waste management -incineration method, Composting process, disposal.  | 2         |           |
|           | 5                                      | Liquid waste management- Dewatering, sedimentation, Root-Zone Treatment.  | 2         |           |
|           | 6                                      | Gaseous waste management-absorption, adsorption, combustion.  | 2         |           |
| <b>II</b> | <b>Petrochemical Industry (12 hrs)</b> |   | <b>12</b> | <b>20</b> |
|           | 7                                      | Introduction. Natural gas – CNG, LNG and LPG. Coal: Classification based on carbon content – carbonisation of coal – composition and uses of various fractions. | 2         |           |
|           | 8                                      | Crude Oil: Constitution and distillation – composition and uses of different distillates – ignition point, flash point and octane number – cracking.            | 2         |           |
|           | 9                                      | Catalysts used in Petroleum Industries: Structure, selectivity and applications. Synthetic Petrol: Manufacture by Bergius and Fischer-Tropsch processes.        | 3         |           |

|            |  |   |           |           |
|------------|--|---|-----------|-----------|
|            | 10   | Manufacture of petrochemicals: Ethylene glycol, glycerine, acetone, phenol, vinyl acetate, toluene, linear alkyl benzenes and their sulphonates.  | 3         |           |
|            | 11   | Usage and depletion of petroleum products – need for alternative fuel – hydrogen as the future fuel.  | 2         |           |
| <b>III</b> | <b>Pharmaceutical Industry (12 hrs)</b>        |   | <b>12</b> | <b>20</b> |
|            | 12   | Drugs: Definition – History of drugs – Terminology: Prodrug, pharmacy, pharmacology, pharmacodynamics and pharmacokinetics (elementary idea only).                                      | 2         |           |
|            | 13   | Antipyretics, analgesics and antacids (definition and examples, structures not expected)  | 2         |           |
|            | 14   | Antihistamines, antibiotics, antiseptics and disinfectants, (definition and examples, structures not expected)  | 2         |           |
|            | 15   | Anti-inflammatory agents, Sedatives, Tranquilizers, Hypnotics and Antidepressant drugs (definition and examples, structures not expected) – Preparation of paracetamol and aspirin.     | 3         |           |
|            | 16   | Drug toxicity – Thalidomide tragedy (a brief study) – Effective use of drugs – Over dosage – Prescription and non-prescription drugs – Definition, examples, uses and side effects      | 2         |           |
|            | 17   | Drug abuse- Medical applications of metal and metal oxide nanomaterials.  | 1         |           |
| <b>IV</b>  | <b>Fertilizer Industry (12 hrs)</b>            |   | <b>12</b> | <b>20</b> |
|            | 18   | Introduction- Nitrogenous, phosphatic and potash fertilizers, NPK fertilizers, NPK value, Manufacturing methods of ammonium nitrate- Prilling method, Stengel method.                   | 3         |           |
|            | 19   | Urea–Manufacture from ammonia and carbon dioxide.   | 1         |           |
|            | 20   | Monoammonium Phosphate (MAP) and Diammonium Phosphate (DAP)- Manufacture from ammonia and phosphoric acid.  | 2         |           |
|            | 21   | Potassium Chloride (muriate of potash)- main steps involved in the manufacture. Mining of the K mineral, Separation of the main ingredient and purifying.                               | 3         |           |
|            | 22   | Potassium Sulphate (sulfate of potash) - Manufacture from langbeinite (K <sub>2</sub> SO <sub>4</sub> . MgSO <sub>4</sub> ) and KCl. NPK (17-17-17)- Granulation method of manufacture. | 3         |           |

Prior knowledge of semiconductor physics, particularly related to energy bands and semiconductor devices, is necessary.   |                  |                   |                    |             |
| Course Summary | This course covers essential components and technologies for sustainable energy production. Starting with global energy needs and renewable sources, it explores electrode processes and solar cell materials. Students learn about photovoltaic principles, fuel cell types, and energy storage methods like batteries and supercapacitors. The course also discusses emerging technologies for renewable energy conversion, such as solar thermal and water splitting. Through this, students gain a solid understanding of materials vital for sustainable energy solutions and future energy technologies. |                  |                   |                    |             |

| Course Summary | The catalysis course covers catalyst preparation, deactivation, and applications across various fields. It includes fundamental principles, preparation methods, deactivation mechanisms, and regeneration techniques. Additionally, it explores phase transfer catalysis, biocatalysis, and industrial catalysis, focusing on their principles, mechanisms, and applications such as oil-based chemistry, hydrocarbon synthesis, and environmental protection. Ultimately, students gain a comprehensive understanding of catalytic processes and their applications in chemistry, environmental science, and materials science. |                  |                   |                    |             |

### Detailed Syllabus:

| Module   | Unit   | Content  | Hrs       | Marks     |
|----------|--|--|-----------|-----------|
| <b>I</b> | <b>Catalyst Preparative Methods and Deactivation</b> |  | <b>12</b> | <b>20</b> |
|          | 1  | Support materials -Preparation and structure of supports, Surface properties.  | 2         |           |
|          | 2  | Preparation of catalysts- Introduction of precursor compound, Pre-activation treatment, Activation process.  | 2         |           |
|          | 3  | General methods of synthesis of zeolites. Mechanism of nuclear formation and crystal growth. Structures of some selected zeolites. Zeolites A, X and Y. Shape selective catalysis. | 3         |           |
|          | 4  | Deactivation of catalysts- Classification of catalyst deactivation processes, Poisoning of catalysts, Coke formation on catalysts, Sintering of catalysts.                         | 3         |           |

|            |                                 |   |           |           |
|------------|---------------------------------|---|-----------|-----------|
|            | 5                               | Regeneration of deactivated catalysts. Feasibility of regeneration. Description of coke deposit and kinetics of regeneration                  | 2         |           |
| <b>II</b>  | <b>Phase Transfer Catalysis</b> |   | <b>12</b> | <b>20</b> |
|            | 6                               | Basic concepts in phase transfer catalysis. Phase transfer catalyzed reactions and their basic steps.   | 2         |           |
|            | 7                               | Effect of reaction variables on transfer and intrinsic rates. Outline of compounds used as phase transfer catalysts. Use of quaternary salts. | 3         |           |
|            | 8                               | Macrocyclic and macrobicyclic ligands. PEG's and related compounds.   | 3         |           |
|            | 9                               | Use of dual phase transfer catalyst or co-catalyst in phase transfer systems.   | 2         |           |
|            | 10                              | Separation and recovery of phase transfer catalysts. Insoluble phase transfer catalysts.  | 2         |           |
| <b>III</b> | <b>Biocatalysis</b>             |   | <b>12</b> | <b>20</b> |
|            | 11                              | Enzymes. An introduction to enzymes. Enzymes as proteins.   | 2         |           |
|            | 12                              | Classification and nomenclature of enzymes. Structure of enzymes. Working of enzymes. Effect on reaction rate. Thermodynamic definitions.     | 2         |           |
|            | 13                              | Catalytic power and specificity of enzymes. Optimization of weak interactions between enzyme and substrate in the transition state.           | 3         |           |
|            | 14                              | Binding energy, reaction specificity and catalysis. Specific catalytic groups contributing to catalysis. Immobilized biocatalysts.            | 3         |           |
|            | 15                              | Definition and classification of immobilized biocatalysts. Immobilization of coenzymes.   | 2         |           |
| <b>IV</b>  | <b>Industrial Catalysis</b>     |   | <b>12</b> | <b>20</b> |
|            | 16                              | Oil based chemistry- Catalytic reforming, Catalytic cracking, Paraffin cracking, Steam cracking.  | 1         |           |
|            | 17                              | Hydrocarbons from synthesis gas. Fisher-Tropsch process. Mobil process for conversion of methanol to gasoline hydrocarbons.                   | 2         |           |
|            | 18                              | Catalysis for environmental protection, removal of pollutants from exhausts, mobile and static sources.                                       | 2         |           |

|          |                          |  |           |           |
|----------|--------------------------|--|-----------|-----------|
|          | 19                       | Hydroformylation of olefins. Carbonylation of organic substrates.  | 2         |           |
|          | 20                       | Conversion of methanol to acetic acid. Synthesis of vinyl acetate and acetic anhydride. Palladium catalyzed oxidation of ethylene.   | 3         |           |
|          | 21                       | Acrylonitrile synthesis. Zeigler-Natta catalysts for olefin polymerization.  | 1         |           |
|          | 22                       | Propene polymerization with silica supported metallocene/MAO catalysts   | 1         |           |

| Pre-requisites | 1. Prior knowledge of chemical bonding and structure of molecules<br>2. Understanding the reaction mechanism of different reactions and rearrangements. |                  |                   |                    |             |
| Course Summary | This course covers reactions, synthesis planning, supramolecular chemistry, and drug design   |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used          |
|-----|---|------------------|---------------------|--------------------------------|
| CO1 | To understand and apply named reactions and reagents in organic synthesis               | U                | P                   | Quizzes /Seminar               |
| CO2 | To formulate synthetic strategies employing synthons, protecting groups, and reagents   | An               | C                   | Discussion/<br>Assignment      |
| CO3 | To conceptualize non-covalent interactions and applications in supramolecular chemistry | An               | C                   | Seminar / Discussion           |
| CO4 | To Comprehend the principles of drug design and understand the                          | Ap               | F                   | Discussion/Seminar /Assignment |

|   |   |    |    |                    |
|---|---|----|----|--------------------|
|   | stages of drug development  |    |    |                    |
| CO5   | To Rationalize the mechanisms of redox reactions and substitution reactions involved in organic synthesis | Ap | An | Seminar/discussion |
| <p>* - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)</p> <p># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)</p> |   |    |    |                    |

### Detailed Syllabus:

| Module    | Unit                                    | Content   | Hrs       | Marks     |
|-----------|---|---|-----------|-----------|
| <b>I</b>  | <b>Named Reactions and Reagents</b>     |   | <b>9</b>  | <b>18</b> |
|           | 1                                       | Reformatsky reaction, Baeyer-Villiger oxidation, Beckman rearrangement,           | 3         |           |
|           | 2                                       | Benzilic acid rearrangement, Benzoin Condensation, Claisen rearrangement,         | 2         |           |
|           | 3                                       | Clemmenson reduction, Dies-alder reaction, Knoevenagel condensation,              | 2         |           |
|           | 4                                       | Pictet-Spengler reaction, Strecker amino acid synthesis, Simmons-Smith reaction,  | 2         |           |
| <b>II</b> | <b>Synthesis and Synthetic Planning</b> |   | <b>13</b> | <b>26</b> |
|           | 5                                       | Target molecules, Synthons, synthetic equivalents (anionic and cationic)          | 1         |           |
|           | 6                                       | Disconnection   | 1         |           |
|           | 7                                       | Protecting groups-alcohols (Bn, PMB, Ac, TBS) explain the concept with a reaction | 2         |           |
|           | 8                                       | Protecting groups-aldehydes (cyclic acetal) explain the concept with a reaction   | 2         |           |
|           | 9                                       | Protecting groups-amines (Bz, Boc, Fmoc) explain the concept with a reaction      | 2         |           |
|           | 10                                      | Protecting groups-acids (Me and t-Bu ester) explain the concept                   | 2         |           |

|            |   |   |           |           |
|------------|---|---|-----------|-----------|
|            |   | with a reaction   |           |           |
|            | 11  | Convergent and linear synthesis (demonstrate with an example)   | 1         |           |
|            | 12  | Functional inter-group conversions (Any one example), retrosynthesis of chalcones.  | 2         |           |
| <b>III</b> | <b>Supramolecular Chemistry</b>   |   | <b>13</b> | <b>26</b> |
|            | 13  | Various types of non-covalent interactions (H bonding, van der Waals interactions, cation-pi interaction, pi-pi stacking) bonding and applications of addition compounds, | 4         |           |
|            | 14  | Crown ethers  | 2         |           |
|            | 15  | Cyclodextrins   | 2         |           |
|            | 16  | Cryptands, catenanes and rotaxanes.   | 2         |           |
|            | 17  | Importance of supramolecular chemistry in living systems.   | 3         |           |
| <b>IV</b>  | <b>Principles of Drug Design</b>  |   | <b>13</b> | <b>28</b> |
|            | 18  | Introduction to medicinal chemistry   | 2         |           |
|            | 19  | Therapeutic index, solubility, Intermolecular binding forces in drug target interactions- (electrostatic, H bonding, van der Waals, dipole-dipole).                       | 3         |           |
|            | 20  | Introduction to various drug targets; Proteins- Enzymes- Receptors- their roles, neurotransmitters, receptor activation and regulation.                                   | 3         |           |
|            | 21  | Introduction to Pharmacodynamics and pharmacokinetics (ADME); affinity and efficacy.  | 3         |           |
|            | 22  | Types of drugs, stages of drug development (basic concept only).  | 2         |           |
| <b>V</b>   | <b>Open ended</b>   |   | <b>12</b> |           |
|            | Modern Techniques in Organic Synthesis/Asymmetric Synthesis/Total synthesis |   |           |           |

### Detailed Syllabus:

| Module    | Unit   | Content   | Hrs      | Marks     |
|-----------|--|---|----------|-----------|
| <b>I</b>  | <b>Introduction to Computational Chemistry</b> |   | <b>9</b> | <b>15</b> |
|           | 1  | Theory, computation & modeling – Definition of terms.   | 2        |           |
|           | 2  | Need of approximate methods in quantum mechanics. Computable Quantities – structure, potential energy surfaces and chemical properties. | 3        |           |
|           | 3  | Cost & Efficiency – relative CPU time, software & hardware.   | 2        |           |
|           | 4  | Classification of computational methods.  | 2        |           |
| <b>II</b> | <b>Computer Simulation Methods- I</b>          |   | <b>9</b> | <b>15</b> |

|            |   |  |           |           |
|------------|---|--|-----------|-----------|
|            | 6   | Introduction – molecular dynamics and Monte Carlo methods.   | 2         |           |
|            | 7   | Calculation of simple thermodynamic properties - energy, heat capacity, pressure and temperature, phase space, practical aspects of computer simulation.   | 3         |           |
|            | 8   | Periodic boundary conditions, Monitoring the equilibration.  | 2         |           |
|            | 9   | Analyzing the results of a simulation, error estimation.   | 2         |           |
| <b>III</b> | <b>Computer Simulation Methods- II</b>  |  | <b>12</b> | <b>20</b> |
|            | 10  | Molecular dynamics (MD) method – molecular dynamics using simple models  | 2         |           |
|            | 11  | MD with continuous potentials, finite difference methods, choosing the time step, setting up and running a MD simulation.  | 3         |           |
|            | 12  | Monte Carlo (MC) method - calculating properties by integration, .   | 3         |           |
|            | 13  | Metropolis method, random number generators.   | 2         |           |
|            | 14  | MC simulation of rigid molecules.  | 2         |           |
| <b>IV</b>  | <b>ab initio Methods and basic concepts of Density Functional Theory in Computational Chemistry</b> |  | <b>18</b> | <b>30</b> |
|            | 15  | Review of Hartree – Fock method for atoms, SCF treatment of polyatomic molecules.  | 2         |           |
|            | 16  | Closed shell systems - restricted HF calculations; Open shell systems – ROHF and UHF calculations; The Roothan – Hall equations, Koopmans theorem  | 2         |           |
|            | 17  | HF limit & electron correlation, Introduction to electron correlation (post -HF) methods   | 3         |           |
|            | 18  | Basics of DFT- Applications of computational chemistry in various fields, such as drug discovery, materials science, catalysis, and environmental chemistry, and understand how computational methods contribute to advancing scientific research and solving real-world problems. | 3         |           |
|            | 19  | Hydrogen-like, Slater-type & Gaussian type basis functions, classification of basis sets – minimal, double zeta, triple zeta, split-valence, polarization & diffuse basis sets, even tempered & well-tempered basis sets, contracted basis sets,                                   | 3         |           |

|          |  |   |           |           |
|----------|--|---|-----------|-----------|
|          | 20   | Pople-style basis sets and their nomenclature, correlation consistent basis sets, basis set truncation error, effect of choice of method/ basis set (model chemistries) on cpu time.  | 3         |           |
| <b>V</b> | <b>Representation of Molecular Geometry and Gaussian Calculations (Open Ended)</b> |   | <b>12</b> | <b>20</b> |
|          | Open Ended   | Specification of molecular geometry using a) Cartesian coordinates and b) Internal coordinates. The Z-matrix, Z-matrices of some simple molecules like H <sub>2</sub> , H <sub>2</sub> O, formaldehyde ammonia and methanol. Simple calculations using Gaussian programme | 12        |           |

| Pre-requisites | 1. A fundamental understanding of general chemistry is essential.<br>2. Proficiency in organic chemistry is crucial, as petrochemicals and cosmetics are primarily composed of organic compounds.<br>3. Knowledge of analytical chemistry techniques used for the characterization and analysis of petrochemicals and cosmetic products, such as chromatography, spectroscopy, and mass spectrometry, may be beneficial. |                  |                   |                    |             |
| Course Summary | This course aim to provide students with a comprehensive understanding of petroleum products and their purification processes, as well as the skills necessary for careers in petroleum refining, petrochemicals, quality control, and environmental compliance. Study of the various ingredients used in cosmetics, including their sources, functions, properties, and effects on the skin and hair.                   |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used                       |
|-----|---|------------------|---------------------|---|
| CO1 | A comprehensive understanding of the petrochemical industry, including its role in the global economy, key players, and major processes involved.   | U                | F                   | Instructor-created exams / Quiz /Assignment |
| CO2 | Understanding of the composition of petroleum, including the various hydrocarbon compounds present and their physical and chemical properties. Understanding of synthetic methods for producing | Ap               | C                   | Class test /Assignment /Quiz                |

|   |  |    |   |   |
|---|--|----|---|---|
|   | organic compounds from hydrocarbons.   |    |   |   |
| CO3   | Realizing the physical and chemical properties of different hydrocarbon fractions in crude oil, including their boiling points, densities, viscosities, and reactivities. Familiarity with the principles of distillation. Understanding of the equipment and processes used in crude oil distillation.          | U  | P | Assignment/<br>Class test               |
| CO4   | Familiarise with the diverse range of products derived from petroleum refining and the purification techniques employed to remove impurities from petroleum products.  | An | C | Assignments<br>/Seminar<br>presentation |
| CO5   | Explore applications of petro chemistry in various fields, such as cosmetic and perfume industry and also the various ingredients used in perfumes and cosmetics, including natural and synthetic fragrances, essential oils, emollients, surfactants, preservatives, colorants, and other functional additives. | Ap | M | Assignments<br>/Seminar<br>presentation |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |  |    |   |   |

### Detailed Syllabus:

| Module    | Unit  | Content   | Hrs       | Marks     |
|-----------|---|---|-----------|-----------|
| <b>I</b>  | <b>Introduction to Petrochemistry</b>                               |   | <b>9</b>  | <b>15</b> |
|           | 1   | Introduction. Petroleum. Refining of crude oil.   | 2         |           |
|           | 2   | Fuels for internal combustion engines. Knocking, Octane number. Unleaded petrol. Diesel Engine and Cetane number.   | 3         |           |
|           | 3   | Cracking. Thermal, Catalytic. Mechanism of cracking process.  | 2         |           |
|           | 4   | Reforming Activation Gasoline. Petrochemicals.  | 2         |           |
| <b>II</b> | <b>Hydrocarbons from Petroleum and Industrial organic synthesis</b> |   | <b>12</b> | <b>20</b> |
|           | 6   | Introduction. Raw materials. Saturated hydrocarbons from natural gas. Uses of saturated hydrocarbons. Unsaturated hydrocarbons – Acetylene, Ethylene, Propylene.  | 2         |           |
|           | 7   | Aromatic hydrocarbons - Benzene. Toluene. Chemical processing of paraffin hydrocarbons. Chemical processing of ethylene hydrocarbons. Chemical processing of acetylene. Chemical processing of aromatic hydrocarbons. | 3         |           |

|            |   |   |           |           |
|------------|---|---|-----------|-----------|
|            | 8   | Introduction to industrial organic synthesis from Petroleum. The raw materials and basic processes. Chemical process used in industrial organic synthesis.  | 2         |           |
|            | 9   | Petrochemicals- Methanol. Important points. Ethanol. Important points. Rectified spirit from beer. Methylated spirit. Proof spirit. Preparation of the absolute alcohol from rectified spirit.  | 3         |           |
|            | 10  | Acetaldehyde. Acetic acid. Isopropanol. Ethylene glycol. Glycerine. Acetone. Phenol. Formaldehyde. Important points.  | 2         |           |
| <b>III</b> | <b>Composition of Petroleum Crude and Distillation of Crude Petroleum</b> |   | <b>15</b> | <b>25</b> |
|            | 11  | Composition of petroleum crude. Composition of the petroleum products. Isomeric compounds. Classification of petroleum crude  | 2         |           |
|            | 12  | Physical Properties and Test Methods. 1. Viscosity: Other methods for finding out viscosity. Viscosity of an oil blend. Use of the figure for finding out viscosity. Viscosities of hydrocarbons. 2. Density, 3. Surface and interfacial tensions. 4. Refractive Index. 5. Flash and fire points. 6. Cloud and pour points. 7. Aniline point. 8. Diesel index. 9. Cetane number. 10. Octane number and knock characteristics. | 5         |           |
|            | 13  | Preparation of petroleum for processing. Destruction of petroleum emulsion. Electric desalting plants. Methods of petroleum distillation. Distillation of crude petroleum. .  | 3         |           |
|            | 14  | Treatment of the residual liquid processing of liquid fuels such as petroleum and petroleum products. Storage tanks. Rectification columns. Cap tray or bubble tray columns.  | 3         |           |
|            | 15  | Heat exchange apparatus. Steam space heaters or boilers. Condensers. Pipe furnaces. Pipelines. Fitting Compressors and pumps.   | 2         |           |
| <b>IV</b>  | <b>Petroleum products and their purification</b>                          |   | <b>12</b> | <b>30</b> |
|            | 16  | Introduction. Classification of petroleum products. Liquefied hydrocarbons, gases and fuels. Fuel oils or boiler oils. Fuel for Jet engines and gas turbine engines.  | 2         |           |
|            | 16  | Lubricants, Paraffins, ceresins, petroleum. Miscellaneous petroleum products.   | 2         |           |
|            | 17  | Products of petrochemical and basic organic synthesis. Dye intermediates. Lacquers. Solvents. Thinners.   | 2         |           |
|            | 18  | Absorptive and adsorptive purification. Sulphuric acid purification.  | 3         |           |
|            | 19  | Hydrotreating. Purification in a DC electric field. New methods of purification. De mercaptanisation.   | 3         |           |
| <b>V</b>   | <b>Perfumes and Cosmetics (Open Ended)</b>                                |   | <b>12</b> | <b>20</b> |
|            | Open Ended  | Perfumes: Introduction. Esters. Alcohols. Ketones. Ionones. Nitromusks. Aldehydes. Diphenyl compounds. Production of natural perfumes. Flower perfume. Fruit flavours. Artificial flavours. Colognes and after shave preparation. Deodorants and Antiperspirants. Cosmetics: Introduction. Shampoos. Ingredients. Recipe. Hair dyeing. Materials used. Colour and   | 12        |           |

|  |  |  |  |  |
|--|--|--|--|--|
|  |  | Curl of Hair. Creams and Lotions. Skin Chemicals. Their ingredients. Preparation and recipe. Lipsticks. Ingredients. Preparation and recipe. |  |  |
|--|--|--|--|--|

### Detailed Syllabus:

| Module | Unit  | Content   | Hrs (48+12) | Mark |
|--------|---|---|-------------|------|
| I      | <b>CHARACTERIZATION OF COORDINATION COMPLEXES USING IR SPECTROSCOPIC TECHNIQUES</b> |   | <b>13</b>   | 26   |
|        | 1   | Infrared spectra of metal complexes. Group frequency concept.   | 1           |      |
|        | 2   | Changes in ligand vibrations on coordination-   | 2           |      |
|        | 3   | Effect of complex formation on symmetry, electronic structure and bonding characteristics of ligands –                                | 4           |      |
|        | 4   | Coordination of nitrate ion, sulphate ion, acetate ion, perchlorate ions, cyano group - metal ligand vibrations – water as a ligand – | 3           |      |
|        | 5   | IR spectroscopy of carbonyl complexes -   | 1           |      |

|            |  |  |           |    |
|------------|--|--|-----------|----|
|            | 6  | Application of IR spectroscopy in coordination complexes –   | 2         |    |
| <b>II</b>  | <b>CHARACTERIZATION OF COORDINATION COMPLEXES USING ESR AND MOSSBAUER SPECTROSCOPIC TECHNIQUES</b> |  | <b>10</b> | 22 |
|            | 1  | ESR spectra- Introduction  | 1         |    |
|            | 2  | Importance of g values in structure elucidation of complexes   | 1         |    |
|            | 3  | Application of ESR measurements to magnetically dilute and concentrated complexes -                    | 2         |    |
|            | 4  | Mossbauer spectra - application to iron complexes –  | 2         |    |
|            | 5  | Factors affecting the chemical shift in coordination complexes   | 2         |    |
|            | 6  | NMR spectra of diamagnetic copper complexes  | 2         |    |
| <b>III</b> | <b>APPLICATIONS OF METAL COMPLEXES IN MEDICINAL FIELD</b>  |  | <b>15</b> | 28 |
|            | 1  | Introduction – DNA-metal complex interaction –   | 2         |    |
|            | 2  | Effect of Ligand exchange reactions and redox reactions in biological activity of metal complexes -    | 2         |    |
|            | 3  | Effect of catalytic activity and photo physical activity on biological activity                        | 2         |    |
|            | 4  | Virtual screening of pharmacological behaviour - Drug likeness and bioavailability                     | 2         |    |
|            | 5  | Lipinski's Rule of 5 - Pharmacokinetic analysis of a drug molecule –ADMET                              | 2         |    |
|            | 6  | Analysis – In vitro and in vivo studies  | 2         |    |
|            | 7  | Molecular docking.   | 1         |    |
|            | 8  | Biological activities of transition metal complexes of Schiff bases, aromatic hydrazones               | 2         |    |
| <b>IV</b>  | <b>ANOMALOUS MAGNETIC MOMENTS OF METAL COMPLEXES</b>   |  | <b>10</b> | 22 |
|            | 1  | Introduction – Equilibrium between two spin states   | 1         |    |
|            | 2  | Magnetically non-equivalent sites in the metal ions – solute-solvent interactions                      | 1         |    |
|            | 3  | solute-solute interaction – configurational equilibrium – Antiferromagnetism – types –                 | 2         |    |
|            | 4  | antiferromagnetic exchange pathways –examples of antiferromagnetic binuclear complexes (Cu(II), V(IV)) | 2         |    |

|   |   |  |    |  |

| Course Summary | This course is intended to provide basic knowledge in inorganic chemistry and nanochemistry. The student gets an understanding of the Bohr model of the atom and the modern quantum mechanical model of the atom through the first module of this course. Different types of chemical bonding are also included in the first module. General properties of the atom and the variation of these properties in the periodic table are also discussed in this course. Basic principles of analytical chemistry are included in the third module of this course which includes acid-base titration, redox titration, complexometric titration, and mixture analysis. This course also tries to explore the basic principles and importance of nanochemistry. To master the laboratory skills acid-base titration, and redox titration experiments are incorporated into this course structure. |                  |                   |                    |             |

### Detailed Syllabus:

| Module | Unit   | Content   | Hrs       | Mark      |
|--------|--|---|-----------|-----------|
| I      | <b>Atomic structure and Chemical Bonding</b> |   | <b>15</b> | <b>34</b> |
|        | 1  | Bohr atom model, merits and its limitations, Heisenberg uncertainty principle, Louis de Broglie's matter waves – dual nature.   | 2         |           |
|        | 2  | Schrödinger wave equation (Mention the equation and the terms in it), - Concept of orbitals, comparison of orbit and orbital.   | 2         |           |
|        | 3  | Quantum numbers and their significance  | 1         |           |
|        | 4  | Pauli's Exclusion principle - Hund's rule of maximum multiplicity - Aufbau principle - Electronic configuration of atoms.   | 2         |           |
|        | 5  | Chemical Bonding: Introduction – Type of bonds. Ionic bond, Covalent bond, Coordinate bond, and hydrogen bond (Intermolecular and intramolecular hydrogen bond with examples).  | 2         |           |
|        | 6  | VSEPR theory: Shapes of BeCl <sub>2</sub> , BF <sub>3</sub> , CH <sub>4</sub> , NH <sub>3</sub> , H <sub>2</sub> O, PCl <sub>5</sub> , SF <sub>4</sub> , ClF <sub>3</sub> , XeF <sub>2</sub> , SF <sub>6</sub> , IF <sub>5</sub> , XeF <sub>4</sub> , IF <sub>7</sub> and XeF <sub>6</sub> . NH <sub>4</sub> <sup>+</sup> , SO <sub>4</sub> <sup>2-</sup> | 2         |           |
|        | 7  | Valence Bond theory - Hybridisation involving s, p and d orbitals: SP (acetylene), SP <sup>2</sup> (ethylene), SP <sup>3</sup> (CH <sub>4</sub> ), SP <sup>3</sup> d (PCl <sub>5</sub> ), SP <sup>3</sup> d <sup>2</sup> (SF <sub>6</sub> )   | 2         |           |

|            |    |   |           |           |
|------------|----|---|-----------|-----------|
|            | 8  | Molecular Orbital theory: LCAO – Electronic configuration of H <sub>2</sub> , B <sub>2</sub> , C <sub>2</sub> , N <sub>2</sub> , O <sub>2</sub> and CO – Calculation of bond order and its applications.(Bond length and bond strength), Comparison of VB and MO theories | 2         |           |
| <b>II</b>  |    | <b>Periodic Properties</b>  | <b>5</b>  | <b>10</b> |
|            | 9  | Name and symbol of elements, Law of triads, octaves, X-ray studies of Henry Mosley, Moseley's periodic law - Modern periodic law – Long form periodic table.  | 2         |           |
|            | 10 | Periodicity in properties: Atomic and ionic radii, Ionization enthalpy - Electron affinity (electron gain enthalpy) – Electronegativity, valency, Oxidation number (Representative element), metallic and non-metallic character, inert pair effect,                      | 3         |           |
| <b>III</b> |    | <b>Analytical Chemistry</b>   | <b>15</b> | <b>34</b> |
|            | 11 | Atomic mass - Molecular mass - Mole concept – Molar volume - Oxidation and reduction – Equivalent mass.   | 2         |           |
|            | 12 | Methods of expressing concentration: Molality, molarity, normality, ppm, and mole fraction.   | 2         |           |
|            | 13 | Dilution formula, Theory of volumetric analysis – Acid-base, redox, and complexometric titrations :   | 3         |           |
|            | 14 | acid-base, redox, and complexometric indicators. Double burette method of titration: Principle and advantages.  | 2         |           |
|            | 15 | Principles in the separation of cations in qualitative analysis   | 2         |           |
|            | 16 | Common ion effect and solubility product and its applications in qualitative analysis   | 2         |           |
|            | 17 | Microanalysis and its advantages. Accuracy & Precision (mention only).  | 2         |           |
| <b>IV</b>  |    | <b>Nano Chemistry</b>   | <b>10</b> | <b>20</b> |
|            | 18 | Introduction, Definition of nanomaterials and nanotechnology –Classification of nanomaterials based on dimension with examples for each 0D, 1D, and 2D  | 2         |           |
|            | 19 | Synthesis of nanomaterials: top-down processes and Bottom-up processes  | 2         |           |
|            | 20 | Carbon nanotubes, Types of Carbon nanotubes – SWCNT and MWCNT, Synthesis of Carbon nanotubes - electric arc discharge, laser ablation, and chemical vapor deposition.   | 3         |           |

|   |     |  |           |  |
|---|-----|--|-----------|--|
|   | 21  | Important properties of carbon nanotubes and applications of carbon nanotubes.   | 1         |  |
|   | 22  | Fullerenes, graphene - (basic concept only, no classification is required) Applications of nanomaterials.  | 2         |  |
|   |     | <b>Basic Inorganic Chemistry Practical:<br/>Acid-Base titrations and Redox titrations</b>  | <b>30</b> |  |
|   |     | <b>General Instructions</b><br>For weighing electronic balance must be used. For titrations, double burette titration method should be used. Standard solution must be prepared by the student. Use a safety coat, gloves, shoes and goggles in the laboratory. A minimum of 7 experiments must be done. Out of the seven experiments, one is to be open-ended which can be selected by the teacher  |           |  |
|   |     | Importance of lab safety – Burns, Eye accidents, Cuts, gas poisoning, Electric shocks, Treatment of fires, Precautions and preventive measures.<br>Weighing using electronic balance, Preparation of standard solutions.   |           |  |
|   | I   | <b>Neutralization Titrations</b><br>1. Strong acid – strong base.<br>2. Strong acid – weak base.<br>3. Weak acid – strong base.  |           |  |
|   | II  | <b>Redox Titrations - Permanganometry:</b><br>4. Estimation of oxalic acid.<br>5. Estimation of Fe <sup>2+</sup> /FeSO <sub>4</sub> .7H <sub>2</sub> O/Mohr's salt<br><br><b>Redox Titrations - Dichrometry</b><br>6. Estimation of Fe <sup>2+</sup> /FeSO <sub>4</sub> .7H <sub>2</sub> O/Mohr's salt using internal indicator.<br>7. Estimation of Fe <sup>2+</sup> /FeSO <sub>4</sub> .7H <sub>2</sub> O/Mohr's salt using external indicator.<br><b>Redox Titrations - Iodimetry and Iodometry:</b><br>8. Estimation of iodine.<br>9. Estimation of copper |           |  |
| V | III | <b>Open-ended experiments - Suggestions</b><br>Iodometry: Estimation of chromium.<br>Determination of acetic acid content in vinegar by titration with NaOH.<br>Determination of alkali content in antacid tablets by titration with HCl.<br>Determination of available chlorine in bleaching powder.  |           |  |

| Course Summary | This course is intended to provide basic knowledge in inorganic chemistry and nanochemistry. The student gets an understanding of the Bohr model of the atom and the modern quantum mechanical model of the atom through the first module of this course. Different types of chemical bonding are also included in the first module. General properties of the atom and the variation of these properties in the periodic table are also discussed in this course. Basic principles of analytical chemistry are included in the third module of this course which includes acid-base titration, redox titration, complexometric titration, and mixture analysis. This course also tries to explain the roles of metal ions in biological systems and understand the biochemistry of certain key elements. To master the laboratory skills acid-base titration, and redox titration experiments are incorporated into this course structure. |                  |                   |                    |             |

### Detailed Syllabus:

| Module   | Unit   | Content   | Hrs       | Marks     |
|----------|--|---|-----------|-----------|
| <b>I</b> | <b>Atomic structure and Chemical Bonding</b> |   | <b>15</b> | <b>34</b> |
|          | 1  | Bohr atom model, merits and its limitations, Heisenberg uncertainty principle, Louis de Broglie's matter waves – dual nature.   | 2         |           |
|          | 2  | Schrödinger wave equation (Mention the equation and the terms in it), - Concept of orbitals, comparison of orbit and orbital.   | 2         |           |
|          | 3  | Quantum numbers and their significance  | 1         |           |
|          | 4  | Pauli's Exclusion principle - Hund's rule of maximum multiplicity - Aufbau principle - Electronic configuration of atoms.   | 2         |           |
|          | 5  | Chemical Bonding: Introduction – Type of bonds. Ionic bond, Covalent bond, Coordinate bond, and hydrogen bond (Intermolecular and intramolecular hydrogen bond with examples).  | 2         |           |
|          | 6  | VSEPR theory: Shapes of BeCl <sub>2</sub> , BF <sub>3</sub> , CH <sub>4</sub> , NH <sub>3</sub> , H <sub>2</sub> O, PCl <sub>5</sub> , SF <sub>4</sub> , ClF <sub>3</sub> , XeF <sub>2</sub> , SF <sub>6</sub> , IF <sub>5</sub> , XeF <sub>4</sub> , IF <sub>7</sub> and XeF <sub>6</sub> . NH <sub>4</sub> <sup>+</sup> , SO <sub>4</sub> <sup>2-</sup> | 2         |           |
|          | 7  | Valence Bond theory - Hybridisation involving s, p and d orbitals: SP (acetylene), SP <sup>2</sup> (ethylene), SP <sup>3</sup> (CH <sub>4</sub> ), SP <sup>3</sup> d (PCl <sub>5</sub> ), SP <sup>3</sup> d <sup>2</sup> (SF <sub>6</sub> )   | 2         |           |
|          | 8  | Molecular Orbital theory: LCAO – Electronic configuration of H <sub>2</sub> , B <sub>2</sub> , C <sub>2</sub> , N <sub>2</sub> , O <sub>2</sub> and CO – Calculation  | 2         |           |

|            |    |  |           |           |
|------------|----|--|-----------|-----------|
|            |    | of bond order and its applications.(Bond length and bond strength), Comparison of VB and MO theories   |           |           |
| <b>II</b>  |    | <b>Periodic Properties</b>   | <b>5</b>  | <b>10</b> |
|            | 9  | Name and symbol of elements, Law of triads, octaves, X-ray studies of Henry Mosley, Moseley's periodic law - Modern periodic law – Long form periodic table.   | <b>2</b>  |           |
|            | 10 | Periodicity in properties: Atomic and ionic radii, Ionization enthalpy - Electron affinity (electron gain enthalpy) – Electronegativity, valency, Oxidation number (Representative element), metallic and non-metallic character, inert pair effect, | <b>3</b>  |           |
| <b>III</b> |    | <b>Analytical Chemistry</b>  | <b>15</b> | <b>34</b> |
|            | 11 | Atomic mass - Molecular mass - Mole concept – Molar volume - Oxidation and reduction – Equivalent mass.  | <b>2</b>  |           |
|            | 12 | Methods of expressing concentration: Molality, molarity, normality, ppm, and mole fraction.  | <b>2</b>  |           |
|            | 13 | Dilution formula, Theory of volumetric analysis – Acid-base, redox, and complexometric titrations :  | <b>3</b>  |           |
|            | 14 | acid-base, redox, and complexometric indicators. Double burette method of titration: Principle and advantages.   | <b>2</b>  |           |
|            | 15 | Principles in the separation of cations in qualitative analysis  | <b>2</b>  |           |
|            | 16 | Common ion effect and solubility product and its applications in qualitative analysis –  | <b>2</b>  |           |
|            | 17 | Microanalysis and its advantages. Accuracy & Precision (mention only).   | <b>2</b>  |           |
| <b>IV</b>  |    | <b>Bio-inorganic Chemistry</b>   | <b>10</b> | <b>20</b> |
|            | 18 | Metal ions in biological systems - Biochemistry of iron, Haemoglobin and myoglobin,  | <b>2</b>  |           |
|            | 19 | O <sub>2</sub> and CO <sub>2</sub> transportation (mechanism not required) - Chlorophyll and photosynthesis (mechanism not expected)   | <b>2</b>  |           |
|            | 20 | Elementary idea of structure and mechanism of action of sodium potassium pump  | <b>2</b>  |           |
|            | 21 | Biochemistry of zinc and cobalt. Toxicity of metal ions (Pb, Hg and As).   | <b>2</b>  |           |
|            | 22 | Anticancer drugs: <i>Cis</i> -platin, oxaliplatin,– Structure and significance.  | <b>2</b>  |           |
|            |    | <b>Basic Inorganic Chemistry Practical:<br/>Acid-Base titrations and Redox titrations</b>  | <b>30</b> |           |

|   |     |   |  |  |
|---|-----|---|--|--|
| V |     | <b>General Instructions</b><br>For weighing electronic balance must be used. For titrations, double burette titration method should be used. Standard solution must be prepared by the student. Use a safety coat, gloves, shoes and goggles in the laboratory. A minimum of 7 experiments must be done. Out of the seven experiments, one is to be open-ended which can be selected by the teacher   |  |  |
|   |     | Importance of lab safety – Burns, Eye accidents, Cuts, gas poisoning, Electric shocks, Treatment of fires, Precautions and preventive measures.<br>Weighing using electronic balance, Preparation of standard solutions.  |  |  |
|   | I   | <b>Neutralization Titrations</b><br>1. Strong acid – strong base.<br>2. Strong acid – weak base.<br>3. Weak acid – strong base.   |  |  |
|   | II  | <b>Redox Titrations - Permanganometry:</b><br>4. Estimation of oxalic acid.<br>5. Estimation of $\text{Fe}^{2+}/\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$ /Mohr's salt<br><br><b>Redox Titrations - Dichrometry</b><br>6. Estimation of $\text{Fe}^{2+}/\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$ /Mohr's salt using internal indicator.<br>7. Estimation of $\text{Fe}^{2+}/\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$ /Mohr's salt using external indicator.<br><br><b>Redox Titrations - Iodimetry and Iodometry:</b><br>8. Estimation of iodine.<br>9. Estimation of copper |  |  |
|   | III | <b>Open-ended experiments - Suggestions</b><br>Iodometry: Estimation of chromium.<br>Determination of acetic acid content in vinegar by titration with NaOH.<br>Determination of alkali content in antacid tablets by titration with HCl.<br>Determination of available chlorine in bleaching powder.   |  |  |

| Course Summary | This course is intended to provide basic knowledge in inorganic chemistry and nanochemistry. The student gets an understanding of the Bohr model of the atom and the modern quantum mechanical model of the atom through the first module of this course. Different types of chemical bonding are also included in the first module. General properties of the atom and the variation of these properties in the periodic table are also discussed in this course. Basic principles of analytical chemistry are included in the third module of this course which includes acid-base titration, redox titration, complexometric titration, and mixture analysis. This course also tries to explore processes in metallurgy including extraction of metals and alloy formation. To master the laboratory skills acid-base titration, and redox titration experiments are incorporated into this course structure. |                  |                   |                    |             |

**Course Outcomes (CO):**

### Detailed Syllabus:

| Module   | Unit   | Content   | Hrs       | Marks     |
|----------|--|---|-----------|-----------|
| <b>I</b> | <b>Atomic structure and Chemical Bonding</b> |   | <b>15</b> | <b>34</b> |
|          | 1  | Bohr atom model, merits and its limitations, Heisenberg uncertainty principle, Louis de Broglie's matter waves – dual nature.   | 2         |           |
|          | 2  | Schrödinger wave equation (Mention the equation and the terms in it), - Concept of orbitals, comparison of orbit and orbital.   | 2         |           |
|          | 3  | Quantum numbers and their significance  | 1         |           |
|          | 4  | Pauli's Exclusion principle - Hund's rule of maximum multiplicity - Aufbau principle - Electronic configuration of atoms.   | 2         |           |
|          | 5  | Chemical Bonding: Introduction – Type of bonds. Ionic bond, Covalent bond, Coordinate bond, and hydrogen bond (Intermolecular and intramolecular hydrogen bond with examples).  | 2         |           |
|          | 6  | VSEPR theory: Shapes of BeCl <sub>2</sub> , BF <sub>3</sub> , CH <sub>4</sub> , NH <sub>3</sub> , H <sub>2</sub> O, PCl <sub>5</sub> , SF <sub>4</sub> , ClF <sub>3</sub> , XeF <sub>2</sub> , SF <sub>6</sub> , IF <sub>5</sub> , XeF <sub>4</sub> , IF <sub>7</sub> and XeF <sub>6</sub> . NH <sub>4</sub> <sup>+</sup> , SO <sub>4</sub> <sup>2-</sup> | 2         |           |
|          | 7  | Valence Bond theory - Hybridisation involving s, p and d orbitals: SP (acetylene), SP <sup>2</sup> (ethylene), SP <sup>3</sup> (CH <sub>4</sub> ), SP <sup>3</sup> d (PCl <sub>5</sub> ), SP <sup>3</sup> d <sup>2</sup> (SF <sub>6</sub> )   | 2         |           |
|          | 8  | Molecular Orbital theory: LCAO – Electronic configuration of H <sub>2</sub> , B <sub>2</sub> , C <sub>2</sub> , N <sub>2</sub> , O <sub>2</sub> and CO – Calculation of   | 2         |           |

|            |    |  |           |           |
|------------|----|--|-----------|-----------|
|            |    | bond order and its applications.(Bond length and bond strength), Comparison of VB and MO theories  |           |           |
| <b>II</b>  |    | <b>Periodic Properties</b>   | <b>5</b>  | <b>10</b> |
|            | 9  | Name and symbol of elements, Law of triads, octaves, X-ray studies of Henry Mosley, Mosleys periodic law - Modern periodic law – Long form periodic table.   | <b>2</b>  |           |
|            | 10 | Periodicity in properties: Atomic and ionic radii, Ionization enthalpy - Electron affinity (electron gain enthalpy) – Electronegativity, valency, Oxidation number (Representative element), metallic and non-metallic character, inert pair effect, | <b>3</b>  |           |
| <b>III</b> |    | <b>Analytical Chemistry</b>  | <b>15</b> | <b>34</b> |
|            | 11 | Atomic mass - Molecular mass - Mole concept – Molar volume - Oxidation and reduction – Equivalent mass.  | <b>2</b>  |           |
|            | 12 | Methods of expressing concentration: Molality, molarity, normality, ppm, and mole fraction.  | <b>2</b>  |           |
|            | 13 | Dilution formula, Theory of volumetric analysis – Acid-base, redox, and complexometric titrations :  | <b>3</b>  |           |
|            | 14 | acid-base, redox, and complexometric indicators. Double burette method of titration: Principle and advantages.   | <b>2</b>  |           |
|            | 15 | Principles in the separation of cations in qualitative analysis  | <b>2</b>  |           |
|            | 16 | Common ion effect and solubility product and its applications in qualitative analysis –  | <b>2</b>  |           |
|            | 17 | Microanalysis and its advantages. Accuracy & Precision (mention only).   | <b>2</b>  |           |
| <b>IV</b>  |    | <b>Metallurgy</b>  | <b>10</b> | <b>20</b> |
|            | 18 | Ores and minerals, Concentration of ores – Calcination and roasting – Reduction to free metal.   | <b>2</b>  |           |
|            | 19 | Electrometallurgy – Hydrometallurgy. Refining of metals: Electrolytic refining, zone refining  | <b>2</b>  |           |
|            | 20 | Extractive metallurgy of Al, Fe  | <b>2</b>  |           |
|            | 21 | Alloys: Definition – Composition and uses of German silver, brass, bronze, gunmetal and alnico. Steel: Open hearth process (brief description only)  | <b>2</b>  |           |
|            | 22 | Classification of steel – Composition and uses of stainless steels, and applications of industrially important stainless steel types- (AISI Grade mention only)  | <b>2</b>  |           |
|            |    | <b>Basic Inorganic Chemistry Practical:<br/>Acid-Base titrations and Redox titrations</b>  | <b>30</b> |           |

| Pre-requisites | Concept of atom and molecule<br>Constituents of the atom, Rutherford's model of the atom.<br>Periodic table and classification of elements to different blocks,<br>Basic knowledge of qualitative and quantitative analysis<br>Titration and use of indicators  |                  |                   |                    |             |
| Course Summary | This course is intended to provide basic knowledge in inorganic chemistry and nanochemistry. The student gets an understanding of the Bohr model of the atom and the modern quantum mechanical model of the atom through the first module of this course. Different types of chemical bonding are also included in the first module. General properties of the atom and the variation of these properties in the periodic table are also discussed in this course. Basic principles of analytical chemistry are included in the third module of this course which includes acid-base titration, redox titration, complexometric titration, and mixture analysis. This course also tries to examine nuclear chemistry, the N/P ratio, and the application of radioactive isotopes. To master the laboratory skills acid-base titration, and redox titration experiments are incorporated into this course structure. |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used           |
|-----|--|------------------|---------------------|---------------------------------|
| CO1 | <b>To Understand the structure of atoms and rules regarding the arrangement of electrons in an atom.</b>             | U                | C                   | Instructor-created exams / Quiz |
| CO2 | <b>To discuss the chemical bonding, theories of chemical bonding and predict molecular shapes using VSEPR theory</b> | U                | F                   | Class test /Assignment / Quiz   |

|   |  |    |   |                                     |
|---|--|----|---|-------------------------------------|
| CO3   | <b>To Comprehend periodic properties, understand laws and the concept of the modern periodic table, and its implications</b> | U  | F | Class test<br>/Assignment /<br>Quiz |
| CO4   | <b>To Master the principle of volumetric analysis, understand the separation of cations in qualitative analysis</b>          | U  | C | Class test<br>/Assignment /<br>Quiz |
| CO5   | <b>To Examine nuclear chemistry, the N/P ratio and the application of radioactive isotopes</b>                               | U  | F | Class test<br>/Assignment /<br>Quiz |
| CO6   | <b>To Perform different titrations and execute open-ended experiments safely and effectively</b>                             | Ap | P | Lab work                            |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |  |    |   |                                     |

### Detailed Syllabus:

| Module   | Unit   | Content   | Hrs       | Mark      |
|----------|--|---|-----------|-----------|
| <b>I</b> | <b>Atomic structure and Chemical Bonding</b> |   | <b>15</b> | <b>34</b> |
|          | 1  | Bohr atom model, merits and its limitations, Heisenberg uncertainty principle, Louis de Broglie's matter waves – dual nature.   | 2         |           |
|          | 2  | Schrödinger wave equation (Mention the equation and the terms in it), - Concept of orbitals, comparison of orbit and orbital.   | 2         |           |
|          | 3  | Quantum numbers and their significance  | 1         |           |
|          | 4  | Pauli's Exclusion principle - Hund's rule of maximum multiplicity - Aufbau principle - Electronic configuration of atoms.   | 2         |           |
|          | 5  | Chemical Bonding: Introduction – Type of bonds. Ionic bond, Covalent bond, Coordinate bond, and hydrogen bond (Intermolecular and intramolecular hydrogen bond with examples).  | 2         |           |
|          | 6  | VSEPR theory: Shapes of BeCl <sub>2</sub> , BF <sub>3</sub> , CH <sub>4</sub> , NH <sub>3</sub> , H <sub>2</sub> O, PCl <sub>5</sub> , SF <sub>4</sub> , ClF <sub>3</sub> , XeF <sub>2</sub> , SF <sub>6</sub> , IF <sub>5</sub> , XeF <sub>4</sub> , IF <sub>7</sub> and XeF <sub>6</sub> . NH <sub>4</sub> <sup>+</sup> , SO <sub>4</sub> <sup>2-</sup> | 2         |           |
|          | 7  | Valence Bond theory - Hybridisation involving s, p and d orbitals: SP (acetylene), SP <sup>2</sup> (ethylene), SP <sup>3</sup> (CH <sub>4</sub> ), SP <sup>3</sup> d (PCl <sub>5</sub> ), SP <sup>3</sup> d <sup>2</sup> (SF <sub>6</sub> )   | 2         |           |
|          | 8  | Molecular Orbital theory: LCAO – Electronic configuration of H <sub>2</sub> , B <sub>2</sub> , C <sub>2</sub> , N <sub>2</sub> , O <sub>2</sub> and CO – Calculation  | 2         |           |

|            |    |  |           |           |
|------------|----|--|-----------|-----------|
|            |    | of bond order and its applications.(Bond length and bond strength), Comparison of VB and MO theories   |           |           |
| <b>II</b>  |    | <b>Periodic Properties</b>   | <b>5</b>  | <b>10</b> |
|            | 9  | Name and symbol of elements, Law of triads, octaves, X-ray studies of Henry Mosley, Mosley's periodic law - Modern periodic law – Long form periodic table.  | <b>2</b>  |           |
|            | 10 | Periodicity in properties: Atomic and ionic radii, Ionization enthalpy - Electron affinity (electron gain enthalpy) – Electronegativity, valency, Oxidation number (Representative element), metallic and non-metallic character, inert pair effect, | <b>3</b>  |           |
| <b>III</b> |    | <b>Analytical Chemistry</b>  | <b>15</b> | <b>34</b> |
|            | 11 | Atomic mass - Molecular mass - Mole concept – Molar volume - Oxidation and reduction – Equivalent mass.  | <b>2</b>  |           |
|            | 12 | Methods of expressing concentration: Molality, molarity, normality, ppm, and mole fraction.  | <b>2</b>  |           |
|            | 13 | Dilution formula, Theory of volumetric analysis – Acid-base, redox, and complexometric titrations :  | <b>3</b>  |           |
|            | 14 | acid-base, redox, and complexometric indicators. Double burette method of titration: Principle and advantages.   | <b>2</b>  |           |
|            | 15 | Principles in the separation of cations in qualitative analysis  | <b>2</b>  |           |
|            | 16 | Common ion effect and solubility product and its applications in qualitative analysis –  | <b>2</b>  |           |
|            | 17 | Microanalysis and its advantages. Accuracy & Precision (mention only).   | <b>2</b>  |           |
| <b>IV</b>  |    | <b>Nuclear Chemistry</b>   | <b>10</b> | <b>20</b> |
|            | 18 | Nuclear stability – N/P ratio – Packing fraction – Mass defect – Binding energy  | <b>2</b>  |           |
|            | 19 | Nuclear fission - Atom bomb – Nuclear fusion – Hydrogen bomb.  | <b>1</b>  |           |
|            | 20 | Nuclear forces - Exchange theory and liquid drop model - Nuclear reactors. Decay series – group displacement law   | <b>2</b>  |           |
|            | 21 | Isotopes, Separation of isotopes by gaseous diffusion method and thermal diffusion method  | <b>2</b>  |           |
|            | 22 | Application of radioactive isotopes – $^{14}\text{C}$ dating – Rock dating – Isotopes as tracers – Study of reaction mechanism (ester hydrolysis) – Radio diagnosis and radiotherapy   | <b>3</b>  |           |
|            |    | <b>Basic Inorganic Chemistry Practical:<br/>Acid-Base titrations and Redox titrations</b>  | <b>30</b> |           |
|            |    | <b>General Instructions</b>  |           |           |

|   |     |   |  |  |
|---|-----|---|--|--|
| V |     | For weighing electronic balance must be used. For titrations, double burette titration method should be used. Standard solution must be prepared by the student. Use safety coat, gloves, shoes and goggles in the laboratory. A minimum of 7 experiments must be done. Out of the seven experiments, one is to be open-ended which can be selected by the teacher  |  |  |
|   |     | Importance of lab safety – Burns, Eye accidents, Cuts, gas poisoning, Electric shocks, Treatment of fires, Precautions and preventive measures.<br>Weighing using electronic balance, Preparation of standard solutions.  |  |  |
|   | I   | <b>Neutralization Titrations</b><br>1. Strong acid – strong base.<br>2. Strong acid – weak base.<br>3. Weak acid – strong base.   |  |  |

| Pre-requisites | Classification of elements to different blocks, comparative study of s, p, d and f block elements based on electronic configuration.<br>General idea about transition and inner transition elements,<br>Concept of coordinate bond, valency.<br>Concept of covalent bond, and organic compound.<br>Theoretical and practical knowledge about volumetric analysis   |                  |                   |                    |             |
| Course Summary | This course explains the characteristics of s, p, d and f block elements and familiarises some of the important compounds of main group elements.<br>It also gives insight into coordination compounds and various theories to explain the bonding in coordination compounds.<br>It covers the practical application of complex formation in quantitative analysis<br>A brief discussion of Organometallic compounds, complexometric titration, preparation of complex compounds and colourimetry is also included in this course. |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used           |
|-----|--|------------------|---------------------|---------------------------------|
| CO1 | To Elucidate the trends in physical and chemical properties of s and p block elements                        | U                | F                   | Instructor-created exams / Quiz |
| CO2 | To Evaluate the general properties of transition metals and to distinguish between lanthanides and actinides | U                | F                   | Class test /Assignment / Quiz   |
| CO3 | To Unlock the Complexity of Coordination Compounds: Structures, Properties, and Applications                 | U                | F                   | Class test /Assignment / Quiz   |

|   |  |    |   |                               |
|---|--|----|---|-------------------------------|
| CO4   | To demonstrate different theories to explain the formation of coordination compounds                 | U  | C | Class test /Assignment / Quiz |
| CO5   | To explore the characteristics of organometallic compounds   | U  | F | Class test /Assignment / Quiz |
| CO6   | To Perform complexometric titrations, colourimetry experiments and preparation of complex compounds. | Ap | P | Lab Work                      |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |  |    |   |                               |

### Detailed Syllabus:

| Module | Unit                            | Content  | Hrs       | Mark      |
|--------|---------------------------------|--|-----------|-----------|
| I      | <b>s &amp; p BLOCK ELEMENTS</b> |  | <b>15</b> | <b>33</b> |
|        | 1                               | s block elements - General properties: Ionization Energy, Flame coloration, photoelectric effect, metallic character, hydration energy.  | 2         |           |
|        | 2                               | p-block elements: comparative study- halides, sulphates, carbonates and bicarbonates (solubility and thermal stability).   | 2         |           |
|        | 3                               | Oxidation number and inert pair effect, Comparison of Lewis acidity of boron halides.  | 1         |           |
|        | 4                               | Preparation, properties, structure and uses of Diborane, Boric acid, Borazine and Boron nitride. Structure and bonding of oxides of N (N <sub>2</sub> O, NO, NO <sub>2</sub> , N <sub>2</sub> O <sub>4</sub> ) and S (SO <sub>2</sub> and SO <sub>3</sub> )  | 3         |           |
|        | 5                               | Oxo acids of P (H <sub>3</sub> PO <sub>2</sub> , H <sub>3</sub> PO <sub>3</sub> , H <sub>3</sub> PO <sub>4</sub> ) and Cl (HOCl, HOCl <sub>2</sub> , HOCl <sub>3</sub> , HOCl <sub>4</sub> ) (structure and acid strength).  | 2         |           |
|        | 6                               | Colour and bond dissociation energy of halogens. Interhalogen compounds: Preparation, properties uses and structure (One example each- ClF, ClF <sub>3</sub> , ClF <sub>5</sub> and IF <sub>7</sub> ), Electropositive character of iodine   | 2         |           |
|        | 7                               | Pseudo halogen: Comparison of pseudo halogen (Cyanogen as example) and halogens. structure of poly halide ions (ICl <sub>2</sub> <sup>-</sup> , ICl <sub>4</sub> <sup>-</sup> and I <sub>5</sub> <sup>-</sup> ). Noble gases: Isolation of noble gases: Dewar's method- Separation by charcoal adsorption method, Uses of He, and Ne | 3         |           |

|            |    |   |           |           |
|------------|----|---|-----------|-----------|
| <b>II</b>  |    | <b>TRANSITION AND INNER TRANSITION ELEMENTS</b>   | <b>8</b>  | <b>17</b> |
|            | 8  | Transition Metals: General characteristics: Metallic character, oxidation states, size, density, melting point, boiling point. ionization energy, colour, magnetic properties, catalytic properties                   | 2         |           |
|            | 9  | non-stoichiometric compounds, complex formation and alloy formation. Difference between first row and other two rows.   | 2         |           |
|            | 10 | Lanthanides: Electronic configuration and general characteristics. Occurrence of lanthanides – Importance of beach sands of Kerala – Isolation of lanthanides from monazite sand – Separation by ion exchange method. | 2         |           |
|            | 11 | Lanthanide contraction: Causes and consequences. Industrial importance of lanthanides. Actinides: Electronic configuration and general characteristics – Comparison with lanthanides [Mention only].                  | 2         |           |
| <b>III</b> |    | <b>COORDINATION COMPOUNDS</b>   | <b>15</b> | <b>34</b> |
|            | 12 | Double salt and complex, ligand, type of ligands: (mono, bi, tri, tetra, hexa, ambidentate, chelate and macrocyclic ligands) coordination number,   | 2         |           |
|            | 13 | Isomerism - structural and stereoisomerism, IUPAC Nomenclature of complexes,  | 2         |           |
|            | 14 | Postulates of Werner's theory, EAN rule, application of co-ordination complexes in quantitative and qualitative analysis.   | 2         |           |
|            | 15 | Theories of bonding, VBT (valence bond theory) , geometry of co-ordination numbers 4 and 6,   | 2         |           |
|            | 16 | Limitations of VBT, Crystal field Theory: CFSE of low spin and high spin octahedral complexes, Factors affecting crystal field splitting.   | 2         |           |
|            | 17 | Spectrochemical series, Crystal field splitting of d orbitals in Tetragonal and Square planar Complexes.  | 2         |           |
|            | 18 | Magnetism (spin only magnetic moment) and colour (d-d transition),  | 1         |           |
|            | 19 | Distorted octahedral complexes, merits and demerits of CFT.   | 2         |           |
| <b>IV</b>  |    | <b>Organometallic Compounds</b>   | <b>7</b>  | <b>14</b> |
|            | 20 | Definition – Classification based on the nature of metal-carbon bond, Zeise's salt. 18-electron rule.   | 2         |           |

|          |     |   |           |  |
|----------|-----|---|-----------|--|
|          | 21  | Metal carbonyls - Mononuclear and Polynuclear carbonyls of Fe, Co and Ni (structure only) – Bonding in metal carbonyls.   | <b>2</b>  |  |
|          | 22  | Ferrocene: Preparation, properties and bonding (VBT only). Catalysis: Zeigler Natta catalyst in the polymerization and Wilkinson catalyst in the hydrogenation of alkene.   | <b>3</b>  |  |
| <b>V</b> |     | <b>PRACTICAL :<br/>Complexometric titrations and Inorganic Preparations</b>   | <b>30</b> |  |
|          | I   | A minimum of 7 experiments must be done. Out of the seven experiments, one is to be open-ended which can be selected by the teacher<br>1. Estimation of zinc.<br>2. Estimation of magnesium.<br>3. Estimation of calcium.<br>4. Determination of total hardness of water. |           |  |
|          | II  | Preparation of complex compounds<br>5. Preparation of tetramminecopper(II) sulphate.<br>6. Preparation of Nickel (II) dimethylglyoxime<br>7. Preparation of trithiourea copper(I) sulphate  |           |  |
|          | III | Colorimetry<br>8. Verification of Beer-Lambert law for $\text{KMnO}_4$ & determination of concentration of the given solution.<br>9. Estimation of iron.<br>10. Estimation of chromium.   |           |  |
|          | IV  | <b>Open-ended experiments - Suggestions</b><br>1. Preparation of double salt/Complex compounds.<br>2. Determination of alkali content in antacid tablets by titration with HCl.<br>3. Determination of available chlorine in bleaching powder.<br>4. Analysis of Ores     |           |  |

| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) |   |    |   |          |

### Detailed Syllabus:

| Module    | Unit                                     | Content  | Hrs       | Marks     |
|-----------|--|--|-----------|-----------|
| <b>I</b>  | <b>Introduction to Quantum mechanics</b> |  | <b>15</b> | <b>32</b> |
|           | 1  | Postulates of quantum mechanics – derivation of time-independent Schrodinger equation  | 2         |           |
|           | 2  | Particle in one dimensional box problem- Schrodinger equation, derivation for expression of energy, quantisation of energy levels, HOMO-LUMO transition in 1,3-butadiene Particle in three dimensional box (no derivation)- Concept of degeneracy of energy levels | 3         |           |
|           | 3  | Harmonic oscillator model, Schrodinger equation and Energy levels (basic idea only, no derivation)   | 1         |           |
|           | 4  | Spherical polar coordinates and Rigid rotor model (no derivation, basic idea only), Expression for energy, Spherical harmonics, Angular momentum   | 2         |           |
|           | 5  | Quantum mechanics of Hydrogen-like atoms - Hamiltonian operator of H-like systems, The Schrodinger equation in spherical polar coordinates, separation of variables  | 3         |           |
|           | 6  | Wave functions or atomic orbitals, radial and angular parts of atomic orbitals. Quantum numbers (n, l, m).   | 2         |           |
|           | 7  | The Stern - Gerlach experiment and the concept of electron spin, spin quantum number.  | 2         |           |
| <b>II</b> | <b>Solid state</b>                       |  | <b>10</b> | <b>22</b> |
|           | 8  | Classification of solids: Amorphous, Crystalline, Lattice points, lattice energy (general idea), unit cell, seven crystal systems.   | 2         |           |
|           | 9  | Weiss and Miller indices - Bravais lattices, Close packing in crystals, examples of simple cubic, bcc and fcc lattices,  | 1         |           |
|           | 10                                       | Explanation of electrical properties using concepts of bands, Explanation of conductors, semiconductors and insulators, Super conductors   | 2         |           |
|           | 11                                       | Magnetic Properties: classification - diamagnetic, paramagnetic, antiferromagnetic, ferro and ferrimagnetic, permanent and temporary magnets.  | 3         |           |

|            |  |   |           |           |
|------------|--|---|-----------|-----------|
|            | 12   | Defects in crystals – stoichiometric and non-stoichiometric defects (Basic ideas only).   | 2         |           |
| <b>III</b> | <b>Gaseous state - I</b>   |   | <b>10</b> | <b>22</b> |
|            | 13   | Characteristics of gases  | 1         |           |
|            | 14   | Postulates of kinetic theory of gases   | 2         |           |
|            | 15   | Maxwell's distribution of molecular velocities – Root mean square, average and most probable velocities.  | 3         |           |
|            | 16   | Collision number – Mean free path – Collision diameter  | 1         |           |
|            | 17   | Viscosity of gases, including their temperature and pressure dependence,  | 1         |           |
|            | 18   | Relation between mean free path and coefficient of viscosity, calculation of $\sigma$ from $\eta$ ; variation of viscosity with temperature and pressure.   | 2         |           |
| <b>IV</b>  | <b>Gaseous state -II</b>   |   | <b>10</b> | <b>22</b> |
|            | 19   | Behaviour of real gases - Deviation from ideal behaviour – Compressibility factor   | 3         |           |
|            | 20   | Causes of deviation from ideal behaviour - van der Waals equation of state (derivation not required) – Expression of van der Waals equation in virial form and calculation of Boyle temperature   | 4         |           |
|            | 21   | PV isotherms of real gases – Continuity of states – Isotherm of van der Waals equation  | 1         |           |
|            | 22   | Critical phenomena (basic idea only) – Critical constants and their determination (derivation not required) – Relationship between critical constants and van der Waals constants.  | 2         |           |
| <b>V</b>   | <b>Practical</b>   |   | <b>30</b> |           |
|            | A minimum of seven experiments must be done. Out of the seven experiments, one is to be open-ended which can be selected by the teacher  |   |           |           |
|            | 1  | Inorganic Qualitative Analysis (semi – micro analysis) <ul style="list-style-type: none"> <li>Reactions of Cations: Study of the reactions of the following cations with a view of their identification and confirmation. <math>\text{NH}_4^+</math>, <math>\text{Pb}^{2+}</math>, <math>\text{Cu}^{2+}</math>, <math>\text{Cd}^{2+}</math>, <math>\text{Al}^{3+}</math>, <math>\text{Ni}^{2+}</math>, <math>\text{Co}^{2+}</math>, <math>\text{Mn}^{2+}</math>, <math>\text{Zn}^{2+}</math>, <math>\text{Ba}^{2+}</math>, <math>\text{Sr}^{2+}</math>, <math>\text{Ca}^{2+}</math>, and <math>\text{Mg}^{2+}</math></li> <li>Systematic qualitative analysis of a solution containing any two cations from the above list. (Minimum 6 mixtures)</li> </ul> | 25        |           |
| 2          | Open ended experiments– Physical chemistry experiments. (Any one experiment) <p>Suggestions</p> <p>Determination of Physical Constants [Determination of colligative properties, Determination of viscosity of a binary liquid solution (Glycerol-water system) Refractometry experiments etc]</p> | 5   |           |           |

| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) |   |    |   |          |

### Detailed Syllabus:

| Module    | Unit                     | Content   | Hrs (75)  | Marks     |
|-----------|--------------------------|---|-----------|-----------|
| <b>I</b>  | <b>Liquid State</b>      |   | <b>15</b> | <b>34</b> |
|           | 1                        | Introduction – Definition and characteristics of liquids - Vapour pressure, surface tension and viscosity - Explanation of these properties on the basis of intermolecular attraction.  | 4         |           |
|           | 2                        | Kinds of solutions –Solubility of gases in liquids – Henry’s law and its applications   | 2         |           |
|           | 3                        | Raoult’s law – Ideal and non-ideal solutions – Dilute solutions.  | 2         |           |
|           | 4                        | Colligative properties – Qualitative treatment of colligative properties – Relative lowering of vapour pressure – Elevation of boiling point,– Depression in freezing point – Osmotic pressure – Reverse osmosis and its applications | 3         |           |
|           | 5                        | – Application of colligative properties in finding molecular weights (thermodynamic derivation not needed) – Abnormal molecular mass – Van’t Hoff factor  | 2         |           |
|           | 6                        | Introduction to liquid crystal phases. Types of liquid crystals: nematic, smectic, cholesteric.   | 1         |           |
|           | 7                        | Applications of liquid crystals.  | 1         |           |
| <b>II</b> | <b>Gaseous State - I</b> |   | <b>10</b> | <b>20</b> |
|           | 8                        | Characteristics of gases  | 1         |           |
|           | 9                        | Postulates of kinetic theory of gases   | 2         |           |
|           | 10                       | Maxwell’s distribution of molecular velocities – Root mean square, average and most probable velocities.  | 3         |           |
|           | 11                       | Collision number – Mean free path – Collision diameter  | 1         |           |
|           | 12                       | Viscosity of gases, including their temperature and pressure dependence,  | 1         |           |

|            |   |   |           |           |
|------------|---|---|-----------|-----------|
|            | 13  | Relation between mean free path and coefficient of viscosity, calculation of $\sigma$ from $\eta$ ; variation of viscosity with temperature and pressure.   | 2         |           |
| <b>III</b> | <b>Gaseous State - II</b>   |   | <b>10</b> | <b>22</b> |
|            | 14  | Behaviour of real gases - Deviation from ideal behaviour – Compressibility factor   | 3         |           |
|            | 15  | Causes of deviation from ideal behaviour - van der Waals equation of state (derivation not required) – Expression of van der Waals equation in virial form and calculation of Boyle temperature                             | 4         |           |
|            | 16  | PV isotherms of real gases – Continuity of states – Isotherm of van der Waals equation  | 1         |           |
|            | 17  | Critical phenomena (basic idea only) – Critical constants and their determination (derivation not required) – Relationship between critical constants and van der Waals constants.  | 2         |           |
| <b>IV</b>  | <b>Electrochemistry</b>   |   | <b>10</b> | <b>22</b> |
|            | 18  | Specific conductance, equivalent conductance and molar conductance  | 2         |           |
|            | 19  | Variation of conductance with dilution - Kohlrausch's law - Degree of ionization of weak electrolytes   | 2         |           |
|            | 20  | Application of conductance measurements – Conductometric titrations.  | 1         |           |
|            | 21  | Galvanic cells – emf of cell and electrode potentials - IUPAC sign convention – Reference electrodes – Standard Hydrogen electrode – Calomel electrode - Standard electrode potential - Nernst equation                     | 2         |           |
|            | 22  | H <sub>2</sub> -O <sub>2</sub> fuel cell. Ostwald's dilution law – Buffer solutions – Buffer action [acetic acid/sodium acetate & NH <sub>4</sub> OH/NH <sub>4</sub> Cl], applications of buffers.                          | 3         |           |
| <b>V</b>   | <b>Practical</b>  |   | <b>30</b> |           |
|            | A minimum of seven experiments must be done. Out of the seven experiments, one is to be open-ended which can be selected by the teacher |   |           |           |

| Pre-requisites | 1. Fundamentals of Gases and Liquids<br>2. Colloids – Definition and classification<br>3. Basic knowledge in analytical principles   |                  |                   |                    |             |
| Course Summary | 1. This course provide the students a thorough knowledge about various properties of gases and liquids<br>2. This course aims to develop an idea about the applications of colloids<br>3. This course also aims to develop proficiency in qualitative analysis and to familiarize physical chemistry experiments |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO   | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used                       |
|------|--|------------------|---------------------|---|
| CO 1 | To explain the characteristics of gases.   | U                | F                   | Instructor-created exams / Quiz /Assignment |
| CO 2 | To analyse the intermolecular attractions and explain the properties of liquids        | An               | C                   | Instructor-created exams / Quiz /Assignment |
| CO 3 | To evaluate the behaviour of solutions   | E                | C                   | Instructor-created exams / Quiz /Assignment |
| CO 4 | To apply the theories of different states of matter and understand their implications. | Ap               | F                   | Instructor-created exams / Quiz /Assignment |

|   |   |    |   |   |
|---|---|----|---|---|
| CO 5  | To appreciate the importance of colloids in chemistry                       | U  | C | Instructor-created exams / Quiz /Assignment |
| CO 6  | To perform qualitative analysis of cations and determine physical constants | Ap | P | Lab work                                    |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |   |    |   |   |

### Detailed Syllabus:

| Module    | Unit  | Content   | Hrs (75)  | Marks     |
|-----------|---|---|-----------|-----------|
| <b>I</b>  | <b>Solutions and Colligative Properties</b> |   | <b>15</b> | <b>32</b> |
|           | 1   | Introduction – Definition and characteristics of liquids - Vapour pressure, surface tension and viscosity - Explanation of these properties on the basis of intermolecular attraction.  | 4         |           |
|           | 2   | Kinds of solutions –Solubility of gases in liquids – Henry’s law and its applications   | 2         |           |
|           | 3   | Raoult’s law – Ideal and non-ideal solutions – Dilute solutions.  | 2         |           |
|           | 4   | Colligative properties – Qualitative treatment of colligative properties – Relative lowering of vapour pressure – Elevation of boiling point,– Depression in freezing point – Osmotic pressure – Reverse osmosis and its applications | 3         |           |
|           | 5   | – Application of colligative properties in finding molecular weights (thermodynamic derivation not needed) – Abnormal molecular mass – Van’t Hoff factor  | 2         |           |
|           | 6   | Introduction to liquid crystal phases. Types of liquid crystals: nematic, smectic, cholesteric.   | 1         |           |
|           | 7   | Applications of liquid crystals.  | 1         |           |
| <b>II</b> | <b>Properties of Gases</b>                  |   | <b>10</b> | <b>22</b> |
|           | 8   | Characteristics of gases  | 1         |           |
|           | 9   | Postulates of kinetic theory of gases   | 2         |           |
|           | 10  | Maxwell’s distribution of molecular velocities – Root mean square, average and most probable velocities.  | 3         |           |

|            |   |   |           |           |
|------------|---|---|-----------|-----------|
|            | 11  | Collision number – Mean free path – Collision diameter  | 1         |           |
|            | 12  | Viscosity of gases, including their temperature and pressure dependence,  | 1         |           |
|            | 13  | Relation between mean free path and coefficient of viscosity, calculation of $\sigma$ from $\eta$ ; variation of viscosity with temperature and pressure.                                       | 2         |           |
| <b>III</b> | <b>Ideal and Real Gases</b>   |   | <b>10</b> | <b>22</b> |
|            | 14  | Behaviour of real gases - Deviation from ideal behaviour – Compressibility factor   | 3         |           |
|            | 15  | Causes of deviation from ideal behaviour - van der Waals equation of state (derivation not required) – Expression of van der Waals equation in virial form and calculation of Boyle temperature | 4         |           |
|            | 16  | PV isotherms of real gases – Continuity of states – Isotherm of van der Waals equation  | 1         |           |
|            | 17  | Critical phenomena (basic idea only) – Critical constants and their determination (derivation not required) – Relationship between critical constants and van der Waals constants.              | 2         |           |
| <b>IV</b>  | <b>Colloids</b>   |   | <b>10</b> | <b>22</b> |
|            | 18  | True solution, colloidal solution and suspension. Classification of colloids: Lyophilic, lyophobic, macromolecular, multimolecular and associated colloids with examples.                       | 2         |           |
|            | 19  | Purification of colloids by electrodialysis and ultrafiltration   | 2         |           |
|            | 20  | Properties of colloids: Brownian movement – Tyndall effect – Electrophoresis.   | 2         |           |
|            | 21  | Origin of charge and stability of colloids – Coagulation - Hardy Schulze rule – Protective colloids - Gold number. Emulsions.   | 2         |           |
|            | 22  | Applications of colloids: Delta formation, medicines, emulsification, cleaning action of detergents and soaps.  | 2         |           |
| <b>V</b>   | <b>Practical</b>  |   | <b>30</b> |           |
|            | A minimum of seven experiments must be done. Out of the seven experiments, one is to be open-ended which can be selected by the teacher |   |           |           |

|   |   |    |  |
|---|---|----|--|
| 1 | Inorganic Qualitative Analysis (semi – micro analysis) <ul style="list-style-type: none"> <li>● Reactions of Cations: Study of the reactions of the following cations with a view of their identification and confirmation. <math>\text{NH}_4^+</math>, <math>\text{Pb}^{2+}</math>, <math>\text{Cu}^{2+}</math>, <math>\text{Cd}^{2+}</math>, <math>\text{Al}^{3+}</math>, <math>\text{Ni}^{2+}</math>, <math>\text{Co}^{2+}</math>, <math>\text{Mn}^{2+}</math>, <math>\text{Zn}^{2+}</math>, <math>\text{Ba}^{2+}</math>, <math>\text{Sr}^{2+}</math>, <math>\text{Ca}^{2+}</math>, and <math>\text{Mg}^{2+}</math></li> <li>● Systematic qualitative analysis of a solution containing any two cations from the above list. | Pre-requisites | 1. Fundamentals of Gaseous and Liquid states of matter<br>2. Basic idea about nucleons<br>3. Basic knowledge in analytical principles   |                  |                   |                    |             |
| Course Summary | 1. This course provides the students a thorough knowledge about gaseous and liquid states of matter and the continuity between them.<br>2. This course aims to introduce the applications of nuclear chemistry<br>3. This course also aims to develop proficiency in qualitative analysis and to familiarize physical chemistry experiments |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used                       |
|-----|---|------------------|---------------------|---|
| CO1 | To understand the fundamental concepts and the properties of gaseous state and how it relates to thermodynamic systems. | U                | F                   | Instructor-created exams / Quiz /Assignment |
| CO2 | To understand the behaviour of ideal and non-ideal solutions  | E                | C                   | Instructor-created exams / Quiz /Assignment |
| CO3 | To analyse the properties of gases and liquids.   | An               | C                   | Instructor-created exams / Quiz /Assignment |
| CO4 | To apply the theories of different states of matter and understand their implications.                                  | Ap               | F                   | Instructor-created exams / Quiz /Assignment |

|  |  |    |   |   |
|--|--|----|---|---|
| CO5  | To describe various processes in nuclear chemistry   | U  | C | Instructor-created exams / Quiz /Assignment |
| CO6  | To analyse cations from a given mixture and enable the students to determine the physical constants. | An | P | Lab work                                    |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) |  |    |   |   |

### Detailed Syllabus:

| Module    | Unit                      | Content   | Hrs (75)  | Marks     |
|-----------|---------------------------|---|-----------|-----------|
| <b>I</b>  | <b>Gaseous State - I</b>  |   | <b>10</b> | <b>22</b> |
|           | 1                         | Characteristics of gases  | 1         |           |
|           | 2                         | Postulates of kinetic theory of gases   | 2         |           |
|           | 3                         | Maxwell's distribution of molecular velocities – Root mean square, average and most probable velocities.  | 3         |           |
|           | 4                         | Collision number – Mean free path – Collision diameter  | 1         |           |
|           | 5                         | Viscosity of gases, including their temperature and pressure dependence,  | 1         |           |
|           | 6                         | Relation between mean free path and coefficient of viscosity, calculation of $\sigma$ from $\eta$ ; variation of viscosity with temperature and pressure.                                       | 2         |           |
| <b>II</b> | <b>Gaseous State - II</b> |   | <b>10</b> | <b>22</b> |
|           | 7                         | Behaviour of real gases - Deviation from ideal behaviour – Compressibility factor   | 3         |           |
|           | 8                         | Causes of deviation from ideal behaviour - van der Waals equation of state (derivation not required) – Expression of van der Waals equation in virial form and calculation of Boyle temperature | 4         |           |
|           | 9                         | PV isotherms of real gases – Continuity of states – Isotherm of van der Waals equation  | 1         |           |
|           | 10                        | Critical phenomena (basic idea only) – Critical constants and their determination (derivation not required) –   | 2         |           |

|            |                                      |  |           |           |
|------------|--------------------------------------|--|-----------|-----------|
|            |                                      | Relationship between critical constants and van der Waals constants.   |           |           |
| <b>III</b> | <b>Solutions and Liquid crystals</b> |  | <b>15</b> | <b>32</b> |
|            | 11                                   | Introduction – Definition and characteristics of liquids - Vapour pressure, surface tension and viscosity - Explanation of these properties on the basis of intermolecular attraction.   | 4         |           |
|            | 12                                   | Kinds of solutions –Solubility of gases in liquids – Henry’s law and its applications  | 2         |           |
|            | 13                                   | Raoult’s law – Ideal and non-ideal solutions – Dilute solutions.   | 2         |           |
|            | 14                                   | Colligative properties – Qualitative treatment of colligative properties – Relative lowering of vapor pressure – Elevation of boiling point,– Depression in freezing point – Osmotic pressure – Reverse osmosis and its applications | 3         |           |
|            | 15                                   | – Application of colligative properties in finding molecular weights (thermodynamic derivation not needed) – Abnormal molecular mass – Van’t Hoff factor   | 2         |           |
|            | 16                                   | Introduction to liquid crystal phases. Types of liquid crystals: nematic, smectic, cholesteric.  | 1         |           |
|            | 17                                   | Applications of liquid crystals.   | 1         |           |
| <b>IV</b>  | <b>Nuclear Chemistry</b>             |  | <b>10</b> | <b>22</b> |
|            | 18                                   | Natural radioactivity – Modes of decay – Group displacement law.   | 2         |           |
|            | 19                                   | Nuclear forces - n/p ratio - Nuclear stability - Mass Defect - Binding energy  | 2         |           |
|            | 10                                   | Isotopes, isobars and isotones with examples. Nuclear fission - Atom bomb - Nuclear fusion – Hydrogen bomb   | 1         |           |
|            | 21                                   | Nuclear reactors   | 1         |           |
|            | 22                                   | Application of radioactive isotopes – <sup>14</sup> C dating, Rock dating, Isotopes as tracers, Radio diagnosis, Radiotherapy. Problems  | 4         |           |
| <b>V</b>   | <b>Practical</b>                     |  | <b>30</b> |           |

|   |  |    |  |  |
|---|--|----|--|--|
|   | A minimum of seven experiments must be done. Out of the seven experiments, one is to be open-ended which can be selected by the teacher  |    |  |  |
| 1 | a) Inorganic Qualitative Analysis (semi – micro analysis) <ul style="list-style-type: none"> <li>• Reactions of Cations: Study of the reactions of the following cations with a view of their identification and confirmation. <math>\text{NH}_4^+</math>, <math>\text{Pb}^{2+}</math>, <math>\text{Cu}^{2+}</math>, <math>\text{Cd}^{2+}</math>, <math>\text{Al}^{3+}</math>, <math>\text{Ni}^{2+}</math>, <math>\text{Co}^{2+}</math>, <math>\text{Mn}^{2+}</math>, <math>\text{Zn}^{2+}</math>, <math>\text{Ba}^{2+}</math>, <math>\text{Sr}^{2+}</math>, <math>\text{Ca}^{2+}</math>, and <math>\text{Mg}^{2+}</math></li> <li>• Systematic qualitative analysis of a solution containing any two cations from the above list. (Minimum 6 mixtures)</li> </ul> | 25 |  |  |
| 2 | b) Open ended experiments– Physical chemistry experiments. (Any one experiment)<br>Suggestions<br><br>Determination of Physical Constants [Determination of colligative properties, Determination of viscosity of a binary liquid solution (Glycerol-water system)<br><br>Refractometry experiments etc.]  | 5  |  |  |

|            | 3                               | Raoult’s law – Ideal and non-ideal solutions – Dilute solutions.  | 2         |           |
|            | 4                               | Colligative properties – Qualitative treatment of colligative properties – Relative lowering of vapour pressure – Elevation of boiling point,– Depression in freezing point – Osmotic pressure – Reverse osmosis and its applications | 3         |           |
|            | 5                               | – Application of colligative properties in finding molecular weights (thermodynamic derivation not needed) – Abnormal molecular mass – Van’t Hoff factor  | 2         |           |
|            | 6                               | Introduction to liquid crystal phases. Types of liquid crystals: nematic, smectic, cholesteric.   | 1         |           |
|            | 7                               | Applications of liquid crystals.  | 1         |           |
| <b>II</b>  | <b>Colloids</b>                 |   | <b>10</b> | <b>22</b> |
|            | 8                               | True solution, colloidal solution and suspension. Classification of colloids: Lyophilic, lyophobic, macromolecular, multimolecular and associated colloids with examples.   | 2         |           |
|            | 9                               | Purification of colloids by electrodialysis and ultrafiltration   | 2         |           |
|            | 10                              | Properties of colloids: Brownian movement – Tyndall effect – Electrophoresis.   | 2         |           |
|            | 11                              | Origin of charge and stability of colloids – Coagulation - Hardy Schulze rule – Protective colloids - Gold number. Emulsions.   | 2         |           |
|            | 12                              | Applications of colloids: Delta formation, medicines, emulsification, cleaning action of detergents and soaps.  | 2         |           |
| <b>III</b> | <b>Adsorption and Catalysis</b> |   | <b>10</b> | <b>22</b> |
|            | 13                              | Adsorption, Physical and chemical adsorption, factors affecting adsorption.   | 2         |           |
|            | 14                              | Adsorption isotherms: Freundlich and Langmuir isotherms (derivation not required) –   | 2         |           |
|            | 15                              | Applications of adsorption.   | 1         |           |

|           |   |   |           |           |
|-----------|---|---|-----------|-----------|
|           | 16  | Catalysis: Homogeneous and heterogenous catalysis – Theories of homogenous and heterogenous catalysis   | 3         |           |
|           | 17  | Enzyme catalysis – Michaelis-Menten equation (derivation not required).   | 2         |           |
| <b>IV</b> | <b>Separation Techniques</b>  |   | <b>10</b> | <b>22</b> |
|           | 18  | Chromatography- Introduction - Adsorption and partition chromatography - Development of chromatograms: frontal, elution and displacement methods  | 2         |           |
|           | 19  | Qualitative and quantitative aspects of principle and applications of column, thin layer, paper and gas chromatography  | 2         |           |
|           | 20  | Rf value – Relative merits of different techniques  | 2         |           |
|           | 21  | Solvent extraction: Classification, principle and efficiency of the technique.  | 2         |           |
|           | 22  | Extraction of metal ions from aqueous solution,   | 2         |           |
| <b>V</b>  | <b>Practical</b>  |   | <b>30</b> |           |
|           | A minimum of seven experiments must be done. Out of the seven experiments, one is to be open-ended which can be selected by the teacher |   |           |           |
|           | 1   | Inorganic Qualitative Analysis (semi – micro analysis) <ul style="list-style-type: none"> <li>• Reactions of Cations: Study of the reactions of the following cations with a view of their identification and confirmation. <math>\text{NH}_4^+</math>, <math>\text{Pb}^{2+}</math>, <math>\text{Cu}^{2+}</math>, <math>\text{Cd}^{2+}</math>, <math>\text{Al}^{3+}</math>, <math>\text{Ni}^{2+}</math>, <math>\text{Co}^{2+}</math>, <math>\text{Mn}^{2+}</math>, <math>\text{Zn}^{2+}</math>, <math>\text{Ba}^{2+}</math>, <math>\text{Sr}^{2+}</math>, <math>\text{Ca}^{2+}</math>, and <math>\text{Mg}^{2+}</math></li> <li>• Systematic qualitative analysis of a solution containing any two cations from the above list. (Minimum 6 mixtures)</li> </ul> | 25        |           |
|           | 2   | Open ended experiments– Physical chemistry experiments. (Any one experiment)<br>Suggestions<br>Determination of Physical Constants [Determination of colligative properties, Determination of viscosity of a binary liquid solution (Glycerol-water system)<br>Refractometry experiments etc]   | 5         |           |

| Pre-requisites | 1. Fundamentals of Thermodynamics<br>2. General idea about state of equilibrium<br>3. Basic idea about order of reaction<br>4. Basic knowledge in analytical principles and structure of molecules  |                  |                   |                    |             |
| Course Summary | 1. This course aims to familiarise the students with the concepts of thermodynamics, kinetics and photochemistry.<br>2. This course also aims to impart an idea about ionic and phase equilibrium<br>3. This course also aims to develop proficiency in analytical tools and to draw molecular structures using softwares |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used                       |
|-----|--|------------------|---------------------|---|
| CO1 | To understand the fundamental concepts thermodynamic processes | U                | F                   | Instructor-created exams / Quiz /Assignment |
| CO2 | To evaluate the importance of ionic and phase equilibrium.     | E                | C                   | Instructor-created exams / Quiz /Assignment |
| CO3 | To analyse the order of different reactions                    | An               | C                   | Instructor-created exams / Quiz /Assignment |

|   |   |    |   |   |
|---|---|----|---|---|
| CO4   | To appreciate the importance of photochemistry                                      | U  | C | Instructor-created exams / Quiz /Assignment |
| CO5   | To create structures of different molecules and calculation of different parameters | C  | P | Lab work                                    |
| CO6   | To enable the students to determine the physical properties (physical constants).   | Ap | P | Lab work                                    |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |   |    |   |   |

### Detailed Syllabus:

| Module     | Unit                              | Content  | Hrs       | Marks     |
|------------|-----------------------------------|--|-----------|-----------|
| <b>I</b>   | <b>Thermodynamics</b>             |  | <b>10</b> | <b>22</b> |
|            | 1                                 | Definition of thermodynamic terms – System – Surroundings – Types of systems,  | 1         |           |
|            | 2                                 | First law of Thermodynamics – Internal energy – Significance of internal energy change –Enthalpy   | 2         |           |
|            | 3                                 | Second law of Thermodynamics – Entropy and spontaneity – Statement of second law based on entropy.   | 2         |           |
|            | 4                                 | Entropy change in phase transitions (derivation not required) – Entropy of fusion, vaporization and sublimation.                                       | 2         |           |
|            | 5                                 | The concept of Gibbs free energy – Physical significance of free energy –  | 1         |           |
|            | 6                                 | Conditions for equilibrium and spontaneity based on $\Delta G$ values – Effect of temperature on spontaneity of reaction. Third law of Thermodynamics. | 2         |           |
| <b>II</b>  | <b>Ionic and Phase Equilibria</b> |  | <b>10</b> | <b>22</b> |
|            | 7                                 | Introduction to acid base theories – pKa, pKb and pH   | 1         |           |
|            | 8                                 | Buffer solutions Mechanism of buffer action – Buffer index – Henderson equation – Applications of buffers  | 2         |           |
|            | 9                                 | Hydrolysis of salts of all types – Degree of hydrolysis – Hydrolysis constant and its relation with Kw   | 1         |           |
|            | 10                                | Solubility product and common ion effect.  | 2         |           |
|            | 11                                | Phases, components and degrees of freedom of a system, criteria of phase equilibrium. Gibbs phase Rule   | 2         |           |
|            | 12                                | Phase diagrams of one-component systems – e.g.: water  | 2         |           |
| <b>III</b> | <b>Chemical Kinetics</b>          |  | <b>15</b> | <b>32</b> |
|            | 13                                | The concept of reaction rates. Effect of temperature, pressure, catalyst and other factors on reaction rates. Order and molecularity of a reaction.    | 3         |           |

|           |   |  |           |           |
|-----------|---|--|-----------|-----------|
|           | 14  | Derivation of integrated rate equations for zero, first and second order reactions (both for equal and unequal concentrations of reactants).   | 5         |           |
|           | 15  | Half-life of a reaction. General methods for determination of order of a reaction.   | 2         |           |
|           | 16  | Concept of activation energy and its calculation from Arrhenius equation (qualitative treatment only)  | 3         |           |
|           | 17  | problems   | 2         |           |
| <b>IV</b> | <b>Photochemistry</b>   |  | <b>10</b> | <b>22</b> |
|           | 18  | Introduction – Difference between thermal and photochemical processes – Characteristics of electromagnetic radiation - Beer Lambert's law.   | 3         |           |
|           | 19  | Laws of photochemistry: Grothus-Draper law and Stark-Einstein's law of photochemical equivalence.  | 1         |           |
|           | 20  | Quantum yield and its explanation with example – Photophysical processes: Jablonski diagram – Fluorescence – Phosphorescence.  | 3         |           |
|           | 21  | Photosensitization, Role of photochemical reactions in biochemical processes   | 2         |           |
|           | 22  | Photostationary states – Chemiluminescence   | 1         |           |
| <b>V</b>  | <b>Practical</b>  |  | <b>30</b> |           |
|           | A minimum of seven experiments must be done. Out of the seven experiments, one is to be open-ended which can be selected by the teacher |  |           |           |
|           | 1   | <ul style="list-style-type: none"> <li>• Absorption (and transmittance) measurements of a colourless and a coloured light absorbing substance in a solution by using a spectrophotometer either experimentally or by simulation. | Pre-requisites | 1. Fundamental Concepts of organic chemistry- Nomenclature, Isomerism, Functional groups, Homologous series                                     |                  |                   |                    |             |
| Course Summary | This course explores basics of organic chemistry reaction mechanism, Reactions and mechanism of important functional groups and stereochemistry |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used                         |
|-----|--|------------------|---------------------|---|
| CO1 | To understand the basic concepts of reaction mechanisms  | U                | C                   | Instructor-created exams / Assignment         |
| CO2 | To realise types of organic reactions and intermediates  | Ap               | P                   | Instructor-created exams Assignment / quizzes |
| CO3 | To analyse important application of functional groups  | An               | P                   | Assignment / seminar/Internalexam             |
| CO4 | To understand how different functional groups confer distinct properties and reactivity, influencing the chemical behaviour of molecules | U                | C                   | Assignment/Seminar/                           |
| CO5 | To realise the importance of stereoisomerism, optical activity and chirality/  | U                | C                   | Assignment/Group Discussion                   |
| CO6 | To enable the students to develop analytical skills in organic qualitative analysis.   | Ap               | P                   | Observation of practical skill/Viva voce      |

\* - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)  
 # - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)  
 Metacognitive Knowledge (M)

**Detailed Syllabus:**

| Module    | Unit  | Content  | Hrs       | Marks     |
|-----------|---|--|-----------|-----------|
| <b>I</b>  | <b>Basic concepts of Organic Chemistry.</b>             |  | <b>15</b> | <b>30</b> |
|           | 1   | Introduction- Homolysis and Heterolysis with suitable examples. Curley arrow rules. Reagents – Electrophiles, nucleophiles and free radicals   | 2         |           |
|           | 2   | Electron Displacement Effects: Inductive effect, Definition - Characteristics - +I and -I groups. Applications: Acidity of carboxylic acids-effect of substituents.  | 2         |           |
|           | 3   | Electromeric effect: Definition – Characteristics - +E effect and -E effect - Addition of H <sup>+</sup> to ethene and addition of CN <sup>-</sup> to acetaldehyde.  | 1         |           |
|           | 4   | . Mesomeric effect: Definition, Characteristics - +M and -M groups. Applications: Comparison of electron density in benzene, nitrobenzene, Phenol and Aniline  | 3         |           |
|           | 5   | Hyperconjugation effect: Definition – Characteristics. Applications: comparison of stability of But-1-ene and But-2-ene.   | 1         |           |
|           | 6   | Steric effect  | 1         |           |
|           | 7   | Reaction intermediate: Type, shape and stability of Carbocations, carbanions and free radicals.  | 3         |           |
|           | 8   | Types of organic reactions: Addition, Elimination, Substitution, Rearrangement and Redox reactions- Definition and one example   | 2         |           |
| <b>II</b> | <b>Chemistry of alkyl halides, Alcohols and phenols</b> |  | <b>10</b> | <b>23</b> |
|           | 9   | <b>Alkyl halides</b> Preparation of alkyl halides from alkanes and alkenes – Wurtz reaction and Fittig's reaction. SN1 and SN2 reactions of alkyl halides-Mechanism and stereochemistry.                             | 3         |           |
|           | 10  | <b>Alcohols:</b> Preparation from Grignard reagent – Preparation of ethanol from molasses – Wash, rectified spirit, absolute alcohol, denatured spirit, proof spirit and power alcohol (mention only).               | 2         |           |
|           | 11  | <b>Reactions of Alcohols</b> -Substitution, dehydration, oxidation and esterification.<br>Haloform reaction - iodoform test – Luca's test – Chemistry of methanol poisoning, harmful effect of ethanol in human body | 3         |           |

|            |  |   |           |           |
|------------|--|---|-----------|-----------|
|            | 12   | <b>Phenols:</b> Preparation from chlorobenzene. Comparison of acidity of phenol, p-nitrophenol and p-methoxyphenol –.   | 1         |           |
|            | 13   | Preparation and uses of phenolphthalein   | 1         |           |
| <b>III</b> | <b>Chemistry of carbonyl compounds and amines</b>  |   | <b>10</b> | <b>22</b> |
|            | 14   | <b>Aldehydes &amp; Ketones:</b> Preparation from alcohols – Comparison of reactivity of aldehydes and ketones. Nucleophilic addition reactions-addition of HCN and bisulphite. Clemmension reduction and wolff kishner reduction  | 3         |           |
|            | 15   | <b>Carboxylic Acids:</b> Preparation from Grignard reagent – Decarboxylation – Kolbe electrolysis.  | 2         |           |
|            | 16   | <b>Amines:</b> Preparation from nitro compounds – Hofmann’s bromamide reaction – Hofmann’s carbylamines reaction. Basicity: Comparison of basicity of ammonia, methylamine and aniline  | 3         |           |
|            | 17   | <b>Diazonium salts:</b> Preparation and synthetic application of benzene diazonium chloride.  | 1         |           |
|            | 18   | Preparation and uses of methyl orange   | 1         |           |
| <b>IV</b>  | <b>Stereochemistry</b>                             |   | <b>10</b> | <b>23</b> |
|            | 19   | <b>Stereoisomerism:</b> definition, classification. Geometrical Isomerism: Definition, Condition, Geometrical isomerism in but-2-ene and but-2-ene-1,4-dioic acid. cis and trans isomerism, E and Z configurations. Methods of distinguishing geometrical isomers using melting point and dipolemoment. | 3         |           |
|            | 20   | <b>Conformations:</b> Newman projection, Saw-horse projection. Conformations of ethane, n-butane, and cyclohexane. Relative stability and energy diagrams. Conformation of methyl cyclohexane.  | 3         |           |
|            | 21   | <b>Optical Isomerism</b> - Optical Activity, Specific Rotation, Chirality/Asymmetry, Enantiomers, Molecules with one and two chiral-centres-Lactic acid and tartaric acid. Distereoisomers, meso-structures .   | 3         |           |
|            | 22   | Racemic, mixture. Racemisation and resolution   | 1         |           |
| <b>V</b>   | <b>PRACTICALS RELATED TO THE MODULE II and III</b> |   | <b>30</b> |           |
|            | 1  | Reactions of Organic Compounds  | 4         |           |
|            | 2  | II. Functional groups test for<br>1. Phenols -Phenol<br>2. Amines-Aniline<br>3. Aldehydes and ketones -benzaldehyde, benzophenone).<br>4. Carboxylic acid (benzoic acid, cinnamic acid).<br>5. Carbohydrates (glucose).<br>6. Amides (benzamide, urea   | 20        |           |
|            | 3  | III.Preparation of organic compounds-   | 6         |           |

| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |   |    |   |  |

### Detailed Syllabus:

| Module    | Unit  | Content  | Hrs       | Marks     |
|-----------|---|--|-----------|-----------|
| <b>I</b>  | <b>Basic concepts of Organic Chemistry.</b>       |  | <b>15</b> | <b>30</b> |
|           | 1   | Introduction- Homolysis and Heterolysis with suitable examples. Curley arrow rules. Reagents – Electrophiles, nucleophiles and free radicals   | 2         |           |
|           | 2   | Electron Displacement Effects: Inductive effect, Definition - Characteristics - +I and -I groups. Applications: Acidity of carboxylic acids-effect of substituents.                    | 2         |           |
|           | 3   | Electromeric effect: Definition – Characteristics - +E effect and - E effect - Addition of H <sup>+</sup> to ethene and addition of CN <sup>-</sup> to acetaldehyde.                   | 1         |           |
|           | 4   | . Mesomeric effect: Definition, Characteristics - +M and -M groups. Applications: Comparison of electron density in benzene, nitrobenzene, Phenol and Aniline                          | 3         |           |
|           | 5   | Hyperconjugation effect: Definition – Characteristics. Applications: comparison of stability of But-1-ene and But-2-ene.   | 1         |           |
|           | 6   | Steric effect  | 1         |           |
|           | 7   | Reaction intermediate: Type, shape and stability of Carbocations, carbanions and free radicals.  | 3         |           |
|           | 8   | Types of organic reactions: Addition, Elimination, Substitution, Rearrangement and Redox reactions-Definition and one example  | 2         |           |
| <b>II</b> | <b>Chemistry of carbonyl compounds and amines</b> |  | <b>10</b> | <b>22</b> |
|           | 9   | <b>Aldehydes &amp; Ketones:</b> Preparation from alcohols – Comparison of reactivity of aldehydes and ketones. Nucleophilic addition reactions-addition of HCN and bisulphite.         | 3         |           |
|           | 10  | <b>Carboxylic Acids:</b> Preparation from Grignard reagent – Decarboxylation – Kolbe electrolysis  | 2         |           |
|           | 11  | <b>Amines:</b> Preparation from nitro compounds – Hofmann's bromamide reaction – Hofmann's carbylamines reaction. Basicity: Comparison of basicity of ammonia, methylamine and aniline | 3         |           |

|            |  |   |           |           |
|------------|--|---|-----------|-----------|
|            | 12   | <b>Diazonium salts:</b> Preparation and synthetic application of benzene diazonium chloride   | 1         |           |
|            | 13   | Preparation and uses of methyl orange   | 1         |           |
| <b>III</b> | <b>Carbohydrates</b>                               |   | <b>10</b> | <b>23</b> |
|            | 14   | Classification- Monosaccharides, oligosaccharides, and polysaccharides, Aldose and Ketose, reducing and nonreducing sugars  | 2         |           |
|            | 15   | Cyclic structure of Ribose, Deoxy ribose. glucose and fructose.   | 2         |           |
|            | 16   | D and L forms of glyceraldehyde, Glucose - manufacture of glucose from starch, physical properties, uses, Structure of D and L glucose  | 2         |           |
|            | 17   | Analytical test for glucose - effect of heating, effect of conc sulphuric acid, Fehling's test, Tollens test, Molisches test.   | 1         |           |
|            | 18   | Fructose- preparation from cane sugar, properties. Sucrose - manufacture of sucrose from sugar cane juice. Starch and cellulose - physical properties, structure (Basic ideas only)   | 3         |           |
| <b>IV</b>  | <b>Proteins and Nucleic acids</b>                  |   | <b>10</b> | <b>23</b> |
|            | 19   | Amino acids – Classification – Structure of amino acids – Zwitter ion formation – Isoelectric point. Peptide linkage, polypeptides and proteins. Primary, secondary and tertiary structure of proteins. Denaturation of proteins. Tests for proteins: Xanthoprotein test, Biuret test and Ninhydrin test. | 3         |           |
|            | 20   | Enzymes, characteristics and examples   | 1         |           |
|            | 21   | Nucleic acids: Introduction, constituents of nucleic acids – nitrogenous bases, nucleosides and nucleotides. Double helical structure of DNA. Difference between DNA & RNA – DNA finger printing and its applications   | 3         |           |
|            | 22   | Lipids: Classification- Fats and oils. Biological functions of lipids. Steroids :classification. Structure and biological functions of cholesterol, testosterone and progesterone. Elementary ideas of HDL and LDL  | 3         |           |
| <b>V</b>   | <b>PRACTICALS RELATED TO THE MODULE II and III</b> |   | <b>30</b> |           |
|            | 1  | Reactions of Organic Compounds  | 4         |           |
|            | 2  | II. Functional groups test for<br>1. Phenols -Phenol<br>2. Amines-Aniline<br>3. Aldehydes and ketones -benzaldehyde, benzophenone).<br>4. Carboxylic acid (benzoic acid, cinnamic acid).<br>5. Carbohydrates (glucose).<br>6. Amides (benzamide, urea   | 20        |           |
|            | 3  | III. Preparation of organic compounds-  | 6         |           |

| <b>I</b>  | <b>Basic concepts of Organic Chemistry</b>              |  | <b>15</b> | <b>30</b> |
|           | 1   | Homolytic and heterolytic fission with suitable examples. Curly arrow rules. Types of reagents -Electrophiles, Nucleophiles and Free radicals.   | 1         |           |
|           | 2   | Electron Displacement Effects: Inductive effect, definition, Characteristics - +I and -I groups. Applications: Acidity of carboxylic acids-effect of substituents.                                       | 2         |           |
|           | 3   | Electromeric effect: Definition, Characteristics - +E effect and -E effect. Addition of H <sup>+</sup> to ethene and addition of CN <sup>-</sup> to acetaldehyde.  | 2         |           |
|           | 4   | Mesomeric effect: Definition, Characteristics - +M and -M groups. Applications: Comparison of electron density in benzene, nitrobenzene, phenol and aniline.   | 2         |           |
|           | 5   | Hyperconjugation effect: Definition, Characteristics. Applications: comparison of stability of But-1-ene and But-2-ene.  | 2         |           |
|           | 6   | Steric effect and its importance in reactivity.  | 1         |           |
|           | 7   | Reaction intermediate: Type, shape and stability of carbocations, carbanions and free radicals.  | 3         |           |
|           | 8   | Types of organic reactions: Addition, Elimination, Substitution, Rearrangement and Redox reactions-Definition and example.   | 2         |           |
| <b>II</b> | <b>Chemistry of Alkyl halides, Alcohols and Phenols</b> |  | <b>10</b> | <b>23</b> |
|           | 9   | Alkyl halides- Preparation of alkyl halides from alkanes and alkenes-Wurtz reaction and Fittig's reaction. SN <sup>1</sup> and SN <sup>2</sup> reactions of alkyl halides-Mechanism and stereochemistry. | 3         |           |

|            |   |   |           |           |
|------------|---|---|-----------|-----------|
|            | 10  | Alcohols: Preparation from Grignard reagent – Preparation of ethanol from molasses – Wash, rectified spirit, absolute alcohol, denatured spirit, proof spirit and power alcohol (mention only).   | 2         |           |
|            | 11  | Reactions of alcohols-Substitution, dehydration, oxidation and esterification.<br>Haloform reaction - iodoform test -Luca's test-Chemistry of methanol poisoning, harmful effect of ethanol in human body.  | 3         |           |
|            | 12  | Phenols: Preparation from chlorobenzene. Comparison of acidity of phenol, p-nitrophenol and p-methoxyphenol.  | 1         |           |
|            | 13  | Preparation and uses of phenolphthalein.  | 1         |           |
| <b>III</b> | <b>Chemistry of Carbonyl compounds and Amines</b> |   | <b>10</b> | <b>22</b> |
|            | 14  | Aldehydes & Ketones: Preparation from alcohols. Comparison of reactivity of aldehydes and ketones.  | 1         |           |
|            | 15  | Nucleophilic addition reactions in aldehydes and ketone. Addition of HCN and bisulphite. Clemmensen reduction and Wolff Kishner reduction.  | 2         |           |
|            | 16  | Carboxylic Acids: Preparation from Grignard reagent- Decarboxylation-Kolbe electrolysis.  | 2         |           |
|            | 17  | Amines: Preparation from nitro compounds-Hofmann's bromamide reaction, Hofmann's carbylamines reaction. Basicity: Comparison of basicity of ammonia, methylamine and aniline.   | 3         |           |
|            | 18  | Diazonium salts: Preparation and synthetic application of benzene diazonium chloride. Preparation and uses of methyl orange.  | 2         |           |
| <b>IV</b>  | <b>Biomolecules</b>                               |   | <b>10</b> | <b>23</b> |
|            | 19  | Carbohydrates: Classification with examples-cyclic structures of glucose and fructose - Applications of carbohydrates.  | 2         |           |
|            | 20  | Proteins: Amino acids- Classification, Zwitter ion formation – Peptide linkage – Polypeptides and proteins –Primary, secondary and tertiary structure of proteins – Globular and fibrous proteins – Denaturation of proteins. Enzymes: Characteristics and examples.          | 4         |           |
|            | 21  | Natural products: Alkaloids: Extraction, Classification, Source, structure and physiological functions of nicotine, coniine and piperine.   | 1         |           |
|            | 22  | Terpenes: Classification with examples, Isoprene rule – Isolation of essential oils by steam distillation – Uses of lemongrass oil, eucalyptus oil and sandalwood oil – Source, structure and uses of citral and menthol – Natural rubber – Vulcanization and its advantages. | 3         |           |
| <b>V</b>   | <b>Organic Chemistry Practicals</b>               |   | <b>30</b> |           |
|            | 23  | General Reactions of Organic Compounds  | 4         |           |

| Pre-requisites | 1. Basic concepts of Organic Chemistry<br>2. Chemistry and its importance in daily life  |                  |                   |                    |             |
| Course Summary | This course ensure students to acquire a profound understanding of Organic Chemistry, emphasizing fundamental reactions, concepts and its implication in daily life. |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used                 |
|-----|---|------------------|---------------------|---------------------------------------|
| CO1 | To understand the fundamental concepts of reaction mechanisms through the step by step processes involved in chemical reactions           | U                | C                   | Instructor-created exams / Assignment |
| CO2 | To recognize the various types of organic reactions and reaction intermediates  | Ap               | P                   | Assignment / seminar/quizzes          |
| CO3 | To understand how different functional groups confer distinct properties and reactivity, influencing the chemical behaviour of molecules. | U                | C                   | Assignment/Seminar/Internal exam      |
| CO4 | To understand the importance of Chemistry in Daily Life.  | Ap               | P                   | Group work /Assignment                |
| CO5 | To understand the role of Chemistry in human  | Ap               | P                   | Group work /Assignment                |

|   |   |    |   |  |
|---|---|----|---|--|
|   | happiness index and life expectancy.  |    |   |  |
| CO6   | To empower students to cultivate analytical skills in organic qualitative/quantitative analysis by emphasizing systematic approaches. | Ap | P | Observation of practical skill/Viva voce |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |   |    |   |  |

### Detailed Syllabus:

| Module    | Unit  | Content  | Hrs       | Marks     |
|-----------|---|--|-----------|-----------|
| <b>I</b>  | <b>Basic concepts of Organic Chemistry</b>              |  | <b>15</b> | <b>30</b> |
|           | 1   | Homolytic and heterolytic fission with suitable examples. Curly arrow rules. Types of reagents -Electrophiles, Nucleophiles and Free radicals.   | 1         |           |
|           | 2   | Electron Displacement Effects: Inductive effect, definition, Characteristics - +I and -I groups. Applications: Acidity of carboxylic acids-effect of substituents.   | 2         |           |
|           | 3   | Electromeric effect: Definition, Characteristics - +E effect and -E effect. Addition of H <sup>+</sup> to ethene and addition of CN <sup>-</sup> to acetaldehyde.  | 2         |           |
|           | 4   | Mesomeric effect: Definition, Characteristics - +M and -M groups. Applications: Comparison of electron density in benzene, nitrobenzene, phenol and aniline.   | 2         |           |
|           | 5   | Hyperconjugation effect: Definition, Characteristics. Applications: comparison of stability of But-1-ene and But-2-ene.  | 2         |           |
|           | 6   | Steric effect and its importance in reactivity.  | 1         |           |
|           | 7   | Reaction intermediate: Type, shape and stability of carbocations, carbanions and free radicals.  | 3         |           |
|           | 8   | Types of organic reactions: Addition, Elimination, Substitution, Rearrangement and Redox reactions-Definition and example.   | 2         |           |
| <b>II</b> | <b>Chemistry of Alkyl halides, Alcohols and Phenols</b> |  | <b>10</b> | <b>22</b> |
|           | 9   | Alkyl halides- Preparation of alkyl halides from alkanes and alkenes-Wurtz reaction and Fittig's reaction. SN <sup>1</sup> and SN <sup>2</sup> reactions of alkyl halides-Mechanism and stereochemistry.   | 3         |           |
|           | 10  | Alcohols: Preparation from Grignard reagent – Preparation of ethanol from molasses – Wash, rectified spirit, absolute alcohol, denatured spirit, proof spirit and power alcohol (mention only).            | 2         |           |
|           | 11  | Reactions of alcohols-Substitution, dehydration, oxidation and esterification.<br>Haloform reaction - iodoform test -Luca's test-Chemistry of methanol poisoning, harmful effect of ethanol in human body. | 3         |           |

|            |   |   |           |           |
|------------|---|---|-----------|-----------|
|            | 12  | Phenols: Preparation from chlorobenzene. Comparison of acidity of phenol, p-nitrophenol and p-methoxyphenol.  | 1         |           |
|            | 13  | Preparation and uses of phenolphthalein.  | 1         |           |
| <b>III</b> | <b>Chemistry of Carbonyl compounds and Amines</b> |   | <b>10</b> | <b>23</b> |
|            | 14  | Aldehydes & Ketones: Preparation from alcohols. Comparison of reactivity of aldehydes and ketones.  | 1         |           |
|            | 15  | Nucleophilic addition reactions in aldehydes and ketone. Addition of HCN and bisulphite. Clemmensen reduction and Wolff Kishner reduction.  | 2         |           |
|            | 16  | Carboxylic Acids: Preparation from Grignard reagent- Decarboxylation-Kolbeelectrolysis.   | 2         |           |
|            | 17  | Amines: Preparation from nitro compounds-Hofmann's bromamide reaction, Hofmann's carbylamines reaction. Basicity: Comparison of basicity of ammonia, methylamine and aniline.   | 3         |           |
|            | 18  | Diazonium salts: Preparation and synthetic application of benzene diazonium chloride. Preparation and uses of methyl orange.  | 2         |           |
| <b>IV</b>  | <b>Chemistry in Daily Life</b>                    |   | <b>10</b> | <b>23</b> |
|            | 19  | Petrochemicals: Name, carbon range and uses of fractions of petroleum distillation. Octane number, Cetane number, Flash point. LPG and CNG: Composition and uses.   | 2         |           |
|            | 20  | Pharmaceuticals: Drug - Chemical name, generic name and trade names with examples. Antipyretics, analgesics, antibiotics, antacids, antiseptics (definition and examples, structure not expected).  | 2         |           |
|            | 21  | Dyes: Definition- Requirements of a dye. Theories of colour and chemical constitution. Structure and applications of martius yellow, indigo and alizarin.   | 3         |           |
|            | 22  | Food: Food additives: Food preservatives, artificial sweeteners and antioxidants (definition and examples, structures not required) Commonly used permitted and non-permitted food colours (structures not required).   | 3         |           |
| <b>V</b>   | <b>Organic Chemistry Practicals</b>               |   | <b>30</b> |           |
|            | 23  | General Reactions of Organic Compounds  | 4         |           |
|            | 24  | Study of the reactions of functional groups from the following list.<br>1. Phenols –(phenol)<br>2. Amines-(aniline)<br>3. Aldehydes and Ketones-(benzaldehyde, benzophenone).<br>4. Carboxylic acids (benzoic acid, cinnamic acid).<br>5. Carbohydrates (glucose).<br>6. Amides (benzamide, urea) | 20        |           |
|            | 25  | Organic Preparations.   | 6         |           |

| Course Summary | This course ensure students to acquire a profound understanding of Organic Chemistry and Polymer Chemistry by emphasizing fundamental reactions and concepts. |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used                  |
|-----|---|------------------|---------------------|--|
| CO1 | To understand the fundamental concepts of reaction mechanisms through the step by step processes involved in chemical reactions           | U                | C                   | Instructor-created exams / Assignments |
| CO2 | To recognize the various types of organic reactions and reaction intermediates  | Ap               | P                   | Assignment / seminar/quizes            |
| CO3 | To understand how different functional groups confer distinct properties and reactivity, influencing the chemical behaviour of molecules. | U                | C                   | Assignment/Seminar/Class test          |
| CO4 | To understand the significance of polymers in daily life by recognizing their ubiquitous presence in materials and products.              | Ap               | P                   | Group work /Assignment                 |

|   |   |    |   |  |
|---|---|----|---|--|
| CO5   | To understand the applications of different polymers.   | Ap | P | Group work /Assignment                   |
| CO6   | To empower students to cultivate analytical skills in organic qualitative/quantitative analysis by emphasizing systematic approaches. | Ap | P | Observation of practical skill/Viva voce |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |   |    |   |  |

### Detailed Syllabus:

| Module    | Unit  | Content   | Hrs       | Marks     |
|-----------|---|---|-----------|-----------|
| <b>I</b>  | <b>Basic concepts of Organic Chemistry</b>              |   | <b>15</b> | <b>32</b> |
|           | 1   | Homolytic and heterolytic fission with suitable examples. Curly arrow rules. Types of reagents -Electrophiles, Nucleophiles and Free radicals.  | 1         |           |
|           | 2   | Electron Displacement Effects: Inductive effect, definition, Characteristics - +I and -I groups. Applications: Acidity of carboxylic acids-effect of substituents.  | 2         |           |
|           | 3   | Electromeric effect: Definition, Characteristics - +E effect and -E effect. Addition of H <sup>+</sup> to ethene and addition of CN <sup>-</sup> to acetaldehyde.   | 2         |           |
|           | 4   | Mesomeric effect: Definition, Characteristics - +M and -M groups. Applications: Comparison of electron density in benzene, nitrobenzene, phenol and aniline.  | 2         |           |
|           | 5   | Hyperconjugation effect: Definition, Characteristics. Applications: comparison of stability of But-1-ene and But-2-ene.   | 2         |           |
|           | 6   | Steric effect and its importance in reactivity.   | 1         |           |
|           | 7   | Reaction intermediate: Type, shape and stability of carbocations, carbanions and free radicals.   | 3         |           |
|           | 8   | Types of organic reactions: Addition, Elimination, Substitution, Rearrangement and Redox reactions- Definition and example.   | 2         |           |
| <b>II</b> | <b>Chemistry of Alkyl halides, Alcohols and Phenols</b> |   | <b>10</b> | <b>22</b> |
|           | 9   | Alkyl halides- Preparation of alkyl halides from alkanes and alkenes- Wurtz reaction and Fittig's reaction. SN <sup>1</sup> and SN <sup>2</sup> reactions of alkyl halides-Mechanism and stereochemistry. | 3         |           |
|           | 10  | Alcohols: Preparation from Grignard reagent – Preparation of ethanol from molasses – Wash, rectified spirit, absolute alcohol, denatured spirit,  | 2         |           |

|            |   |   |           |           |
|------------|---|---|-----------|-----------|
|            |   | proof spirit and power alcohol (mention only).  |           |           |
|            | 11  | Reactions of alcohols-Substitution, dehydration, oxidation and esterification.<br>Haloform reaction - iodoform test -Luca's test-Chemistry of methanol poisoning, harmful effect of ethanol in human body.  | 3         |           |
|            | 12  | Phenols: Preparation from chlorobenzene. Comparison of acidity of phenol, p-nitrophenol and p-methoxyphenol.  | 1         |           |
|            | 13  | Preparation and uses of phenolphthalein.  | 1         |           |
| <b>III</b> | <b>Chemistry of Carbonyl compounds and Amines</b> |   | <b>10</b> | <b>22</b> |
|            | 14  | Aldehydes & Ketones: Preparation from alcohols.<br>Comparison of reactivity of aldehydes and ketones.   | 1         |           |
|            | 15  | Nucleophilic addition reactions in aldehydes and ketone.<br>Addition of HCN and bisulphite. Clemmensen reduction and Wolff Kishner reduction.   | 2         |           |
|            | 16  | Carboxylic Acids: Preparation from Grignard reagent-<br>Decarboxylation-Kolbe electrolysis.   | 2         |           |
|            | 17  | Amines: Preparation from nitro compounds-Hofmann's bromamide reaction, Hofmann's carbylamines reaction.<br>Basicity: Comparison of basicity of ammonia, methylamine and aniline.  | 3         |           |
|            | 18  | Diazonium salts: Preparation and synthetic application of benzene diazonium chloride. Preparation and uses of methyl orange.  | 2         |           |
| <b>IV</b>  | <b>Polymers</b>                                   |   | <b>10</b> | <b>22</b> |
|            | 19  | Classification based on origin (natural, semi synthetic and synthetic), synthesis (addition and condensation), structure (linear, branched chain and cross linked) and intermolecular forces (elastomers, fibres, thermoplastics and thermosetting polymers). | 3         |           |
|            | 20  | Tacticity- Types of Polymerisation. Chain and step growth polymerizations- Free radical, ionic and coordination polymerizations.  | 2         |           |
|            | 21  | Structure and applications of synthetic rubbers (Buna-S, Buna-N and neoprene), synthetic fibres (Nylon 66, Nylon 6 and dacron), thermoplastics (polyethene, polystyrene, PVC and teflon) and thermosetting plastics (bakelite and melmac).                    | 3         |           |
|            | 22  | Uses of kevlar, nomex and lexan- Biodegradable polymers (PGA, PLA and PHBV) and their applications.   | 2         |           |
| <b>V</b>   | <b>Organic Chemistry Practicals</b>               |   | <b>30</b> |           |
|            | 23  | General Reactions of Organic Compounds  | 4         |           |
|            | 24  | Study of the reactions of functional groups from the following list.<br>1. Phenols -(phenol)  | 20        |           |

|  |    |   |   |  |
|--|----|---|---|--|
|  |    | 2. Amines-(aniline)<br>3. Aldehydes and Ketones-(benzaldehyde, benzophenone).<br>4. Carboxylic acids (benzoic acid, cinnamic acid).<br>5. Carbohydrates (glucose).<br>6. Amides (benzamide, urea) |   |  |
|  | 25 | Organic Preparations.   | 6 |  |

| Pre-requisites | 1. Fundamental Concepts of organic chemistry- Nomenclature, isomerism, Functional groups, Homologous series<br>2. Basic concept of organic reaction mechanism, Chemistry of functional group |                  |                   |                    |             |
| Course Summary | This course explores organic spectroscopy, Chemistry of aromatic hydrocarbons, applications like medicinal chemistry and separation techniques   |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used                 |
|-----|---|------------------|---------------------|---------------------------------------|
| CO1 | To understand the fundamental concept of various spectroscopic techniques | U                | C                   | Exams/Assignment                      |
| CO2 | To provide a comprehensive understanding of aromatic hydrocarbons         | U                | C                   | Exams/Assignment/<br>Group discussion |
| CO3 | To provide basic knowledge of medicinal chemistry                         | U                | C                   | Internal test/Seminar                 |
| CO4 | To understand role of chemistry in human life                             | An               | C                   | Seminar/Assignment/<br>/Qizes         |
| CO5 | To provide concepts various separation and purification techniques        | U                | P                   | Exams/Seminar                         |

|   |   |    |   |               |
|---|---|----|---|---------------|
| CO6   | To empower students in various separation and purification techniques | Ap | P | Lab work/Viva |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |   |    |   |               |

### Detailed Syllabus:

| Module    | Unit                                      | Content   | Hrs       | Marks     |
|-----------|---|---|-----------|-----------|
| <b>I</b>  | <b>Organic spectroscopy</b>               |   | <b>15</b> | <b>30</b> |
|           | 1   | Origin of spectra - Interaction of electromagnetic radiation with matter. Different types of energy levels in molecules: Rotational, vibrational and electronic levels.   | 2         |           |
|           | 2   | Statement of Born-Oppenheimer approximation - Fundamental laws of spectroscopy and selection rules (derivations not required).  | 1         |           |
|           | 3   | <i>UV-Visible Spectroscopy</i> : Basic principle- Beer-Lambert's law - Electronic transitions in molecules ( $\sigma \rightarrow \sigma^*$ , $n \rightarrow \sigma^*$ , $\pi \rightarrow \pi^*$ and $n \rightarrow \pi^*$ ) | 2         |           |
|           | 4   | Chromophore and auxochrome - Red shift and blue shift.  | 1         |           |
|           | 5   | $\lambda_{\max}$ calculation for dienes (substituted butadienes)  | 2         |           |
|           | 6   | IR spectroscopy- basic principles, factors affecting absorption frequencies, fingerprint and functional group region.-Characteristic stretching frequencies of O-H, N-H, C-H, C=C, C=N and C=O functional groups            | 3         |           |
|           | 7   | NMR Spectroscopy: Introduction - Chemical shift and spin-spin coupling -  | 2         |           |
|           | 8   | Application in elucidating the structure of ethanol, propanal and acetone (detailed study not required).  | 2         |           |
| <b>II</b> | <b>Chemistry of Aromatic hydrocarbons</b> |   | <b>12</b> | <b>27</b> |
|           | 9   | Nomenclature and isomerism in substituted benzene. Structure and stability of benzene: Kekule, resonance and molecular orbital description.   | 2         |           |
|           | 10  | Mechanism of aromatic electrophilic substitution: Halogenation, nitration, sulphonation and Friedel-Craft's reactions   | 3         |           |
|           | 11  | Orientating effect of common substituents in aromatic electrophilic substitution  | 2         |           |
|           | 12  | Aromaticity and Huckel's rule   | 2         |           |

|            |   |   |           |           |
|------------|---|---|-----------|-----------|
|            | 13  | Application to benzenoid (benzene, naphthalene and anthracene) and nonbenzenoid (pyrrole, pyridine and indol) aromatic compounds.   | 3         |           |
| <b>III</b> | <b>Medicinal Chemistry</b>                          |   | <b>10</b> | <b>23</b> |
|            | 14  | Drug: Chemical name, generic name and trade names with examples   | 2         |           |
|            | 15  | Terminology: Prodrug, pharmacy, pharmacology, pharmacophore, pharmacognosy, pharmacodynamics and pharmacokinetics (elementary idea only).   | 2         |           |
|            | 16  | Antipyretics, analgesics, antacids, antihistamines, antibiotics, antiseptics, disinfectants, anaesthetics(definition and examples).   | 3         |           |
|            | 17  | tranquilizers, narcotics, antidepressants and psychedelic drugs (definition and examples).  | 2         |           |
|            | 18  | Synthesis of aspirin and Paracetamol  | 1         |           |
| <b>IV</b>  | <b>Purification and Characterization Techniques</b> |   | <b>8</b>  | <b>18</b> |
|            | 19  | Distillation- Simple, fractional, steam and vacuum distillations  | 2         |           |
|            | 20  | recrystallisation, sublimation, solvent extraction  | 2         |           |
|            | 21  | Chromatography, stationary phase, mobile phase, Rf values   | 2         |           |
|            | 22  | TLC, Column chromatography, HPLC and GC (basic concepts only).  |           |           |
| <b>V</b>   | <b>PRACTICALS RELATED TO THE MODULE II and III</b>  |   | <b>30</b> |           |
|            | 1   | <b>Introduction to organic lab</b>  | 4         |           |
|            | 2   | 1. Distillation of Aniline, Limonene (from orange peels)<br>1. Purification of organic compounds by crystallization using the following solvents: a. Water b. Alcohol<br>2. Sublimation of a dicarboxylic acid/Naphthalene<br>3. Chromatographic separations – (any two)<br>a) Separation of a mixture of two amino acids paper chromatography.<br>b) Separation of a mixture of o-and p-nitrophenol or o-and p-aminophenol by thin layer chromatography (TLC)<br>4. TLC of Spinach | 20        |           |
|            | 3   | <b>Open ended</b><br>1. Drawing structures using softwares.<br>2. Column Chromatography<br>3. Teacher can select preparation of organic compound related to the topics in the theory like synthesis of aspirin, sanitizer, drugs etc  | 6         |           |

| Pre-requisites | Fundamental knowledge of chemistry principles and terminology. Understanding of basic organic chemistry concepts. Familiarity with chemical bonding and molecular structure. Proficiency in stoichiometry and reaction mechanisms.   |                  |                   |                    |             |
| Course Summary | This course provides a comprehensive overview of polymer chemistry, covering fundamental concepts, properties, synthesis techniques, and industrial applications of polymers. Students explore polymer classification, properties, polymerization techniques, processing methods, and the characteristics of various commercial polymers. By the course's conclusion, students will have gained essential knowledge in polymer chemistry and its practical applications. |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used           |
|-----|---|------------------|---------------------|---------------------------------|
| CO1 | Understand various classification of polymers and types of polymerisation methods   | U                | C                   | Instructor-created exams / Quiz |
| CO2 | Understand the important characteristics of polymers such as average molecular weight, glass transition temperature, viscoelasticity and degradation. | U                | F                   | Class test /Assignment / Quiz   |
| CO3 | Appreciate the importance of processing techniques  | U                | F                   | Class test /Assignment / Quiz   |

### Detailed Syllabus:

| Module     | Unit                             | Content   | Hours     | Marks     |
|------------|----------------------------------|---|-----------|-----------|
| <b>I</b>   | <b>Introduction to Polymers</b>  |   | <b>15</b> | <b>32</b> |
|            | 1                                | Polymers and macromolecules, Monomers, Homo and hetero polymers, Copolymers.  | 3         |           |
|            | 2                                | Classification based on origin (natural, semi-synthetic, and synthetic), Synthesis (addition and condensation), Structure (linear, branched chain, and cross-linked) intermolecular forces. | 3         |           |
|            | 3                                | Elastomers, Fibers, Thermoplastics, and Thermosetting polymers, Tacticity.  | 3         |           |
|            | 4                                | Types of Polymerization: Chain and step growth polymerizations, Free radical, Ionic, and Coordination polymerizations with mechanism, and its advantages.                                   | 4         |           |
|            | 5                                | Ziegler-Natta polymerization (mechanism expected).  | 1         |           |
|            | 6                                | Ring-opening & Group transfer polymerization (Mechanism not needed).  | 1         |           |
| <b>II</b>  | <b>Properties of Polymers</b>    |   | <b>10</b> | <b>22</b> |
|            | 7                                | Molecular weights of polymers: Average molecular weights, Number average, Weight average, Sedimentation average (Method of determination not required).                                     | 2         |           |
|            | 8                                | Viscosity average molecular weight, Determination of viscosity average molecular weight.  | 2         |           |
|            | 9                                | Polydispersity index and Molecular weight distribution, Molecular weight and Degree of polymerization.  | 2         |           |
|            | 10                               | Glass transition temperature, Definition, Factors affecting T <sub>g</sub> , Importance of T <sub>g</sub> .   | 2         |           |
|            | 11                               | Viscoelasticity of polymers (Basic concepts only).  | 1         |           |
|            | 12                               | Polymer Degradation: Basic idea of thermal, photo, and oxidative degradation of polymers.   | 1         |           |
| <b>III</b> | <b>Polymerisation Techniques</b> |   | <b>10</b> | <b>22</b> |

|           |  |  |           |           |
|-----------|--|--|-----------|-----------|
|           | 13   | Polymerization Techniques: Bulk, Solution, Suspension, Emulsion, Melt, Condensation, and Interfacial polycondensation polymerizations. | 5         |           |
|           | 14   | Polymer Processing: Calendering, Rotational molding, Compression, Injection molding, Blow molding, and Thermoforming.                  | 5         |           |
| <b>IV</b> | <b>Commercial Polymers</b>   |  | <b>10</b> | <b>22</b> |
|           | 15   | Commercial Polymers: Preparation, Structure, Properties, and Applications of: Polyolefins (HDPE, LDPE, PP, and PS).                    | 1         |           |
|           | 16   | Vinyl polymers (PVC, PVP, and EVA, Saran), Fluoropolymers (Teflon), Acrylic polymers (PAN and PMMA).                                   | 1         |           |
|           | 17   | Aliphatic polyamides (nylon 66 and nylon 6), Aromatic polyamides (kevlar).   | 1         |           |
|           | 18   | Polyester (terylene), Polycarbonate (lexan), Polyurethanes.  | 2         |           |
|           | 19   | Resins, Glyptal and Formaldehyde resins (UF, MF, and PF).  | 1         |           |
|           | 20   | Rubbers (natural rubber - Vulcanization, EPDM, BR, SBR, Nitrile rubber, Neoprene, Butyl rubber, and Silicone rubber).                  | 2         |           |
|           | 21   | Conducting polymers, Doping (conduction mechanism not required).   | 1         |           |
|           | 22   | Pollution due to plastics, Recycling of plastics, Plastic identification code.   | 1         |           |
| <b>V</b>  | <b>Practicals</b>  |  | <b>30</b> |           |
|           | Any Five of the following. <ol style="list-style-type: none"> <li>1. Identify everyday plastics by their physical properties</li> <li>2. Determination of density of polymers</li> <li>3. Effect of liquid on rubber</li> <li>4. Determine glass and filler content</li> <li>5. Determination of total solid content of latex</li> <li>6. Determination of dry rubber content of latex</li> <li>7. Determination of alkalinity of latex</li> <li>8. Determination of KOH number</li> </ol> Teacher can suggest determination of other properties of polymers other than mentioned above (Open ended) |  |           |           |

### Detailed Syllabus:

| Module     | Unit  | Content   | Hrs       | Marks     |
|------------|---|---|-----------|-----------|
| <b>I</b>   | <b>Fuel Chemistry</b>                       |   | <b>9</b>  | <b>20</b> |
|            | 1   | Review of energy resources (renewable and non-renewable -Clean Energy). Classification of fuels and their calorific value.  | 2         |           |
|            | 2   | Uses of coal (fuel and non fuel) in various industries and its composition  | 1         |           |
|            | 3   | Composition of crude petroleum, Refining and different types of petroleum products and their applications.  | 1         |           |
|            | 4   | Fractional Distillation (Principle and process), Cracking (Thermal and catalytic cracking)  | 1         |           |
|            | 5   | Elementary ideas on Non-petroleum fuels (CNG, LNG, bio-gas, fuels derived from biomass), clean fuels (wind, solar, tidal)   | 2         |           |
|            | 6   | Lubricants: Solid and semisolid lubricants, synthetic lubricants  | 2         |           |
| <b>II</b>  | <b>Food Chemistry</b>                       |   | <b>12</b> | <b>26</b> |
|            | 7   | Food additives: Functional food additives, Food colours-permitted and non permitted – adulteration and Toxicology.  | 3         |           |
|            | 8   | Flavours – natural and synthetic – Soft drinks – formulation. Health drinks.  | 3         |           |
|            | 9   | Artificial sweeteners – Artificial ripening of fruits and its side effects.   | 1         |           |
|            | 10  | Modern Food Habits: Definition and health effects of fast foods, instant foods, dehydrated foods and junk foods. Harmful effects of modern food habits.                     | 3         |           |
|            | 11  | Spices: Introduction, (turmeric, chilli, coriander, pepper, cardamom, cloves), general extraction procedure, applications   | 2         |           |
| <b>III</b> | <b>Cleansing agents, Dyes and Cosmetics</b> |   | <b>18</b> | <b>39</b> |
|            | 12  | Cleansing Agents: Soaps – Hard and soft soaps – Alkali content – TFM – Detergents (classification) – Cleaning action – Advantages and disadvantages of soaps and detergents | 3         |           |

|           |                                   |   |           |           |
|-----------|-----------------------------------|---|-----------|-----------|
|           | 13                                | Shaving creams-Ingredients and functions, Shampoos – Different kinds of shampoos (Anti-dandruff, anti-lice, herbal and baby shampoos).  | 2         |           |
|           | 14                                | Tooth paste: composition and preparation.   | 1         |           |
|           | 15                                | Dyes: Definition – Requirements of a dye – Theories of colour and chemical constitution – Classification based on structure and mode of application to the fabric . Industrial method of dyeing                                 | 3         |           |
|           | 16                                | Cosmetics: Hair dye: Types, chemicals used and its harmful effects.   | 2         |           |
|           | 17                                | Face and skin creams: Types, ingredients and functions. Antiperspirants, sun screen, Face and skin powders, nail polishes, lipsticks, eyebrow pencils and eye liners (ingredients and functions) – Harmful effects of cosmetics | 3         |           |
|           | 18                                | Perfumes: Science of smell, history of fragrance, fragrance sources, natural products and aroma chemicals used in fragrances,   | 2         |           |
|           | 19                                | Fragrance applications in personal care and household products, safety and regulations of fragrance, emotional and psychological effects of odours.   | 2         |           |
|           |                                   |   |           |           |
| <b>IV</b> | <b>Fertilizers and Pesticides</b> |   | <b>6</b>  | <b>13</b> |
|           | 20                                | Fertilizers: Essential nutrients for plants – NPK value – Natural and synthetic fertilizers   | 2         |           |
|           | 21                                | Nitrogenous, phosphatic and potash fertilizers (examples) – Impact of excessive use of fertilizers on environment – Biofertilizers.   | 2         |           |
|           | 22                                | Pesticides: Classification – Insecticides, herbicides, rodenticides and fungicides (definition and examples only) – Non-degradable pesticides   | 2         |           |
| <b>V</b>  | <b>Practical</b>                  |   | <b>30</b> |           |
|           | 1                                 | Test for adulteration in selected food products ( 5 experiments)  | 15        |           |
|           | 2                                 | Determination of Acid value, ester value and saponification value of oils, TFM of soaps   | 7         |           |
|           | 3                                 | Preparation of pain balms, lip balms, soaps, liquid detergent, shampoo, hand sanitizer and disinfectants  | 8         |           |
|           |                                   |   |           |           |

| Pre-requisites | Concept of polymers. Use of polymers. Knowledge on synthetic polymers and their application.   |                     |                      |                       |             |
| Course Summary | This course is intended to provide basic knowledge about commercial polymers. It deals with types, techniques of preparation and characterization of plastics, rubber and fibre materials. The applications of these materials in daily life, engineering and biomedical fields have been emphasized. The students are exposed to the problems of polymer waste management and the strategies developed to minimize plastic pollution. |                     |                      |                       |             |

**Course Outcomes (CO):**

| CO  | CO Statement  | Cognitive Level* | Knowledge Category# | Evaluation Tools used           |
|-----|---|------------------|---------------------|---------------------------------|
| CO1 | Understand the basic principles of polymer chemistry, including polymerization mechanisms, molecular structure, and polymer characterization techniques.  | U                | C                   | Instructor-created exams / Quiz |
| CO2 | Students should become familiar with the major families of commercial polymers, such as polyethylene, polypropylene, polyvinyl chloride (PVC), polystyrene, polyethylene terephthalate (PET), and others. | R,U              | F                   | Class test /Assignment / Quiz   |
| CO3 | Students should gain awareness of the environmental impact of polymers and explore sustainable practices in polymer production, usage, and disposal. They should understand concepts such as              | R, U, Ap         | F                   | Class test /Assignment / Quiz   |

|  |  |          |   |                               |
|--|--|----------|---|-------------------------------|
|  | biodegradability, recycling, and the development of eco-friendly polymers.   |          |   |                               |
| CO4  | Students should be able to correlate the molecular structure of thermoplastics with their physical, mechanical, thermal, electrical, and chemical properties. They should understand how these properties influence the selection of thermoplastics for specific applications. | R, U, Ap | C | Class test /Assignment / Quiz |
| CO5  | Students should learn about the synthesis methods and curing mechanisms used for thermosetting polymers, including techniques such as condensation polymerization, addition polymerization, and crosslinking reactions.  | R, U     | P | Class test /Assignment / Quiz |
| CO6  | Students should be able to classify elastomers based on their chemical structure, polymerization mechanisms, and properties. They should also learn methods for identifying different types of elastomers  | R, U     | P | Class test /Assignment / Quiz |
| CO7  | Develop practical skill in the preparation of various types of polymers  | Ap       | P | Viva/ Practical Skill         |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) |  |          |   |                               |

**Course Outcomes (CO):**

| CO  | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used            |
|-----|--|------------------|---------------------|----------------------------------|
| CO1 | Students should gain insight into the diverse range of applications and uses of natural fibers across industries such as textiles, apparel, home furnishings, agriculture, packaging, construction, and craft industries | R, U, Ap         | C                   | Class test /Assignment / Quiz    |
| CO2 | Students will conduct a comparative environmental analysis between natural and synthetic fibers and they will evaluate the life cycle environmental impacts of both fiber types  | Ap,An, E         | C,M                 | Class test /Assignment / Seminar |
| CO3 | Students will become familiar with basic terminology related to adhesives, including terms such as viscosity, cure time, tack, cohesive strength, adhesive failure, and cohesive failure                                 | U                | C                   | Class test /Assignment / Quiz    |
| CO4 | Students will explore theories of adhesion, including mechanical interlocking, electrostatic attraction, diffusion, and chemical bonding theories. They will   | U, Ap            | C                   | Class test /Assignment / seminar |

|   |  |        |     |                                  |
|---|--|--------|-----|----------------------------------|
|   | understand how these theories contribute to the understanding of adhesive bonding at the molecular level.  |        |     |                                  |
| CO5   | Students will develop a comprehensive understanding of pigments and paints, including their composition, properties, and applications in various industries such as coatings, plastics, printing, and cosmetics  | U, Ap  | C   | Class test /Assignment / seminar |
| CO6   | Develop a comprehensive understanding of food packaging materials, including conventional materials (e.g., plastics, metals, glass) and emerging edible and biobased materials. They will learn about the properties, functionalities, and applications of different packaging materials in the food industry  | R,U    | C   | Class test /Assignment / Viva    |
| CO7   | Develop a thorough understanding of polymers used in biomedical applications, including their chemical structures, properties, and biocompatibility and students will learn about polymer types such as biodegradable polymers, hydrogels, elastomers, and nanocomposites  | R,U,Ap | C   | Class test /Assignment / seminar |
| CO8   | Students will develop a thorough understanding of the properties of polymers relevant to aerospace applications, including mechanical properties (e.g., strength, stiffness, toughness), thermal properties (e.g., heat resistance, thermal expansion), chemical resistance, and durability in harsh environments (e.g., UV radiation, moisture, space vacuum) | R,U,Ap | C,M | Class test /Assignment / Quiz    |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)<br>Metacognitive Knowledge (M) |  |        |     |                                  |

### Detailed Syllabus:

| Module | Unit                       | Content  | Hrs | Mark |
|--------|----------------------------|--|-----|------|
| I      | Polymers in fiber industry |  | 12  | 24   |
|        | 1                          | Harvesting, extraction, processing, and characteristics of natural fibers (cotton, wool, silk, jute, flax).                                      | 2   |      |
|        | 2                          | Application and uses of natural fibers in textiles. Regenerated cellulose fibers-viscose,tencel, cellulose acetate and triacetate (Mention only) | 2   |      |

|            |    |  |           |           |
|------------|----|--|-----------|-----------|
|            | 3  | Polyester, nylon, acrylic, polypropylene, polyethylene, acetate, Lycra and their manufacturing processes. Properties and advantages of synthetic 2 fibers.                                       | 3         |           |
|            | 4  | Comparison with natural fibers in terms of properties and applications. Environmental considerations in synthetic fiber production.  | 2         |           |
|            | 5  | Other fiber forming materials -glass, ceramic, carbon and metal. Innovations in fiber technology. Sustainable practices in textile fibers.   | 3         |           |
|            |    | <b>Polymers in adhesives coating</b>   | <b>15</b> | <b>30</b> |
|            | 6  | Adhesives-adhesive bonding, advantages-adhesive classification basic terminology, theories of adhesion-wettability   | 2         |           |
|            | 7  | Performance of adhesives - shear, peel and cleavage properties, factors affecting adhesive performance   | 2         |           |
|            | 8  | Design of adhesive joints, selection of adhesives. Structural adhesive, types - epoxy, urethane, acrylic, phenolic and high temperature and PVC plastisol types                                  | 2         |           |
| <b>II</b>  | 9  | Advantages and disadvantages, anaerobic adhesives, cyanoacrylates, hot melt adhesive, pressure sensitive adhesives, silicone adhesives, water based adhesives, inorganic adhesives               | 2         |           |
|            | 10 | Pigments and paints, inorganic pigments & organic pigments, extenders paint preparation factors affecting dispersion, preparation of pigment dispersion  | 2         |           |
|            | 11 | Surface preparation and paint application techniques. Paint properties and their evaluation, mechanism of film formation factors affecting coating properties, methods used for film preparation | 3         |           |
|            | 12 | Carrier properties, optical properties, ageing properties, rheological properties and adhesion properties of coatings.   | 2         |           |
|            |    | <b>PACKAGING APPLICATIONS</b>  | <b>10</b> | <b>22</b> |
|            | 13 | Edible and biobased food packaging materials, Edible film and coating,   | 2         |           |
| <b>III</b> | 14 | Polysaccharide based coatings, Lipid based coatings, Protein based coating, First, Second and Third biobased packaging materials.  | 2         |           |
|            | 15 | Permeability of thermoplastic polymers, Multilayer films, Processing, Deteriorative reaction in foods, Enzyme reactions, Chemical reactions,   | 2         |           |
|            | 16 | Physical change, Biological change, shelf life of foods, Factors controlling 2 shelf life.   | 2         |           |

|    |    |   |            |           |
|----|----|---|------------|-----------|
|    | 17 | Packaging of dairy products, Packaging of cereals, snack foods and confectionary, Packaging of beverages, Comparison of polymer packaging with paper, metal and glass materials   | 2          |           |
| IV |    | <b>POLYMERS IN BIOMEDICAL APPLICATION</b>   | <b>11</b>  | <b>22</b> |
|    | 18 | Definition of biomedical Polymers and its classification, Criteria for the Selection of Biomedical Polymers   | 2          |           |
|    | 19 | Properties of biomedical Polymers, : Polymers for biomedical applications– Polymers in dentistry  | 2          |           |
|    | 20 | polymers in Tissue adhesives , Dialysis Membrane  | 2          |           |
|    | 21 | Polymers in Blood oxygenators, Bone cement, Prostheses  | 2          |           |
|    | 22 | polymers in Biodegradable sutures, Control drug delivery systems  | 3          |           |
| V  |    | <b>POLYMERS IN AEROSPACE APPLICATION</b>  | <b>12</b>  |           |
|    | 24 | Requirement of polymer characteristics for in space usage, polymers in aerospace applications: thermal blanket, helmet,   | 4          |           |
|    | 25 | polymers in aerospace applications: Adhesive, Space Suits   | 3          |           |
|    | 26 | polymers in aerospace applications: Eelectronic applications, structural applications<br><br>Important plastics used in Aerospace industry (Thermosetting polyimide, Polyetheretherketone, Polyamide-imide, Polychlorotrifluoroethylene, PTFE | 2<br><br>3 |           |

**Detailed Syllabus:**

| Module     | Unit   | Content  | Hrs       | Marks     |
|------------|--|--|-----------|-----------|
| <b>I</b>   | <b>Analytical techniques in Chemistry</b>        |  | <b>8</b>  | <b>15</b> |
|            | 1  | An introduction to analytical methods in chemistry- concentration terms- Molarity, Molality, Normality, v/v, w/v, ppm and ppb, Dilution of solutions, standard solutions | 4         |           |
|            | 2  | Principles of Volumetric methods in water Analysis- Acid-base titrations, Redox titrations,  | 2         |           |
|            | 3  | complexometric titration and precipitation titrations  | 2         |           |
| <b>II</b>  | <b>Instrumental Methods of Water Analysis</b>    |  | <b>9</b>  | <b>18</b> |
|            | 4  | pH meter, Conductivity meter, Turbidity meter, Flame photometer, Colourimeter,   | 2         |           |
|            | 5  | Atomic absorption spectrophotometer (AAS), GCMS  | 2         |           |
|            | 6  | Ion-selective electrodes, Isotopic analysis  | 1         |           |
| <b>III</b> | <b>Water Purification</b>                        |  | <b>9</b>  | <b>18</b> |
|            | 7  | Water resources: ground water and surface water, Importance of water, Water quality- water cycle,  | 1         |           |
|            | 8  | Distribution of water -Water scarcity, Common water quality problems   | 1         |           |
|            | 9  | Potable Water: Pre-treatment, coagulation, filtration, disinfection,   | 2         |           |
|            | 10   | Water storage supply, Demineralization & desalination  |           |           |
|            | 11   | Water softening methods-Lime soda process- Zeolite process, Ion exchange method  | 2         |           |
|            | 12   | Sewage waste water treatment-Primary, Secondary and tertiary treatment & sewage water treatment plants in Kerala   | 2         |           |
|            | 13   | Desalination of brackish water-Electrodialysis-Reverse Osmosis   | 1         |           |
| <b>IV</b>  | <b>Determination of Water quality parameters</b> |  | <b>10</b> | <b>19</b> |
|            | 14   | Water quality monitoring   | 1         |           |
|            | 15   | Water Quality parameters- Odour, Temperature, Colour, Turbidity, pH, Total Dissolved Solids (TDS), Conductivity-   | 2         |           |
|            | 16   | Experimental methods for the estimation of Alakalinity, Hardness of water  | 2         |           |
|            | 17   | Estimation of anions and cations from dissolved minerals   | 1         |           |
|            | 18   | Experimental methods for the estimation of Biological parameters- DO, BOD, COD, Microbiological parameters,  | 2         |           |
|            | 19   | Water quality standards: drinking water- WHO guidelines- Water quality standards by BIS, IS-10500-   | 2         |           |

|           |   |   |          |  |
|-----------|---|---|----------|--|
|           |   | 2012 on drinking water specification,17482-2020-on drinking water supply management system    |          |  |
| <b>IV</b> | <b>Water Quality Assessment (Open Ended)</b>                            |   | <b>9</b> |  |
|           | The following water quality assessment may be through hands on training |   |          |  |
|           | 1   | Determination of -temperature, pH, conductivity- Instrumental Methods                         |          |  |
|           | 2   | Determination of turbidity using Turbidity meter  |          |  |
|           | 3   | Determination of total dissolved solids (TDS)- Gravimetric/Instrumental method                |          |  |
|           | 4   | Determination of carbonate and bicarbonate using titration method (Acidimetry & Alkalimetry), |          |  |
|           | 5   | Determination of Ca, Mg, Total hardness - Complexometry                                       |          |  |
|           | 6   | Determination of Ammonia and iron-Colorimetry   |          |  |
|           | 7   | Determination of Dissolved Oxygen (DO)- Winkler's Method-Iodometry                            |          |  |
| 8         | Determination of Chloride- Argentometry                                 |   |          |  |

### Detailed Syllabus:

| Module     | Unit  | Content   | Hrs       | Marks     |
|------------|---|---|-----------|-----------|
| <b>I</b>   | <b>Science Communication to Public</b>                  |   | <b>8</b>  | <b>15</b> |
|            | 1   | Importance of effective communication in academia and beyond and different forms of scientific communication  | 2         |           |
|            | 2   | Tailoring Science for Public Audiences and adapting scientific language for non-experts,  | 2         |           |
|            | 3   | Social media strategies for scientists, Science Journalism, Content Writing.  | 2         |           |
|            | 4   | Interactive Public Presentations  | 1         |           |
|            | 5   | Techniques for effective public speaking  | 1         |           |
| <b>II</b>  | <b>Technical skills for Academic Writing</b>            |   | <b>9</b>  | <b>18</b> |
|            | 6   | Structure and organization of scientific articles,  | 2         |           |
|            | 7   | Paper formatting using MS Office, writing chemical equations and formulas, Understanding citation styles, reference management software   | 3         |           |
|            | 8   | AI tools for literature review, content development, editing and data analysis.   | 2         |           |
|            | 9   | Issues in scientific writing (plagiarism, authorship, ghostwriting, reproducible research).   | 2         |           |
| <b>III</b> | <b>Entrepreneurial Skills for Scientists</b>            |   | <b>9</b>  | <b>18</b> |
|            | 10  | Introduction to Entrepreneurship in Science, identifying opportunities for entrepreneurship in chemistry  | 2         |           |
|            | 11  | Basics of intellectual property rights, Understanding the patenting process   | 4         |           |
|            | 12  | Overview of funding sources for entrepreneurial ventures, strategies for successful grant applications  | 3         |           |
| <b>IV</b>  | <b>Practical: Technical skills for Academic Writing</b> |   | <b>10</b> | <b>19</b> |
|            | 13  | Presentation of data in tables, figures and plots using excel / google sheet and using equations and functions in excel   | 1         |           |
|            | 14  | Drawing 2D chemical structures using ChemSketch or Chemdraw   | 1         |           |
|            | 15  | Creating 3D models of chemical structures for presentations and publications using Avogadro and JMOL; designing 3D molecular structures, measurement of bond length, bond angles and dihedral angles, | 2         |           |
|            | 16  | Visualizing atomic and molecular orbitals and analyse geometric and conformational isomers using JMOL   | 2         |           |
|            | 17  | Exploring crystal structures, unit cell and symmetry operations in molecules using JMOL   | 1         |           |
|            | 18  | Exploring the structure of protein and nucleic acid using JMOL  | 1         |           |

|          |   |   |          |  |
|----------|---|---|----------|--|
|          | 19  | Creating scientific illustrations and diagrams (Inkscape, canva), video stories to communicate scientific information (Openshot, Kdenlive), | 2        |  |
| <b>V</b> | <b>Open Ended: Practical Application and Project Work</b> |   | <b>9</b> |  |
|          | 1   | Case studies of successful scientific entrepreneurs   | 3        |  |
|          | 2   | Public Communication Simulation: Role-playing scenarios for engaging with the public and media  | 2        |  |
|          | 3   | Entrepreneurial Pitch Practice: Crafting and presenting a pitch for a scientific entrepreneurial idea                                       | 2        |  |
|          | 4   | Writing and Presenting a Mock Research Proposal: Students develop a proposal integrating academic writing and entrepreneurial concepts      | 2        |  |

| Course Summary | <p>This course delves into the scientific principles behind everyday items such as soaps, detergents, shampoos, and cosmetics. Students learn about the chemistry of manufacturing, formulation techniques, and quality control procedures. Topics include how ingredients like linear alkyl benzene and sodium lauryl sulfate are synthesized, as well as the creation of specialized products like anti-dandruff shampoos and herbal soaps. Environmental impact and regulatory compliance are also covered. Through theory and practical lab work, students gain a solid understanding of the chemistry driving these commonly used consumer goods.</p> |                  |                   |                    |             |

**Course Outcomes (CO):**

| CO  | CO Statement   | Cognitive Level* | Knowledge Category# | Evaluation Tools used           |
|-----|--|------------------|---------------------|---------------------------------|
| CO1 | Understand the process of making soaps from oils and fats, including the formulation of different types like herbal and medicated soaps. | U                | C                   | Instructor-created exams / Quiz |
| CO2 | Identify the ingredients and functions used in detergent production, comparing their effectiveness with traditional soap.                | U                | F                   | Class test /Assignment / Quiz   |

|  |  |    |   |                               |
|--|--|----|---|-------------------------------|
| CO3  | Understand the components in anti-dandruff and herbal shampoo, and their safety standards.   | U  | F | Class test /Assignment / Quiz |
| CO4  | Analyze cosmetic preparation ingredients and functions to ensure the production of safe and effective products like face creams and nail polishes. | An | C | Class test /Assignment / Quiz |
| CO5  | Evaluate the environmental impact of consumer products, proposing sustainable practices to minimize harm.  | E  | C | Class test /Assignment / Quiz |
| CO6  | Analyze the need for innovative solutions to challenges in consumer product chemistry, fostering creativity and improvement in the industry.       | An | F | Class test /Assignment / Quiz |
| * - Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)<br># - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M) |  |    |   |                               |

| Pre-requisites | Fundamental knowledge of chemistry<br>Chemical processes that occur in the environment, including those related to pollution<br>Basic understanding of environmental chemistry and the impact of solid waste on ecosystems and human health   |                  |                   |                    |             |
| Course Summary | This course provides an overview of solid waste management principles, practices, and policies. It covers the generation, collection, transportation, and disposal of solid waste, with a focus on sustainable waste management strategies. The course includes a discussion of waste management strategies for promoting waste reduction, reuse, and recycling. Through this course, the students can explore best practices for sustainable waste management, including waste minimization, source separation, and the global standards for waste management. |                  |                   |                    |             |

### Detailed Syllabus:

| Module     | Unit   | Content   | Hrs       | Mark      |
|------------|--|---|-----------|-----------|
| <b>I</b>   | <b>Introduction to Environmental Chemistry</b> |   | <b>9</b>  | <b>18</b> |
|            | 1  | Environmental segments-Atmosphere, Hydrosphere, Lithosphere, Biosphere  | 2         |           |
|            | 2  | Interaction between different environmental spheres Concept of ecosystem, abiotic and biotic components   | 2         |           |
|            | 3  | Composition of Air, Water and Soil  | 2         |           |
|            | 4  | Environmental pollution – Concepts and definition – Pollutant, contaminant, receptor and sink   | 1         |           |
|            | 5  | Classification of pollutants – Global, regional, local, persistent and non-persistent pollutants.   | 1         |           |
|            | 6  | Types of pollution  | 1         |           |
| <b>II</b>  | <b>Air Pollution</b>                           |   | <b>9</b>  | <b>18</b> |
|            | 7  | Tropospheric pollution – Gaseous air pollutants – Hydrocarbons, oxides of sulphur, nitrogen and carbon (Elementary idea only)   | 2         |           |
|            | 8  | Global warming, green house effect, acid rain   | 1         |           |
|            | 9  | Particulates – Smog: London smog and photochemical smog –   | 2         |           |
|            | 10   | stratospheric pollution - depletion of ozone layer, chlorofluorocarbons - Automobile pollution.   | 2         |           |
|            | 11   | Control of air pollution  | 2         |           |
| <b>III</b> | <b>Water Pollution</b>                         |   | <b>10</b> | <b>20</b> |
|            | 12   | Impurities in water – cause of pollution – natural and anthropogenic – Marine water pollution – Underground water pollution.  | 1         |           |
|            | 13   | Source of water pollution – Industrial waste, Municipal waste, Agricultural waste, Radioactive waste, Petroleum, Pharmaceutical, heavy metal, pesticides, soaps and detergents. | 2         |           |
|            | 14   | Types of water pollutants: Biological agents, physical agents and chemical agents – Eutrophication- biomagnification and bioaccumulation.                                       | 2         |           |

|           |  |   |          |           |
|-----------|--|---|----------|-----------|
|           | 15   | Water quality parameters: DO, BOD, COD, alkalinity, hardness, chloride, fluoride and nitrate. Toxic metals in water and their effects: Cadmium, lead and oil pollution in water.  | 3        |           |
|           | 16   | Water pollution control methods   | 2        |           |
| <b>IV</b> | <b>Soil, Thermal, and Radioactive Pollutions</b> |   | <b>8</b> | <b>14</b> |
|           | 18   | Soil pollution: Sources by industrial and urban wastes. Non-degradable, degradable and biodegradable wastes. Hazardous waste.   | 2        |           |
|           | 19   | Pollution due to plastics, pesticides, biomedical waste and <i>e-waste</i> (source, effects and control measures) – Control of soil pollution - Solid waste Management – Open dumping, Landfilling, Incineration, Re-use, reclamation, recycle, composting. | 3        |           |
|           | 20   | Thermal pollution – definition, sources, harmful effects and prevention.  | 1        |           |
|           | 21   | Radioactive pollution (source, effects and control measures) – Hiroshima, Nagasaki and Chernobyl accidents (brief study).   | 2        |           |
| <b>V</b>  | <b>Open Ended Module: Environmental issues</b>   |   | <b>9</b> |           |
|           | 1  | Environment and society<br><br>Pollution case studies: Chernobyl disaster, Bhopal tragedy, Endosulfan disaster in Kerala (brief study) etc.   |          |           |

### Detailed Syllabus:

| Module     | Unit  | Content   | Hrs       | Marks     |
|------------|---|---|-----------|-----------|
| <b>I</b>   | <b>Chemistry in Biological Systems &amp; Forensic Chemistry</b> |   | <b>12</b> | <b>22</b> |
|            | 1   | Vitamins and Minerals: Name, source, function and deficiency diseases.  | 2         |           |
|            | 2   | Enzymes - Classifications, characteristics, examples.   | 1         |           |
|            | 3   | Hormones - Sex hormones - example, function. Pheromones.  | 2         |           |
|            | 4   | Brain chemicals and human mood variations   | 1         |           |
|            | 5   | General discussion of poisons with special reference to mode of action of cyanide, organophosphates and snake venom.  | 2         |           |
|            | 6   | Detection of finger print, blood stain, semen, Breath analyzer  | 2         |           |
|            | 7   | Sport doping-Steroids-Anabolic agents, Stimulants, Diuretics  | 2         |           |
| <b>II</b>  | <b>Chemistry and Agriculture</b>                                |   | <b>6</b>  | <b>12</b> |
|            | 8   | Essential nutrients for plants – NPK value<br>Chemical composition of soil, Soil enrichment   | 1         |           |
|            | 9   | Fertilizers- natural, synthetic, mixed, NPK fertilizers. Excessive use of fertilizers and its impact on the environment. Bio fertilizers.                   | 2         |           |
|            | 10  | Pesticides: Classification – Insecticides, herbicides, rodenticides and fungicides (definition and examples only) – Non-degradable pesticides               | 2         |           |
|            | 11  | Pesticide pollution and its impact on environment – Endosulfan disaster in Kerala (brief study).  | 1         |           |
| <b>III</b> | <b>Cleansing agents and cosmetics</b>                           |   | <b>9</b>  | <b>18</b> |
|            | 12  | Soaps – Hard and soft soaps – Alkali content – TFM – Detergents (classification) – Cleaning action – Advantages and disadvantages of soaps and detergents – | 3         |           |
|            | 13  | Shampoos: Ingredients and functions – Different kinds of shampoos (Antidandruff, anti-lice, herbal and baby shampoos).                                      | 1         |           |
|            | 14  | Tooth paste: Composition and health effects.<br><br>Hair dye: Chemicals used and its harmful effects.   | 1         |           |
|            | 15  | Face and skin powders:<br>Types, ingredients and functions. Cleansing creams: Cold creams, vanishing creams and bleach creams.                              | 2         |           |

|           |                                 |   |          |           |
|-----------|---------------------------------|---|----------|-----------|
|           | 16                              | Perfumes, antiperspirants, sun screen preparations, nail polishes, lipsticks, rouges, eyebrow pencils and eye liners (ingredients and functions) – Harmful effects of cosmetics.                      | 2        |           |
| <b>IV</b> | <b>Pharmaceuticals and Dyes</b> |   | <b>9</b> | <b>18</b> |
|           | 17                              | Drug: Chemical name, generic name and trade names with examples.  | 1        |           |
|           | 18                              | Terminology: Prodrug, pharmacy, pharmacology, pharmacophore, pharmacognosy, pharmacodynamics and pharmacokinetics (elementary idea only).   | 2        |           |
|           | 19                              | Antipyretics, analgesics, antacids, antihistamines, antibiotics, antiseptics, disinfectants, anaesthetics, tranquilizers, narcotics, antidepressants and psychedelic drugs (definition and examples). | 2        |           |
|           | 20                              | Dyes: classification based on constitution, application, examples, uses.  | 2        |           |
|           | 21                              | Dyes: Requirements of a dye – Classification based on mode of application to the fabric –   | 1        |           |
|           | 22                              | Applications of dyes (general study). Ancient and modern colours – Mention of indigo and alizarin.  | 1        |           |
| <b>V</b>  |                                 | <b>Food Chemistry (OPEN ENDED)</b>  | <b>9</b> |           |
|           | 23                              | Common adulterants<br>Food Additives:<br>Artificial sweeteners – Taste enhancers<br>Artificial ripening of fruits and its side effects.<br>Modern Food Habits:  |          |           |
